PRIZE COMPETITIONS.

The prize for the April Competition is awarded to "Eutyichides," and the second place to "W.L.B.H."

The winner of the March Competition is Miss Myra Dobson, 18 Victoria Road, Exmouth.

EXTRACT FROM "L'APPEL AU SOLDAT."

BY EUTYCHIDES.

A reddish road, lined with pear trees and apple trees in regular alternation, led the travellers the whole length of the Moselle valley (a very wide valley here and important by reason of its blast-furnaces) to Thionville, which still wears a martial aspect, and is cramped so tightly by engirdling walls that from one and the same spot on its tiny central square the town's three fortified gates can be seen, and each bugle call is easily heard by all its inhabitants, trained as they are to understand such trumpetings.

It is unfortunate that romantic writers who reveal to us in vivid phrases the great secret of the melancholy inspired by woods and ocean and by the spacious meadows of Central France, have known nothing of these small garrisoned towns in the East, and that atmosphere of theirs, so admirably fitted for moulding character—nothing of the clarion's continuous sound from morn to eve, of the flag and the general, of strolls on the rampart, or that burst of warlike music, the tattoo, crashing out suddenly every evening and suggesting an apotheosis. Oh! those splendid drummers, emancipated by a slight movement of the long cane at eight o'clock, and then plunging into the streets with the whole population behind them! This theatrical and unvarying routine made a deep impression upon youths brought up near fortifications of the Vauban type. It turned them into heroes and aspirers after a glorious death. There we have a French soul-state which is passing away without having received its literary expression.

The fortifications of Thionville are no longer anything more than recreation-grounds planted charmingly with oaks and diversified by kiosks and little super-imposed terraces. 1870 has transformed Lorraine's landscapes as well as its behaviour.

When the populace lost contact with the soldier—a Prussian soldier now, and one, moreover, who performs his manœuvres in forts closed against public curiosity—those laboratories of the military spirit ceased to exist. However, they have provided officers who are all of one type, conspicuously honourable, scornful of fanfaronade, realistic and moral—and in such numbers that this discipline seems destined to survive the conditions by which it was produced. It will remain one of the stones of French fashioning when the Lorraine quarries from which it was extracted have completely disappeared beneath German embankments.

We classify the 56 versions received as follows:—

Class I.—(a) Eutyichides, W.L.B.H., Penguin, Benediction, Mondham, Taugenichts.

(b) S.F.X., Bésigne, E.J.A.G., Chingleput, C.R.C., Swallow, Menevia.

Class II.—Adrienne, L.A.C., Maisyfed, Nibbidard, Tradles, Oldmarch, Puck, Leander, Beda, Exilée, Dolly Varden, Emile, Lise, Back Number, Dinkie, M.V., Woodlea, N.S., Ilex, M.A.H., Survey, D.N.B., Griselda, Melon Pie, Little Tich, L.M.B., Esse quam videri.

Class III.—Ally, Fuzzy-Wuzzy, Kappa, Anatole, Pierrelatte, Kit, C.S., No Name, Faith, Brook Green, Jack, Hibernia, Harold, Philatton, Emil Jay, Miffy, Erwartung.

Class IV.—Mopsa, Marjorie, Danny.

BY THE PRIZE EDITOR.

Along the valley of the Moselle, which is here of great breadth and of some importance owing to its blast furnaces, a reddish-coloured road, lined with pear trees and apples in alternation, led the travellers to Thionville—Thionville that is still a warrior-town, and so closely girdled in by its belt of walls that from a certain point in its little central square its three military gates are visible, and that a single bugle is easily heard by all its inhabitants, whose ears have long been trained to understand its blasts.

It is a pity that the writers of the romantic school who

THE CARSON-SMITH MATHEMATICAL SERIES

By **G. ST. L. CARSON, M.A., M.Sc.**, Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and **DAVID EUGENE SMITH, Ph.D.**, Professor of Mathematics in Teachers' College, Columbia University.

The Carson-Smith Mathematical Series provides courses in Algebra and Geometry which are admirably adapted to the requirements of modern mathematical education. While retaining those features which in the past conduced to success in mathematics teaching, they incorporate those modern methods which not only vitalize the subject of mathematics for the pupil, but lead him to a thorough understanding and appreciation of mathematical principles and of their application in everyday life.

REDUCTION IN PRICES.

PLANE GEOMETRY.

Part I.	266 pages.	3s. net.
Part II.	216 pages.	3s. net.
Complete.	482 pages.	5s. 6d. net.

ELEMENTS OF ALGEBRA.

Part I.	340 pages.	3s. 6d. net.
Part II.	214 pages.	3s. net.
Parts I and II.	538 pages.	5s. 6d. net.

NOTE.—There are at present in the press editions of Part I of each of the above books divided into two sections. Each section will contain the approximate amount of matter requisite for a year's work.

Part I of the **Plane Geometry** will be divided as follows:—

Section I. First Ideas of Geometry. (96 pages.)

Section II. Formal Geometry and the substance of Euclid I and II. (176 pages.)

The two sections of **Part I** of the **Elements of Algebra** will consist of 176 and 184 pages respectively.

NUMBER STORIES OF LONG AGO.

By **DAVID EUGENE SMITH.** 142 + 14 pages. Illustrated. 2s. 9d. net.

This book gives, in the form of stories told to children, a brief history of the science of numeration in different countries and ages. It tells, among other things, of the world's attempts to count, and of the methods of writing numbers adopted by the people of the ancient world; describes the evolution of the modern adding machine from the Roman *abacus*, and narrates how the children of long ago multiplied, divided, and wrote fractions. The book is a mine of information on a subject which has an important place in every child's school life, and on this account will interest both the pupil and his teacher. It contains many illustrations, eight of which are in colour, and a collection of numerous old number puzzles.

BOOKS SUITABLE FOR CLASS USE SENT ON APPROVAL TO TEACHERS.

GINN AND COMPANY,

7 QUEEN SQUARE, SOUTHAMPTON ROW, LONDON, W.C.1.

expressed in such vivid language the great secret of the melancholy of the woods, the sea, and the meadows of central France, knew nothing of the little military towns of the East whose atmosphere was so well-fitted to mould character; knew nothing of the bugle sounding all day long, the flag, the general, the walks on the rampart, and every evening the sudden military uproar of the "Retreat," bursting out in an apotheosis, as it were, of the Army. Ah! those fine drummers swinging off at eight o'clock at a short movement of the big cane, and plunging into the crowd of the streets with the whole population behind them! This discipline, monotonous yet dramatic, so penetrated the minds of the lads who grew up in these Vauban fortresses that it made them heroes and inspired them with the love of a glorious death. That is a phase of the French soul which is passing away without having found any expression in literature.

The fortifications of Thionville are now nothing more than walks, pleasantly planted with oaks, with kiosks here and there, and formed in low terraces rising one above the other. The year 1870 transformed the landscapes of Lorraine no less than its habits of life. From the moment that the population lost contact with the soldier, who was now a Prussian, and besides performed his exercises in forts closed to the public gaze, these nursery-beds of the military spirit ceased to exist. Yet they have produced so many officers, all of the same type, men in the highest degree honourable, contemptuous of show, business-like and moral, that this discipline seems destined to survive the conditions that gave its birth; it will remain one of the foundation stones of the national character when the quarries in Lorraine from which it was hewn have entirely disappeared beneath the earthworks of the Germans.

A Prize of Two Guineas is offered for the best translation of the following extract from the "Beschluss" of Kant's "Kritik der praktischen Vernunft."

Zwei Dinge erfüllen das Gemüt mit immer neuer und zunehmender Bewunderung und Ehrfurcht, je öfter und anhaltender sich das Nachdenken damit beschäftigt: der bestirnte Himmel über mir und das moralische Gesetz in mir. Beide darf ich nicht als in Dunkelheiten verhüllt, oder in Überschwenglichen, ausser meinem Gesichtskreise suchen und bloß vermuten; ich sehe sie vor mir und verknüpfe sie

unmittelbar mit dem Bewusstsein meiner Existenz. Das erste fängt von dem Platze an, den ich in der äussern Sinnenwelt einnehme, und erweitert die Verknüpfung, darin ich stehe, ins unabsehlich Grosze mit Welten über Welten, und Systemen von Systemen, überdem noch in grenzenlose Zeiten ihrer periodischen Bewegung, deren Anfang und Fortdauer. Das zweite fängt von meinem unsichtbaren Selbst, meiner Persönlichkeit, an und stellt mich in einer Welt dar, die wahre Unendlichkeit hat, aber nur dem Verstande spürbar ist, und mit welcher (dadurch aber auch zugleich mit allen jenen sichtbaren Welten) ich mich nicht wie dort in bloß zufälliger, sondern allgemeiner und notwendiger Verknüpfung erkenne. Der erstere Anblick einer zahllosen Weltenmenge vernichtet gleichsam meine Wichtigkeit, als eines tierischen Geschöpfes, das die Materie, daraus es ward, dem Planeten (einem bloßen Punkt im Weltall), wieder zurückgeben musz, nachdem es eine kurze Zeit (man weisz nicht wie) mit Lebenskraft versehen gewesen. Der zweite erhebt dagegen meinen Wert, als einer Intelligenz, unendlich durch meine Persönlichkeit, in welcher das moralische Gesetz mir ein von der Tierheit und selbst von der ganzen Sinnenwelt unabhängiges Leben offenbart, wenigstens so viel sich aus der zweckmässigen Bestimmung meines Daseins durch dieses Gesetz, welche nicht auf Bedingungen und Grenzen dieses Lebens eingeschränkt ist, sondern ins Unendliche geht, abnehmen lässt.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on Saturday, May 13, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

72 WIGMORE STREET, LONDON, W. 1.

MATRICULATION AND OTHER EXAMINATION NOTICES, SCHOLARSHIPS, FELLOWSHIPS, EXHIBITIONS, STUDENTSHIPS, and BURSARIES.

ALDENHAM SCHOOL, NEAR ELSTREE, HERTS.—ENTRANCE SCHOLARSHIPS.—An Examination will be held on June 1 and 2, 1922, for Scholarships tenable for two years and open to boys under 15 on May 1—namely, one Alfred Smith Scholarship of £50, about four Junior Platt Scholarships of £40. Assistance, by partial remission of tuition fees, may be given at the discretion of the Governors to scholars and other boys showing promise in cases where need of such assistance exists. Application should be made at the time of entry. Further particulars may be had from the HEAD MASTER.

BEDFORD SCHOOL.—Head Master: REGINALD CARTER, M.A. An Examination will be held at Bedford in March, 1923, for 4 Exhibitions (£50-£40, and 6 Nominations (£10-£20 for Boarders, and 4 for Day Boys. Apply for particulars to—HEAD MASTER, Bedford.

OLD BEDFORDIAN WAR MEMORIAL EXHIBITIONS.—Seven Exhibitions are offered to sons of Old Bedfordians on certain conditions. For particulars apply—HEAD MASTER, Bedford School.

BISHOP'S STORTFORD COLLEGE. ENTRANCE SCHOLARSHIP EXAMINATION.—An EXAMINATION is held annually in June, when SCHOLARSHIPS, EXHIBITIONS, and BURSARIES, varying from £50-£10, are offered.—Apply to the Head Master, Mr. F. S. YOUNG, M.A.

BLUNDELL'S SCHOOL, TIVERTON.—Six FOUNDATION SCHOLARSHIPS, including two of £60 a year, are competed for annually at the end of May. Candidates must be between 13 and 14 years of age on May 1st. The names of candidates must be sent in before May 20th to the HEAD MASTER, from whom entry forms and full particulars can be obtained.

BRIGHTON COLLEGE.—An Examination will be held June 6-7 to elect to EIGHT SCHOLARSHIPS varying in value from £60 to £45 a year. Full particulars on application to the HEAD MASTER.

CHELTENHAM COLLEGE.

TWELVE SCHOLARSHIPS AND EXHIBITIONS (not open to members of College or Junior School). These include five of £80 (one increased to £100 for special merit); "James of Hereford" Scholarship of £35 for boys born, or brought up, in Herefordshire; R.A.M.C. Scholarship of £50 (preference to sons of fallen officers). Awards made for all-round excellence, or special proficiency in any main subject. A Preliminary Examination will be held at the Candidate's School on Tuesday, May 23, and the Final Examination for Selected Candidates at Cheltenham on Wednesday and Thursday, May 31 and June 1.—Apply BURSAR, CHELTENHAM COLLEGE.

SCHOLARSHIPS.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—Examinations for SCHOLARSHIPS tenable in College and Manufacturing Works are held annually in April. For particulars apply to CHIEF CLERK, 66 Southampton Row, W.C.1.

FRAMLINGHAM COLLEGE, SUFFOLK.

PUBLIC SCHOOL, Incorporated by Royal Charter. Head Master: F. W. STROCKS, M.A. Inclusive Fees, £57 to £66 per annum. Modern Laboratories and Workshops.

EXAMINATION for ENTRANCE SCHOLARSHIPS in March.

Illustrated prospectus and full particulars on application to the HEAD MASTER or the SECRETARY.

GIGGLESWICK SCHOOL.—

Art Mistresses.

ART MISTRESS for high-class Boarding School in Canada. Drawing, Painting, Wood Carving, together with assistance with some very Junior English or Arithmetic. Resident, \$500 to \$650, according to qualifications and experience. Passage paid. B 95,524

HIGHLY QUALIFIED ART MISTRESS for Elementary Training College in Home Counties, to take charge of Drawing, instruction of 200 students. Ability to take Crafts a recommendation. Non-resident. Salary according to Burnham Scale. B 94,949

ART MISTRESS for large Public Secondary School close to London. Large classes and responsible post. Some knowledge of Craft work desirable. At least 4 years' experience in a Public Secondary School essential. Non-resident, probably Burnham Scale. B 94,866

SEPTEMBER VACANCIES FOR TEACHERS OF SPECIAL SUBJECTS.

Music Mistresses.

MUSIC MISTRESS for large high-class Boys' Preparatory School in Scotland. Good pianist essential and must be able to play two-manual organ; experienced; resident post with good salary. B 95,486

VIOLIN MISTRESS for large good-class Private Boarding and Day School in Scotland. Some Junior Pianoforte essential. Resident, £100 initial. B 95,506

VIOLIN MISTRESS for Public Boarding School in the West Indies with some Pianoforte. Resident £100-£120, initial. Passage paid. B 91,557

MUSIC MISTRESS for large Public Secondary School in Home Counties. Good Pianoforte and some Violin. L.R.A.M. Diploma and R.A.M. training. Non-resident, salary according to Burnham Scale. B 95,413

ELOCUTION MISTRESS for Private Secondary Boarding School in South Africa. Good qualifications and experience essential. Resident, £200. Passage paid. B 94,791

MUSIC MISTRESS for high-class Private Boarding School on East Coast. Pianoforte and Harmony essential and must be good performer. Good qualifications. Resident, from £130, upwards B 95,000

TWO MUSIC MISTRESSES for Church of England Secondary Boarding School in Canada, to take between them: Pianoforte, Solo and Class Singing, Violin, and 'Cello. Resident, \$800. Passage paid. B 95,125

SENIOR MUSIC MISTRESS for large Recognized Girls' School in Scotland. Important post and good qualifications and experience essential. Ability to organize and take entire charge necessary. Advanced Pianoforte, Singing, Aural Culture, and Harmony. Resident, £120-£180. B 94,950

FIRST-RATE VIOLIN MISTRESS for large Public Boarding School in the Midlands; must be able to take orchestra; 'Cello a recommendation. Churchwoman essential. Resident, salary according to Burnham Scale. B 95,242

MUSIC MISTRESS for large Public Boarding and Day School in South Africa. Pianoforte (Matthay method); Violin or 'Cello a recommendation. Experience and good qualifications. Resident, £160-£180, initial, with possibility of extra fees Passage paid. B 93,757

MUSIC MISTRESS for small Church of England Boarding School in Canada. Pianoforte, preferably on Matthay method and Theory, with

Violin as second subject. Diploma and experience desirable. Resident, £150. Passage paid. B 95,278

JUNIOR MUSIC MISTRESS for high-class Public School in Scotland. Good class Singing throughout School, Dictation and good Junior Pianoforte. Solo Singing a recommendation; L.R.A.M. or A.R.C.M.; £110 to £130, resident or £180-£200, non-resident. B 95,389

Gymnastics Mistresses.

GYMNASTICS AND GAMES MISTRESS for large Public Boarding School in the west. Dancing and Remedial Work essential. Diploma of Recognized College, preferably Dartford, Bedford, or Chelsea. Resident, £100-£120. B 93,826

DRILL, DANCING, AND GAMES MISTRESS for Church of England Public Boarding and Day School in the south-west of England. Non-resident, salary from £180 upwards. B 95,387

DRILL AND GAMES MISTRESS for Private Secondary Boarding School in South Africa. Good training and experience essential. Knowledge of Eurythmics desirable. Resident, £200. Passage paid. B 94,790

SENIOR GYMNASTICS MISTRESS for large Public Secondary Day School, close to London. Dartford training and experience essential. Responsible post. Non-resident, salary according to Burnham Scale. B 93,428

GYMNASTICS AND GAMES MISTRESS for high-class Day School in Canada. Folk Dancing and Girl Guide work. Dartford, Bedford, or Chelsea training only. Non-resident, \$1,250 to \$1,400, increasing. Allowance of \$100 for passage. B 95,151

MISTRESS FOR PHYSICAL TRAINING for Elementary Training College in the Eastern Counties. Dartford Training essential. Non-resident, part-time post. Salary to be arranged. B 95,412

GYMNASTICS, DRILL, AND GAMES MISTRESS for large good-class Private Boarding and Day School in the north. Resident, £100 or non-resident, £150. B 95,509

GYMNASTICS AND GAMES MISTRESS for large important Public Boarding and Day School in Ireland. Good qualifications essential. Dartford, Bedford, or Chelsea Training desirable. Resident, £120, or more. B 95,402

GYMNASTICS AND GAMES MISTRESS for large Public Secondary Day School close to London. Dartford, Bedford, Chelsea or Ansty training. Some experience desirable. Non-resident. Salary according to Burnham Scale. B 95,112

GYMNASTICS AND GAMES MISTRESS for Recognized Roman Catholic Secondary Day School in the north. Training essential. Non-resident, salary according to Burnham Scale. B 95,218

DRILL, GAMES, AND DANCING MISTRESS for first-class Church of England Secondary Boarding School in the Home Counties. Dartford, Bedford, or Chelsea Training and some experience. Resident, salary according to Burnham Scale. B 94,715

GYMNASTICS MISTRESS for a Swedish Gymnasium in London to take classes and visit schools, &c. Dartford, Bedford, or Chelsea training. Experience desirable. Ability to take Dancing and Games a recommendation. Resident, £120. B 94,329

FULLY-QUALIFIED DRILL AND GAMES MISTRESS for large Boarding School in New Zealand. Good qualifications essential. Resident, £150-£200. Passage paid. B 93,202

SECOND GYMNASTICS MISTRESS for large high-class Private Boarding School in the Midlands. Good Dancing and Games essential. Resident, £100-£120. B 93,860

Domestic Science Mistresses.

DOMESTIC SCIENCE MISTRESS for large Public Secondary Day School in Home Counties. Needlework, Dressmaking, Cookery, Housewifery, and Laundrywork essential. Some Junior School subject a recommendation. Good diplomas in Domestic Subjects and Needlework, and about 2 years' experience essential. Non-resident, salary according to Burnham Scale. B 95,508

DOMESTIC SCIENCE MISTRESS for large Public Secondary Boarding School in Home Counties. Needlework, Cookery, Housewifery, Laundrywork, and Dressmaking, and must be willing to act as Housemistress for part of time. Training in Domestic Science and good organizer and disciplinary essential. Boarding School experience. Resident, £120. B 95,370

DOMESTIC SCIENCE MISTRESS for large Secondary Boarding and Day School in the north. Needlework, Cookery, and Dressmaking essential. Laundrywork and experience of household management a recommendation. Must be willing to take charge of housekeeping in Junior House. Diplomas in Needlework, Cookery, and Dressmaking essential. Experience desirable. Resident, salary according to Burnham Scale. B 95,327

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

SELECTED EDUCATIONAL BOOKS

PUBLISHED AT THE

University Tutorial Press.

BOTANY AND NATURE STUDY.

Text-book of Botany. By J. M. LOWSON, M.A., B.Sc., F.I.S.
Fifth Edition, Revised and Enlarged. 9s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

Practical Botany. By FRANCIS CAVERS, D.Sc. *2nd Ed. 6s. 6d.*

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

Life Histories of Common Plants. By FRANCIS CAVERS, D.Sc., late Lecturer in Biology at Goldsmiths' College. *4s. 6d.*

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

The Aims and Methods of Nature Study : A Guide for Teachers. By JOHN RENNIE, D.Sc., F.R.S.E. With an Introduction by Professor J. ARTHUR THOMSON. *5s.*

School Lessons in Plant and Animal Life. By JOHN RENNIE, D.Sc., F.R.S.E. *6s. 6d.*

The aim of the book is to help Teachers of Nature Study. It supplies a course of over eighty lessons in Nature Study, with full guidance as to how to learn and how to teach the subject.

School Gardening, with a Guide to Horticulture. By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous illustrations and plans. *4s.*

This book affords Teachers sound guidance in the correct methods of teaching this subject and of organizing the classes.

HISTORY AND GEOGRAPHY.

Economic History of England. By MILTON BRIGGS, M.A., B.Sc., F.R.Econ.S. *8s. 6d.*

An elementary account of the economic development of England down to the present day.

A Social History of England. By FREDERICK BRADSHAW, D.Sc., M.A., Lecturer in History at Armstrong College, Newcastle-on-Tyne. *Second Edition. 6s.*

An elementary account for colleges and upper forms in schools of the social and economic development of England.

Groundwork of English History. By M. E. CARTER, Honour School of Modern History, Oxford. *4s.*

An attempt to present the salient facts of English History in a readable but definite form unencumbered with irrelevant details.

A History of the British Colonies. By H. L. JONES, B.A., and C. SHERRATT, B.A. *3s. 6d.*

Supplies a short account of the history and present government of the British Commonwealth of Nations including the territories added by the recent treaties.

Main Landmarks of European History. From 31 B.C. to modern times. By F. N. DIXON, B.A. *Second Edition. 3s.*

The object of the book is to trace in outline the successive steps of the process which has evolved the Europe of to-day from the Europe of 31 B.C.

Text-book of Geography. By G. C. FRY, M.Sc. *Fourth Edition, Revised to 1921 and Enlarged. 6s. 6d.*

Stress is laid on the interconnexion of Physical Geography and Political Geography. The present issue indicates territorial changes due to the war.

EDUCATION.

Principles and Methods of Teaching. By JAMES WELTON, D.Lit., M.A., late Professor of Education in the University of Leeds. *Second Edition, Revised and Enlarged. 8s. 6d.*

In this work the treatment is theoretical in the sense of setting forth a consistent body of doctrine. But that the principles and methods here set forth are practical has been proved by the successful working of every one of them in school.

Teaching : Its Nature and Varieties. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. *6s. 6d.*

An analysis of the processes of teaching as they occur in all subjects. The author examines the nature of the teaching itself, showing why certain methods should be employed.

Principles and Methods of Moral Training, with Special Reference to School Discipline. By JAMES WELTON, D.Lit., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. *5s.*

This work treats of the general nature of good character—duty, virtue, conscience : of the school as a moral community in which good character is developed, &c.

Principles and Methods of Physical Education and Hygiene. By W. P. WELTON, B.Sc., Master of Method in the University of Leeds. With a Sketch of the History of Physical Education by JAMES WELTON, D.Lit., M.A. *6s. 6d.*

Text-book of Hygiene for Teachers. By R. A. LYSTER, M.D., B.Sc., D.P.H., Medical Officer of Health for Hampshire and Chief Medical Officer to the Education Committee. *6s. 6d.*

For Teachers in Training and for the Teachers' Certificate, Section M.

MATHEMATICS AND SCIENCE.

A First Course in Mathematics for Technical Students. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. *Second Edition. 3s.*

An easy course of Practical Mathematics, including Arithmetic, Mensuration, and Algebra, suitable for use in Evening Continuation Schools and Preliminary Technical Classes.

A Second Course in Mathematics for Technical Students. By the same Authors. *6s.*

In this book the scheme of the authors' "First Course in Mathematics for Technical Students" has been extended to provide, in all, a three years' course in the subject.

General Elementary Science. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. *Fourth Edition. 5s.*

Provides a simple and instructive course of Elementary Science, containing the rudiments of mechanics, physics, and chemistry.

Technical Electricity. By Professor H. T. DAVIDGE, B.Sc., and R. W. HUTCHINSON, M.Sc., A.M.I.E.E. *Third Edition. 8s. 6d.*

The object of this book is to give the reader a thorough acquaintance with the elements of Practical Electrical Engineering, and to base his knowledge on sound scientific principles.

A First Course in Engineering Science. By P. J. HALER, B.Sc., A.M.I.Mech.E., and A. H. STUART, B.Sc. *2nd Edition. 4s.*

Includes the elements of Applied Mechanics and Heat.

First Stage Heat Engines. By J. W. HAYWARD, M.Sc. *4s.*

In addition to mentioning the usual demonstrations of the rules given, several experiments are suggested which can be carried out with home-made apparatus.

Supplement to

THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 634.

MAY 1, 1922.

Cambridge University Press

RECENT PUBLICATIONS.

Letters on Education. By EDWARD LYTTETON, M.A., D.D., D.C.L. Crown 8vo. 5s net.

"In this thoughtful and stimulating volume Canon Lyttelton expounds his educational theories in the form of a series of letters between two friends, one a bachelor and the other the father of three young children. The principal topic is the proper training of the young. . . . The letters are weighty and suggestive, and are relieved by a certain familiarity."—*The Aberdeen Daily Journal*.

The Groundwork of Social Reconstruction. By WILLIAM GLOVER, Author of "Know Your Own Mind." Fcap 8vo. 2s 6d net.

"A little book of condensed wisdom, extremely bright in style, and with that rare gift of simple and popular elucidation of abstract ideas. . . . It opens up a new method of intellectual and spiritual approach to minds quite closed against the truth expressed in traditional ways and terms."—*The Sunday School Chronicle*.

The Story of Dr Johnson. Being an introduction to Boswell's Life. By S. C. ROBERTS, M.A. Crown 8vo. With a portrait of Johnson. 2s 6d.

This book was first published in 1919 and quickly reached a second edition. A cheap school edition is now produced in the hope of introducing a larger circle of young readers to the study, and the charm, of Johnson and his age. Copies of the earlier edition (containing 16 illustrations and a bibliography) may still be obtained, price 5s. net.

The Owl and the Nightingale. Edited with introduction, texts, notes, translation, and glossary, by J. W. H. ATKINS, M.A. With a frontispiece. Demy 8vo. 16s net.

In this edition Professor Atkins deals with *The Owl and the Nightingale* as a piece of literary art, illustrative of the culture of the age that produced it. He throws fresh light on the general significance of the poem by a detailed investigation of its sources, its form, and its theme, and has made every effort to provide a reliable text.

Anglo-Saxon and Norse Poems. Edited and translated by N. KERSHAW. Demy 8vo. 14s net.

The first six pieces included in this book are among the most interesting examples of Anglo-Saxon Poetry which have come down to us; yet with one or two exceptions they have received comparatively little attention from English scholars. The Norse pieces which follow are still less known in this country.

The Laws of the Earliest English Kings. Edited and translated by F. L. ATTENBOROUGH, M.A. Demy 8vo. 15s net.

This edition of the Laws, the first for more than eighty years, is intended primarily for English readers and students interested in the early social and constitutional history of our country, who are unable to make use of Liebermann's great work, the standard authority on the subject.

Tudor Constitutional Documents, A.D. 1485-1603. With an historical commentary. By J. R. TANNER, Litt.D. Royal 8vo. 37s 6d net.

Documents relating to English Constitutional History serve a high educational purpose, for they supply materials for constructing a proper historical background and creating the real historical atmosphere. With their aid it is possible for the student to test for himself the generalisations and epigrams of historians, and to find out what is really behind them.

Medieval France. A Companion to French Studies. Edited by ARTHUR TILLEY, M.A. With 17 plates and 2 maps. Demy 8vo. 25s net.

The aim of this volume is to present to the reader within a moderate compass a survey of the history (political, military, naval, and economic), language, literature, and art of Medieval France, an initial chapter on geography serving as a setting both for this and for the companion volume on Modern France to be published later. The volume is the work of ten writers, all experts in their several provinces.

A Guide to English Gothic Architecture.

Illustrated by numerous drawings and photographs. By SAMUEL GARDNER. With 180 photographic plates and 56 figures in the text. Imperial 8vo. 16s net.

A handbook of English Gothic Architecture, consisting of a fine series of plates with descriptive notes, a general introduction, a glossary, and a useful series of appendices.

The Cambridge Medieval History.

Planned by J. B. BURY, M.A., Regius Professor of Modern History. Edited by H. M. GWATKIN, M.A., J. P. WHITNEY, D.D., J. R. TANNER, Litt.D., and C. W. PREVITE-ORTON, M.A. Vol III, Germany and the Western Empire. With separate portfolio, containing 11 maps. Royal 8vo. 50s net.

"Will prove indispensable both to teachers and learners. . . . The names of the contributors, English and foreign alike, are a guarantee of sound work, and the whole level is one of scholarship and distinction."—*The Oxford Magazine* on Vols I and II.

History of Holland. By GEORGE EDMUNDSON, D.Litt., F.R.G.S., F.R.Hist.S. With 2 maps. Demy 8vo. 22s 6d. Cambridge Historical Series.

"Had we been asked at any time in recent years to name the leading authority on Dutch history in this country, the answer would certainly have been the name of the author of this work."—*The Times Literary Supplement*.

Horace: Odes and Epodes. A study in poetic word-order. By H. DARNLEY NAYLOR, M.A., Trinity College, Cambridge, Hughes Professor of Classics in the University of Adelaide. Demy 8vo. 20s net.

This book is not a new commentary on part of Horace, but, as the title intimates, a study of poetic order, with illustrations from the *Odes*, *Carmen Saeculare*, and *Epodes*, and is intended to be used side by side with any edition of the poet. It is the author's aim to show that word-order is no more negligible in poetry than it is in prose, and that the rules laid down by Professor J. P. Postgate and exemplified by the author in certain Livian studies are observed by the poet no less than by the writer of prose.

Hampshire. By TELFORD VARLEY. With maps, diagrams, and illustrations. Crown 8vo. 3s 6d. Cambridge County Geographies.

"It is really a book that one cannot do without. The descriptions of scenery, local characteristics, and the like are extraordinarily well done, and all through the book the amount of solid information conveyed is really amazing."—*The Hampshire Observer*.

The Provinces of Ireland. A new series under the general editorship of GEORGE FLETCHER, F.G.S., M.R.I.A., of the Department of Agriculture and Technical Instruction for Ireland, consisting of four volumes—on Ulster, Munster, Leinster, and Connaught—and a larger volume dealing with Ireland as a whole.

The volumes on Leinster and Connaught are now ready. Crown 8vo. With maps, diagrams, and illustrations. 6s 6d net each. (Ulster and Munster already published. 6s 6d net each.) A prospectus giving particulars will be sent on request.

"Should become the pocket companion of every traveller in Ireland." *The Times Literary Supplement*.

Tides and Tidal Streams. By Commander H. D. WARBURG, R.N. (Retired), Superintendent of Tidal Work, Hydrographic Department, Admiralty. With a folding plate and 7 text-figures. Royal 8vo. 8s 6d net.

The object of this Manual is to give an adequate explanation of the causes of all tidal phenomena, and, whilst explaining the correct methods of using tidal information now available, to introduce improved methods of giving such information by means of harmonic constants, and to explain how, from these constants the height of the tide may be calculated, at any port in the world and at any moment, with the necessary degree of accuracy.

„ (Parts I, II) ..		I, 2s 6d ; II, 2s
„ (Part III) ..		2s

ALGEBRA

Elementary Algebra. By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A.

	With Answers	Without Answers
Complete in one volume ..	8s	7s 6d
Or in two volumes—		
Vol I Algebra for Beginners ..	4s 6d	4s
Vol II ..	5s	4s 6d
Vol I is also published in two parts—		
Part I Chapters I—IV ..	1s 9d	1s 9d
Part II Chapters V—XIV ..	2s 9d	2s 9d

Algebra for Secondary Schools. By CHARLES DAVISON, Sc.D. 10s. Or in two volumes, I, 6s 6d ; II, 5s ; without answers, 4s 6d each.

Exercises, separately. With answers, 5s ; without answers, 4s 6d.

Problem Papers supplementary to Algebra for Secondary Schools. Paper cover, 1s.

Higher Algebra for Colleges and Secondary Schools. By the same author. 8s 6d.

An Algebra for Preparatory Schools. By T. DENNIS, M.A. 3s 3d. Teachers' edition, 7s 6d.

A School Algebra Course. (Examples only.) By F. GORSE, M.A. With or without answers, 5s. Or in three parts : Part I, 2s 3d ; Parts II and III, 2s each.

Elementary Algebra. By G. H. FRENCH, M.A., and G. OSBORN, M.A. With answers, 5s ; without answers, 4s 6d.

TRIGONOMETRY

The Elements of Trigonometry. By S. L. LONEY, M.A. 4s 6d.

Plane Trigonometry. By the same author. 10s. Or in separate parts : Part I, An Elementary Course, excluding the use of imaginary quantities. 6s. Part II, Analytical Trigonometry. 5s.

An Elementary Treatise on Plane Trigonometry. By E. W. HOBSON, F.R.S., and G. M. JESSOP, M.A. 7s 6d.

Plane Trigonometry for Secondary Schools. By C. DAVISON, Sc.D. 6s 6d.

A Class Book of Trigonometry. By C. DAVISON. 4s 6d.

Trigonometry for Beginners. By J. W. MERCER, M.A. 6s.

Numerical Trigonometry. By the same author. 3s 6d.

Examples in Numerical Trigonometry. By E. A. PRICE, B.A. 3s 6d.

Four-Figure Tables. By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A. 1s 6d.

Improved Four-figure Logarithm Table. By G. C. MACLAREN. 2s 9d.

Mathematical Problem Papers. Compiled and arranged by Rev. E. M. RADFORD, M.A. 6s. Solutions, 12s 6d.

Practical Measurements. By A. W. SIDDON, M.A., and A. VASSALL, M.A. 2s 6d.

GEOMETRY

A First Course of Geometry. By C. DAVISON, Sc.D. 2s 3d.

Plane Geometry for Secondary Schools. By CHARLES DAVISON, Sc.D., and C. H. RICHARDS, M.A. 8s net. Or in four parts, paper boards. Part I, 2s 9d ; Parts II—IV, 2s each.

The Elements of Solid Geometry. By CHARLES DAVISON, Sc.D. 4s.

Elementary Geometry (Practical and Theoretical). By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A. 7s. Or in parts, particulars on application.

A Shorter Geometry. By the same authors. 4s 6d. Or in parts, particulars on application.

Modern Geometry. By the same authors. 6s.

Solid Geometry. By the same authors. 2s 3d.

A Geometry for Schools. By F. W. SANDERSON, M.A., and G. W. BREWSTER, M.A. With or without answers, 4s 3d. Examples from the above. With or without answers, 2s 9d.

Geometrical Drawing. With Notes and Examples. By W. H. BLYTHE, M.A. In two parts. 2s 6d each.

SCIENCE

Experimental Science. By S. E. BROWN, M.A., B.Sc. In two parts. Part I, Physics, 6s 6d ; Part II, Chemistry, 4s 6d. The two parts may be obtained in one or two volumes for 10s 6d. Part I is also issued in four sections.

Physical Chemistry for Schools. By H. J. H. FENTON, M.A., Sc.D., F.R.S. 5s 6d.

Inorganic Chemistry. By E. I. LEWIS, B.A., B.Sc. 10s net. Or in two parts, 3s 6d net each.

Notes on Elementary Inorganic Chemistry. By F. H. JEFFERY, M.A. 3s 6d net. With blank pages interleaved. 4s net.

Sound. By J. W. CAPSTICK, D.Sc. 6s.

Lecture Notes on Light. By J. R. ECCLES, M.A. 7s. Teachers' Edition, 12s 6d.

Heat and Light. By Sir R. T. GLAZEBROOK, M.A., F.R.S. 10s. And separately : Heat, 5s ; Light, 6s.

Mechanics and Hydrostatics. By Sir R. T. GLAZEBROOK, F.R.S. 9s. Also in separate volumes :—Dynamics, 4s 6d ; Statics, 4s ; Hydrostatics, 3s.

Electricity and Magnetism. By Sir R. T. GLAZEBROOK, F.R.S. 10s.

A School Electricity. By C. J. L. WAGSTAFF, M.A. 7s 6d.

Elementary Dynamics for Schools. By C. E. ASHFORD, M.A. 6s 6d.

Mechanics and Hydrostatics for Beginners. By S. L. LONEY, M.A. 5s.

The Elements of Statics and Dynamics. By the same author. 10s. Separately : Statics, 5s 6d ; Dynamics, 5s.

The Elements of Hydrostatics. By the same author, 5s 6d.

Treatise on Elementary Dynamics. By the same author. 8s.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

BLACK'S TRAVEL PICTURES.

Selected and Edited by R. J. FINCH, F.R.G.S.

In Special Detachable File Portfolios.
11 x 9 inches.

Each Set contains 48 carefully selected Pictures :
24 in Colour from Water Colours painted on the
spot, and 24 in Black and White from photographs.

PRICE **2/6** PER SET.

Explanatory Notes draw attention to the chief features of the pictures, and locate and explain the scenes.

Questions and Exercises on the pictures are provided. These are merely suggestive. Teachers will find in the pictures much more upon which they can base exercises of their own.

A specially drawn **Map**, on which each scene is definitely and clearly located by a simple device.

Pictures are filed in a Special File, so that each can be detached for examination; and are numbered so that each can instantly be restored to its place.

Miniature
Reproduction of a Cover.

Sets in the Series.

AFRICA.
AMERICA (Central and South).
AMERICA (North and West Indies).
ASIA.
AUSTRALASIA.
BRITISH EMPIRE.
BRITISH ISLES.
COUNTRIES OF THE GREAT WAR.
EUROPE.
THE MEDITERRANEAN.
LAND FORMS AND CITIES—Sets I and II.

How are we to ensure that our pupils may gain a pictorial idea, say, of the Alps, which is the necessary preliminary to applied and scientific geography? Words are sometimes deceptive; the finest description of a glacier will probably leave a very inadequate impression upon the mind of the child who has never seen one. The greatest assistance therefore that we can obtain must be derived from a liberal use of carefully selected pictures. Three minutes' examination of a good coloured illustration of a glacier, of a tea plantation, of the Colorado canyon, will give a child a far clearer idea than can be obtained from much verbal explanation. Illustrations are no longer to be regarded as something extraneous or optional; they must be carefully chosen and used for a definite purpose by the teacher. Often they should supply the subject-matter of the lesson, and questions and exercises should be based upon them.

To meet this need, Messrs. A. & C. Black have issued their sets of *Travel Pictures*, which are supplied in detachable portfolios. Mr. R. J. Finch, who edits the series, has carefully selected illustrations, both in colour and in black and white, and has appended short notes and questions which will prove invaluable to the teacher of geography. All the chief regions of the world are represented in the series.

A. & C. BLACK, Ltd.,
4, 5 & 6 Soho Square, London, W.1.

REVIEWS AND MINOR NOTICES.

MODERN DEVELOPMENTS IN SCHOOL METHODS.

The Dalton Laboratory Plan. By EVELYN DEWEY. (4s. 6d. net. Dent, London and Toronto; Dutton, New York.)

The appearance of a new plan or method or theory in education is not a peculiarity of the present time, though our own generation is certainly doing its best not to remain undistinguished in this respect. Any one whose recollections extend backwards for thirty or forty years can think of one "method" after another which has held the field of interest among progressive teachers, has apparently vanished from that field, but has demonstrably left its mark upon our schools. As to the reception of such novelties, there always were and there always will be two extremes, that of uncritical agreement by a few hungerers after some new thing, and that of uncritical rejection by a host of those who desire no new thing. We cannot recall any new plan or discovery in teaching which did not aim at remedying some mischievous weakness in the existing system. The trouble has usually been that the remedy has either been neglected, or has in some quarters been applied so indiscriminately as to produce a new complaint.

The old-time school master dealt with each pupil as an individual. Then came the era of big schools and big classes, and along with it what we call the oral lesson, and what the Americans call the recitation, involving a new technique, and requiring peculiar qualifications in the successful teacher. But the really successful practitioner of this art has always perceived with disquietude the weakness of his performances. He has in fact become less and less of a teacher and more and more of a preacher, and the individual pupil has tended to become lost in a crowd of thirty or forty or fifty or even sixty. This admitted evil has, of course, been most obvious in the case of subjects which readily lend themselves to preaching, such as history, literature, and popular science; and it has been at its height in schools where the classes are so large as to preclude the possibility of adequately supervised written work.

From this evil the "Dalton plan," taking its name after a town in New England, is designed to rescue the school system. In the volume before us Miss Dewey, who, if we may say so, worthily bears an honoured name, has described the principles and practice of the plan, and has shown how it has been tried at the Dalton High School, at a small private school in New York, and, nearer home for us, at the Streatham County Secondary School for Girls. Miss Dewey is no hot gospeller, but has wisely limited herself to a sympathetic exposition of the strength of the plan, without ignoring the weak points which have so far been revealed.

The chapter entitled "Opinions of Teachers and Pupils" is valuable and timely. We are inclined to think that one of the pupils hits the nail on the head when she says, "Subjects and teachers make a great difference." Especially in subjects in which "chalk and talk" are now the order of the day, the Dalton plan, with its assignments of definite individual work, and its substitution of the laboratory ideal for that of the talking shop, comes as an apt, indeed almost a stern, reminder that our present methods need revision.

On the other hand, we believe that the oral lesson will always remain as a source of inspiration, except where the teacher, through lack of natural aptitude or lack of training, is inarticulate. Indeed, the vice of all these new "plans" is that they tend to ignore the greatest factor of all, the teacher's personality, and to suggest that a certain method of teaching or of organization will, if adopted, prove a panacea for our educational woes. In his anxiety for the pupil's individuality, the reformer is apt to forget the teacher's individuality. But it is fair to say that Miss Dewey does not make this mistake. She intends her book as "an exchange of information between

teachers," and all she asks is that a plan of organization "which has appealed to many schools as a better way" should meet with open-minded consideration. We hope it will meet with such consideration, but we hope also that no head of a school will be unwise enough to force this or any other plan upon an unwilling teacher. The freedom of the individual teacher is far too precious an asset to be sacrificed to any scheme of organization.

GROWTH OF THE BRITISH EMPIRE.

A Short History of British Expansion. By J. A. WILLIAMSON. (25s. net. Macmillan.)

Six years ago Mr. J. A. Williamson published a small text-book entitled "The Foundation and Growth of the British Empire." It was on its appearance, and it still remains, one of the best introductory sketches of the expansion of England which it is possible to conceive. It combines in a quite remarkable degree lucidity of arrangement, proportion of parts, distinction of style, and attractiveness of presentation. More than most handbooks it has well deserved the wide vogue which it has attained.

The popularity of this prefatory survey has encouraged Mr. Williamson to pursue more deeply and more widely his study of the development of Britain's overseas empire, and he has embodied the results of extensive and fruitful researches in the present "Short History." The term "short" is a relative term. When one considers the magnitude and complexity of the phenomena with which the author deals, the work appears to be a marvel of brevity and condensation.

Mr. Williamson has wisely adhered to the admirable plan on which his earlier book was framed. In Part I he deals with the medieval antecedents of the Empire, that is to say, with the growth of English sea-power and with the development of those great merchant companies, such as the Staplers and the Adventurers, which first carried island influence beyond the English shores. In Part II he treats in a fascinating manner of those Tudor experiments in oceanic enterprise whose records never grow stale with repetition. To the familiar outline, however, he is able to add a mass of new and illuminating detail, derived mainly from the numerous monographs which have been published during the last twenty years, as the result of Record Office researches. Part III covers the Stuart Period proper, A.D. 1603-1688, and describes the foundation of the Mercantile Empire, primarily by the process of peaceful commercial activity. In this section Mr. Williamson's narrative becomes fuller than in the earlier sections, and he presents invaluable summaries of what is known respecting the establishment of North American Colonies, West Indian plantations, and East Indian factories. Part IV tells the story of the era of the great wars, A.D. 1688-1815, describing on the one hand the loss of the thirteen trans-Atlantic dependencies, but on the other hand the founding of a new dominion, embodying non-mercantile principles, in Canada, Australasia, South Africa, and India. Part V discusses the still unfinished story of expansion and consolidation of the Empire since A.D. 1815.

It is safe to say that this masterly work, with its dignity of style, sobriety of judgment, and wealth of information, will prove of inestimable service both to students in our Colleges and Universities, and to statesmen and others engaged in practical affairs. For not only is it a storehouse of knowledge in itself; it also supplies in footnotes and frequent bibliographies expert guidance as to the best authorities available for further reading. Nor must we omit to mention its twenty-one maps—eight coloured and thirteen plain—specially drawn in Mr. Emery Walker's inimitable style.

ESSENTIALS OF PSYCHOLOGY.

Psychology: A Study of Mental Life. By Prof. R. S. WOODWORTH. (8s. 6d. net. Methuen.)

We have here a solid work on a subject that is so rapidly changing that it is difficult to keep up with it. Books of

this kind are therefore needed at regular intervals. Prof. Woodworth has brought his facts well up to date, but he has not overturned all the recognized arrangements. If we turn to many of the new psychologies we find a new set of chapter headings from what we have been accustomed to. Miss Brierley's *Introduction*, for example, has almost none of the old familiar headings. The book before us has them all, with certain additions. No doubt the order is somewhat different. We find, for example, the important chapter on *Perception* far on in the book—seventeenth in the rank in fact—instead of in its old place very near the beginning.

The book is meant for students, but not necessarily students of education. This explains the totally different outlook from that of Starch's recent book. But the teacher will find here practically all that is necessary for his purpose, and there may be a certain advantage in sharing in the general point of view, as a rest from the more professional one to which he has become accustomed. Prof. Woodworth takes a broad human view of things, and does not care to enter too minutely into those irritating squabbles about terms that form so prominent a part of the contents of many books on this subject. Let the dictionary see to that, is practically his answer all the way through, when questions of terms arise, though he specifically makes this recommendation in connexion with different meanings of *will*. So in dealing with the emotions he is content to expound what is essential in the Lange-James theory, without wasting time in the mere wrangling about the terms used.

Now and again one would like Prof. Woodworth to go a little more deeply into certain matters which he dismisses somewhat airily. For example, when he has accepted the position that acquired characteristics are not carried on by heredity, he contents himself with the statement that instincts are not ancestral habits, but gives no suggestion of an explanation of how instincts in that case ever came into existence. Still, we cannot but admit that it is not his business to explain origins, and that as he says "the psychologist should take instinctive behaviour as he finds it." The book is well illustrated, and is provided with series of questions at the ends of the chapters, as well as with useful lists for further reading. It is furnished with a good index.

ART.

Drawing for Art Students and Illustrators. By A. W. SEABY. (12s. net. Batsford.)

The lucidity of this book and the unmistakably practical character of its instruction, combined as it is with due regard to the æsthetic commitments of the draughtsman whenever pencil or charcoal is put to paper, make it a book we can thoroughly recommend to the art students and illustrators for whom it is intended. The author treats of drawing as a serious *study*, as an art to be searched for rather than picked up, and warns the student that technical power is not a mere sleight-of-hand to be learned as a series of "tips" in a short course of correspondence teaching. He insists on that most important point, the necessity for "concentrated intellectual vision" in the early stages of a drawing, and he also sounds a wholesome note of warning on the danger of the jargon of the specialist, and the necessity for agreement between teacher and pupil as to the meaning of terms—for example, that ambiguous word "construction." It is good to read an acknowledgment of the value of the "practical art teaching" contained in Ruskin's "Modern Painters." Ruskin's work as a *practical* teacher has been too little appreciated by many of the men who indirectly owe so much to his influence. The book contains a well chosen series of over seventy illustrations, including reproductions of drawings by the old masters, and for these as for the text we have nothing but praise.

CLASSICS

The Pervigilium Veneris in Quatrains. By J. A. FORT. (3s. 6d. net. Oxford University Press.)

Mr. Mackail, who contributes a short preface to this reconstruction of one of the most beautiful poems in the Latin language, says, "Lovers of poetry, no less than scholars, may be grateful for it," and we thoroughly agree with him. In arranging the poem in quatrains with the famous refrain, *Cras amet qui nunquam amavit, quique amavit cras amet*, recurring at intervals,

Mr. Fort is following out a suggestion which Mr. Mackail himself made some thirty years ago, but the internal evidence which justifies such an arrangement is here for the first time set out at length. As to authorship, Mr. Fort attributes the poem—and most students who read his arguments will agree—either to Tiberianus or to some wholly forgotten poet. There are notes which discuss textual difficulties, and an appendix containing fragments of Latin trochaic verse from Florus to Prudentius.

Macmillan's Elementary Classics.—*Noctes Latinae Alterae*. By WALTER MADELEY. (2s.)

Those whose duty it is to teach Latin to small boys will be well advised to get this unpretentious but delightful little volume. It contains seven stories, based upon classical authorities, which cannot fail to interest lower and middle forms far more than the conventional Caesar or Eutropius. Two of them—adapted from Apuleius—are quite thrilling, and Mr. Madeley will no doubt be thanked by many a small boy whose good fortune it is to have his Latin lessons enlivened by them.

The Odyssey, rendered into English Prose for the use of those who cannot read the original. Second Edition, corrected and re-set. By SAMUEL BUTLER. (7s. 6d. net. Cape.)

The Authoress of the Odyssey, Where and When she wrote, Who she was, the Use she made of the *Iliad*, and How the Poem grew under her hands. By SAMUEL BUTLER. Second Edition, corrected and re-set. (7s. 6d. net. Cape.)

Although during his lifetime Butler was rather offended at the slight notice which Greek scholars afforded his views, we cannot here repair the omission by producing arguments to prove that Nausicaa did not write the *Odyssey*, and that it was not written at Trapani. It may be difficult to prove that Ophelia did not write *Hamlet*, or that it was not written in Iceland, and yet we don't believe it! But, of course, the interest of Butler's work lies not in its value as a contribution to the Homeric question, but in the verve and naivety of his outlook. Whatever he may have intended it for, it is not for the Greek scholar but for the general reader, and as both "The Authoress of the *Odyssey*" and the translation have been out of print, and rather scarce books for some time, the general reader will be most grateful for these new editions, and the Butler lover will be glad that they are re-issued in volumes of the same size as the rest of Butler's works. The publisher deserves a word of congratulation upon the neat appearance of their black bindings with white labels.

Κῆρυμα ἐς δεῖ. Selected by A. L. IRVINE. (3s. 6d. net. Curtis.)

This little volume is well worthy of its title. It contains twenty-seven Latin pieces and seventeen Greek, and all of them are gems of literature. Whether used as a school-book for "repetition" or as a *vade mecum* for the classical scholar, it should be equally delightful. The pieces are printed with translation *en face*, so it may also bring joy to those whose classics are a little rusty. The print is good and the binding strong.

The Odyssey of Homer. Translated by G. H. PALMER. (6s. Constable.)

We strongly recommend this new edition of Mr. Palmer's translation of the "Odyssey" to all who are not already acquainted with it. His rhythmic prose seems to us to reproduce more of the strength and freshness of Homer than do most verse translations.

The Manuale Scholarium. Translated from the Latin by Prof. R. F. SEYBOLT. (10s. 6d. net. Milford.)

This once well-known book of students' Latin dialogues first appeared in 1481, and for two centuries was a popular text-book. Dr. Hastings Rashdall has described it as "intended apparently in part as a repertoire of the Latinity which a scholar would require for conversational purposes at the University." Dr. Seybolt, the translator and editor of this book remarks that modern interest has been chiefly shown in the "Manuale" on account of its description of the freshman ceremony of initiation. But it contains other interesting details, e.g. particulars of courses of study, methods of instruction, requirements for degrees and daily life in lodgings. Dr. Seybolt has introduced deliberately into his translation modern students' slang and colloquialism to represent the bad Latin and "etymological vagaries" of the original. He has added illustrative quotations from early university Statutes of Erfurt, Heidelberg, and Leipzig. There is also a good bibliography. Altogether this is a very usefully prepared document in the history of education. We confess we should have liked to find the Latin text side by side with the English.

ECONOMICS.

The Development of Economics, 1750-1900. By O. FRED BOUCKE. (12s. net. 348 pages. Macmillan.)

Teachers and students who are looking for a useful guide to the history of economic theory will find in Prof. Boucke's book an admirable presentation of the subject. Prof. Boucke has the rare quality of combining interest and clearness. His method is to deal not with writers, but with movements, and of these he has mapped out four. The first he calls Naturalism, and this comprises the Physiocrats; the second, Utilitarianism; the third, Historism; and the last, Marginism. In each case Prof. Boucke traces the gradual growth of the particular school of thought, and shows what place it occupies in the general thought of the period in which it flourished. The reader will find, for example, an exceedingly helpful chapter on the genesis of the Physiocrats and of Adam Smith's attitude to economic problems, illustrated by actual quotations from writers. This is a feature of the book as a whole, and it must be said that the extracts have been chosen with discernment. Perhaps one of the best sections in the volume is the treatment of Marx and of socialist economic theory. It is mainly descriptive, showing the elements in the Marxian point of view, how much there is in them of Marx and how much of his predecessors. Prof. Boucke has written one of the most useful books that have recently appeared among publications on economic topics, and teachers and students should not delay in making themselves acquainted with it. They will find in its pages a thoughtful and original presentation of the history of economic thought from Quesnay to Davenport.

Problems and Exercises to accompany Clay's Economics for the General Reader and Ely's Outlines of Economics. By H. GORDON HAYES. (2s. 6d. net. 67 pages. Macmillan.)

Clay's and Ely's books on economics have firmly established themselves as introductory treatises of the greatest usefulness to students, though while Clay is well known in this country and in the United States, Ely is intended mainly for students in the latter country. It was a happy thought on the part of Prof. Hayes, of the Ohio State University, to prepare a series of tests on the subject matter of both the books. His little volume contains 408 questions, which should prove very helpful to teachers of economics.

EDUCATION.

Report of the Tenth Annual Conference of Educational Associations held at the University College, London, 1922. (5s. 6d. Conference Committee.)

The Report of the Conference of Educational Associations will naturally have a peculiar interest for all those who took part, whether as speakers or as listeners. But there must be a large number of other persons, teachers and parents, who were unable to be present, and would value a fuller and more compact account of the proceedings than was provided by the newspapers. For their information we may state that many of the most important addresses are printed in full, and that where summaries are given, they are usually full enough to be quite intelligible. Indeed some of the latter, including the synopses of Prof. Adams's four lectures to the College of Preceptors, are so good as to make one wish that the method of summary had been more widely adopted. In that case the price of the report might have been considerably less than the unpopular figure quoted above. We may add that we regard the interest of the report as much more than ephemeral. Years hence it will stand as a pretty comprehensive record, more readable than a formal treatise, of what was being thought and said by educational leaders in these days of mingled hopefulness and gloom. The hopeful side is represented by the activities of a numerous array of educational societies. The gloomy side is represented by Mr. C. F. G. Masterman's caustic but timely remarks on the Geddes report.

Letters on Education. By E. LYTTTELTON. (5s. net. Cambridge University Press.)

Dr. Lyttelton here falls back on a variant of the Socratic method and supplies us with a diagraph instead of a dialogue. The correspondents are two friends, one of whom is a wise old bachelor apparently of academic standing, the other a successful business man with three children ranging from eleven to eight. Henry, the parent, is in the position of disciple; James, the academic, in the place of master. Dr. Lyttelton does his best to make the correspondence live. All manner of variations of beginnings and endings are introduced. Even an occasional post card is interpolated, but somehow the dough will not rise: the correspondence will not come to life. The book is artistically a failure. On the other hand the subject matter is exceedingly

good, the tone everything that could be desired. It is true that there is not enough about education as such, and perhaps too much about religion in view of the title of the book. But nothing could be more important than the theme that forms the real subject—the Christian faith and its claims to dominate our social life. Written as they were supposed to be towards the end of the Great War, the letters practically deal with the problem of reconstruction, though Dr. Lyttelton does not like that term, and reminds us that "Christ never said, 'Mend the world,' but He did say, 'Teach it.'" It is in this spirit that the book is written, and it is in this spirit it should be read.

The Groundwork of Social Reconstruction. By WILLIAM GLOVER. (2s. 6d. net. Cambridge University Press.)

Mr. Glover has a rare gift for writing on a difficult subject in a manner which is popular in the best sense of the word. There is no playing to the gallery, and no shirking of difficulties inherent in the questions discussed. He has read widely and thought clearly, and his literary manner is as lucid as one could wish. If his former publication, "Know Your Own Mind" may be said to have had reference to the teacher's methods, the present one, "The Groundwork of Social Reconstruction," may be said to refer to the teacher's aims. Not to the teacher's only, however, but to the social reformer's generally. After explaining the need of preliminary studies, Mr. Glover devotes three chapters to showing what may be expected of social science, economics, and ethics respectively. Ethical aspects are then studied in somewhat greater detail under the heads of egoism, prudentialism, and idealism. The last chapter, on religion, is of special interest in these unrestful times. But the whole book is so marked by width of outlook and clarity of judgment that we have no hesitation in commending it to our readers' attention.

The Teaching of Handwriting. By PROF. F. N. FREEMAN. (5s. net. Harrap.)

"It is with unusual confidence," says the editor in his introduction, "that this volume on the psychology, physiology, hygiene, and pedagogy of handwriting is offered to the teaching profession." Even the most old-fashioned of teachers is bound to acknowledge that there is at any rate a hygiene of handwriting, i.e. that the posture of the learner matters a great deal in the long run. But if we are to have a science of education, there is evidently room for a more refined analysis of what is involved in handwriting than is involved in the rough-and-ready methods traditionally employed. Such an analysis, with its practical implications, is here provided. As the writer has aimed at completeness, not all that he says is equally new or equally important. The experienced teacher will turn with special interest to the discussion of the best type of movement for children in the "intermediate grades" (ages nine to eleven) when writing "with the arm as a whole," proper to younger children, is abandoned. Teachers in our elementary schools, and those responsible for their training, should take note of Mr. Freeman's thoroughgoing treatment of the whole subject. This branch of experimental pedagogy has hitherto received much less attention in England than in America.

Eugenics and other Evils. By G. K. CHESTERTON. (6s. net. Cassell.)

Mr. Chesterton's lively attack on Eugenics illustrates that most familiar feature of political and religious controversy, that we usually decide on non-rational or only partly rational grounds which side we shall espouse, and then proceed to marshal our arguments. It is obvious that Mr. Chesterton's whole soul revolts against the stud-farm theory of breeding human beings. And since the rather important little fact of ideal love enters more or less into human relationships, there is naturally a very great deal to be said against cold-blooded scientific Eugenics, and Mr. Chesterton says it with all his accustomed vigour and epigrammatic incisiveness. The merest tyro in the subject can see that his opponents can often score off him for his gay and irresponsible inaccuracies. And any sober-minded reader will have grave doubts when he perceives that in carrying war into the enemy's camp Mr. Chesterton goes the length of practically affirming that even defectives and imbeciles should be permitted to be fruitful and multiply. Still, it is important that both sides in this controversy should be heard to the fullest extent, and we are glad that Mr. Chesterton overcame his hesitation to issue his thunderous counterblast. He really makes no profession of having mastered the Eugenic case in detail, but, as we should have expected, bases himself upon the broad facts of elemental human nature. "Eugenics and Other Evils" is certainly a book to be read, and not least by teachers.

ENGLISH.

Preliminary English. By F. J. RAHTZ. (2s. 3d. Methuen.)

The forerunners of this book, "Higher English" and "Junior English" having proved their utility and reached their fourteenth and nineteenth editions respectively, their author was well-advised to issue a Preliminary course destined for younger pupils in secondary and private schools. A set of passages from standard writers, twenty-two in all, varying widely both in style and matter, but every one complete and worth reading in itself, with exercises in grammar and composition directly based upon each, still constitutes something of a novelty as an English course. In addition to those based on the text, there are more general exercises added to each chapter, so that by the time the book is ended the pupil will have worked through a well-planned scheme of the essentials of grammar and composition, and have gained some notion of derivation. One can safely say that this is a text-book which will be appreciated by the experienced teacher and with which the novice cannot go far wrong.

Forty Thousand Quotations, Prose and Verse. Compiled by C. N. DOUGLAS. (30s. net. Cape.)

This compilation is a revision of "Forty Thousand Sublime and Beautiful Thoughts." In point of number the collection is, we think, equal to Day's "Collaçon," and beats Dalbiac and Harbottle's volumes hollow, for these contain only some twenty thousand items. The superiority in point of quality, however, is more doubtful. Mr. Douglas's collection, though published in England, is of American origin, and American authors—not all of them of the first rank—occupy a somewhat disproportionate space. Some American institutions, too, such as Arbor Day, Independence Day, Lincoln's Birthday, loom very large. Another noticeable, but very agreeable, feature of the work is that the "quotations" are sometimes short extracts occupying half a column or more. An index of authors would have been much more useful than the index of subjects given at the end, for, as the items in the latter are in the same order as in the body of the work, it is not of special value. Thin paper is used in the volume, which is of very convenient size.

The Legacy of Greece. Edited by R. W. LIVINGSTONE. (7s. 6d. net. Clarendon Press.)

This volume is a splendid and triumphant vindication of the value of Ancient Greece to the world. Whether or not the study of the Greek language can maintain itself in schools and colleges, there can be no doubt of the vital importance of keeping before the minds of modern men the wealth of the legacy which has come to them from Athens the old. This book is admirably fitted to convey the required information and to make the necessary impression. It is a composite work of eleven capable scholars. After an introductory general sketch by Professor Gilbert Murray, it deals *seriatim* with Religion, Philosophy, Mathematics and Astronomy, Natural Science, Biology, Medicine, Literature, History, Politics, Art, Architecture. Few similar collections of essays published in recent times show a more complete unity or manifest so high a uniformity of excellence. Mr. Livingstone is to be congratulated on a fine piece of organization and editing.

GEOGRAPHY.

Historico-Geographical Monographs: The Historical Geography of the Wealden Iron Industry. By M. C. DELANY. (4s. 6d. net. Benn.)

The idea of publishing a series of research monographs giving the results of new and fresh works of an historical and geographical nature is a particularly happy one, and the editor of the series could not have chosen a more appropriate subject than this for the first volume. Geologically and geographically the Wealden area is carefully studied in many schools, but the past economic importance of the iron industry is usually dismissed in a few sentences. Here, however, the author gives us much interesting information as to the history of the industry, the distribution of forges and furnaces at various periods, and the reasons for the decline of the iron manufacture in the Weald. At the end of the text are three useful maps and a list of books for further reference.

Philips' Contour Map of Central Europe. Size 52 in. by 42 in. Mounted on cloth, dissected to fold in case. (27s. 6d.)

This map (scale 1 : 1,500,000) effectively coloured for highland and lowland, has Strasbourg as its central point. The new boundaries of Central Europe are indicated, the chief railways are marked with red lines and the names of important towns are clearly printed. The general reader as well as the student will find this map most useful for purposes of reference.

HISTORY.

The Story of the English Towns : (a) The City of London. By P. H. DITCHFIELD. (b) *Hastings.* By L. F. SALZMAN. (4s. net. S.P.C.K.)

These two volumes of the delightful S.P.C.K. Series on English towns have been brought to the same size, viz. exactly 126 pages each, by the opposite processes of extreme expansion in the one case and extreme compression in the other. Hastings was prominent as chief of the Cinque Ports in Norman times, and it became prominent in the nineteenth century as a fashionable watering-place. But except at those two periods its history was almost a blank, and it has taken Mr. Salzman all his skill to make his information spread out. He is, however, a clever and experienced writer, and he has performed his difficult task extraordinarily well. His joy is in the Middle Ages and on the Cinque Ports he has enlarged to profit. Mr. Ditchfield's trouble has been to condense into narrow compass the immense and unbroken mass of material which exists for the history of London from pre-Roman days down to the present. The fulness of his knowledge has enabled him to pick out essentials and to leave matters of minor moment. Hence he here presents an admirable introductory sketch of the City, and one which is sure to lure many readers to consult the list of larger authorities which he gives at the close of his fascinating narrative.

A Short History of the Irish People from the Earliest Times to 1920. By Prof. MARY HAYDEN and G. A. MOONAN. (20s. net. Longmans.)

There has long been a crying need for a good general history of Ireland. Existing accounts are for the most part marred either by ignorance or passion. Such scholarly and impartial studies as exist deal in elaborate detail with special topics and limited periods. The present volume to some extent supplies the need. It is well-informed, excellent in proportion, and within its scope complete. The one thing lacking is the spirit of scientific calm. It is written from "a frankly national standpoint," and from this standpoint it is impossible to see that a very strong case can be made out for English behaviour at almost every crisis in the long and troubled history of the Emerald Island. Probably, however, no one living at the present time in either England or Ireland is capable of writing Irish history dispassionately, and considering the fact that it has been written in Dublin during the years of conflict which culminated in 1920, it is surprising not that so much but that so little of the fury of Anglophobia should be present.

A Constructive Note book of English History. By E. H. DANCE. 7½ in. by 5 in. (3s. 6d. net. Basil Blackwell.)

This book supplies a valuable adjunct in the study of history in the senior forms of secondary schools. No one nowadays ascribes much educational value to the mere dictation of notes to one's class; and yet it must be admitted that few boys of fifteen or sixteen succeed in making useful notes for themselves. Mr. Dance provides the framework for a notebook: he indicates the important points in connexion with each topic, gives clear references to standard historical works (encouraging thus a wide range of reading), and provides blank pages, so that the student is carefully guided to construct his own notebook. The ground of English history is well covered, though it would have been an advantage to include more biographies of leading statesmen. An unfortunate misprint that occurs in the preface is likely to start a reader on a search for others further on.

MATHEMATICS.

A Short Algebra. By H. P. SPARLING. (2s. 4d. Bell.)

The preface states that "this text-book contains examples on the various stages of School Algebra whose knowledge is required in Physics, Trigonometry, and the Calculus." It is not a text-book, for it contains little but examples, instruction being left almost entirely to the teacher. Nevertheless it is probable that in capable hands it will fulfil a very useful function. Great prominence is given, and rightly so, to the formation, transformation, and evaluation of formulae, and, in fact, the section dealing with this subject forms the backbone of the book. We also like the sections on graphs and variation. They should help boys to acquire correct ideas regarding the meaning of functionality. It is a small book, but worth having.

The Teaching of Arithmetic in Theory and Practice, Including the Beginnings of Algebra and Geometry. By M. STORR. (3s. 6d. net. Sidgwick & Jackson.)

This is a book from which teachers in elementary schools may derive some useful hints. It possesses the merit of comparative brevity, it is not weighed down with psychological theory,

and there is a pleasing absence of the jargon which renders so much of the writing by professional educationists repulsive to the ordinary reader. Alternative methods of teaching the various arithmetical processes are very fairly discussed, and though we do not always agree with the author's preferences, his opinions are based on experience and merit respect.

Mathematics for Students of Agriculture. By Prof. S. E. RASOR. (16s. net. Macmillan.)

This is interesting as indicating the extent of the scientific equipment which agriculturists in the States and Canada now find it needful to possess. The course contains Algebra, Geometry, Trigonometry, Mensuration, and Elementary Mechanics. Its aim is not to turn the farmer into a mathematician, but to give him a knowledge of such mathematics as will assist him directly in his work, by the substitution of the economical processes of exact calculation for rule of thumb or trial and error. On the whole the matter included bears more or less directly on the farmer's business, but we wonder for what purpose he requires to know the volume of an ellipsoid.

MISCELLANEOUS.

Ancient Tales from Many Lands. By R. M. Fleming. (10s. 6d. net. Benn.)

Some years ago, in a lecture, Sir Harry Johnston urged the necessity of introducing into our schools a study of Ethnology; but, in spite of its prospective value, an additional subject seemed then an impossible weight to add to the already overburdened teacher. From Miss Fleming's fascinating work, however, one sees how much might be taught incidentally, illuminating not only the Geography and History, but Scripture, Art, and even Literature lessons, and preparing the child's mind unconsciously for the reception of the idea of the essential unity of peoples, in spite of their surface diversities, and helping forward that ideal of tolerance and understanding of other races which should be a perpetual aim in all education. The most valuable portions of the book are the concluding chapters, in which the author expounds with understanding and enthusiasm the uses to which folk-lore can be put in the teaching of History and Geography, and gives a long list of further suggestions for tales not given in this volume. Such a work enlarges the horizon of possibilities of the ordinary teacher, who has usually little leisure for a survey of the region lying round the subject in which he is daily engrossed.

The Chronicles of Dawnhope. By G. F. BRADY. (7s. 6d. Heinemann.)

The sub-title of this book, "The Story of an up-to-date Public School," will suggest to the intelligent reader the nature of its contents. The great Dr. Tregarra, a heaven-born educational reformer, happily nicknamed "Gas-bags" by his pupils, takes over a derelict grammar school and founds there a community of masters and boys (one ought not to call it a school) in accordance with the very latest theories. His prospectuses begin with the phrase which during recent years has done such splendid service, "The War has taught us." One of his staff converts him to Psycho-analysis and the very latest theory of dream-interpretation, and the exploitation of this weakness by a smart young rogue is a capital joke. Freud and his disciples certainly offer a magnificent target for the humorist. But the fun is most fast and furious when the scheme for governing the school by an elected committee is put forward. There is much other very excellent fooling.

The Year-Book of the Universities of The Empire, 1922. Edited by W. H. DAWSON. (7s. 6d. Bell.)

This valuable Year-Book in its new issue has been enlarged by more than eighty pages. The historical summary has been written afresh and at greater length. Some additions have been made to the list of academics, notably under "India," where the Universities of Aligarh (Muslim), Lucknow, Osmania (Hyderabad), and Rangoon, recent foundations, now for the first time, appear. In the Appendices are printed the Provisional Regulations that govern the granting of commissions in His Majesty's forces to university candidates. The attractiveness of the universities and university colleges in the United Kingdom to students from overseas is exhibited, in a special section, by some striking figures; from Africa there came 1,187, from America 781, from Asia 1,576, from Europe 645, from the Pacific 281, or in all 4,470. Those who may think of entering themselves at some English university will find the conditions of admission clearly stated in Appendix xxiii. of this book. The account of foreign universities given in a later Appendix, fuller than that supplied last year, is still incomplete, and "pending the resumption of more normal international relations,

universities of the late enemy countries have not yet been included." As to the United States, the term "university" is used there with ill controlled freedom, and a Chicago correspondence college which bestows its own degrees has lately been offering them in England—to the regret of genuine American graduates—under the style of the "Lincoln-Jefferson University." Such as wish to defend themselves against bogus American degrees and pinchbeck graduates will find serviceable information in the Year-Book (pp. 600 ff) where a catalogue of institutions approved by the Association of American Universities is drawn up. Indeed, the whole work is of the sort indispensable in the academic world.

MODERN LANGUAGES.

Cambridge Guides to Modern Languages.—*A Manual of French.* By H. J. CHAYTOR. (4s. net. Cambridge University Press.)

Mr. Chaytor's Manual is intended for private students who wish to learn to read French. The work begins with four pieces of simple French, with an interlinear translation. Then follow twenty-eight, with the translation appended and notes on grammatical points; and finally four, without a translation. There is a short summary of grammar at the beginning, and a vocabulary of words which are likely to prove difficult. The pieces are well chosen, and the renderings are careful and scholarly, but the gradient seems to us rather steep; in other words we think the increase in difficulty is too rapid. Such authors as Taine and Michelet are not suitable for learners; they ought rather to be kept till the student can read French with ease. It is one of the advantages of a modern language that the classics need not be read before they can be read with ease.

Mon Petit Livre Français. By CLARA S. DOLTON. (2s. Longmans.)

This little work is a mixture of the old and the new. There are lessons of the usual type, with pictures, but each lesson is preceded by a French-English vocabulary and followed by rules of grammar, and English sentences for translation, as well as by "direct method" exercises. There are some useful lessons in pronunciation; in these, phonetic symbols are used, but in the body of the work the ordinary script alone appears.

La Douce France. By RENÉ BAZIN. Abridged and Edited by LOUIS LATOUR. (3s. 6d. Methuen.)

It was a happy thought to issue an abridged edition of René Bazin's excellent book for the use of our schools. It has the great advantage of presenting not the cosmopolitan side of French life, but what is intimately national, redolent of the soil. Bazin speaks as one who knows the countryside and understands and loves country folk. His outlook on life is sound and sympathetic; and he is imbued with strong religious feeling, as is manifest in his chapters on "Les Religieuses," on the childhood of Joan of Arc, on Religious Festivals. Within the confines of a short chapter, he throws light on important aspects of French history; and he provides admirable sketches of the miller, the postman, the blacksmith, and so on. The book is enriched by an excellent photograph of the author, who has also contributed a preface addressed to the "écoliers du Royaume-Uni," and a map of France. The notes contain useful accounts of the persons mentioned in the text, of historical allusions, &c.; they also provide a large number of renderings that could be obtained from any dictionary, and questions of the "why subjunctive?" type, which might well have been left to the teacher. The number of misprints is small; we have noted "toute" (p. 3, line 23), "ressemble" (p. 20, line 27), "habitudes" (p. 55, line 1), "des-quels" (p. 55, line 21), "davant" (p. 69, line 26), "un partie" (p. 73, line 3), "élève" (p. 79, line 20), "aucume" (p. 105, line 30), "monsieur" (p. 123, line 8).

Heath's Modern Language Series.—*Canción de Cuna.* Por G. MARTINEZ SIERRA. Edited, with Direct Method Exercises, Notes, and Vocabulary, by Prof. A. M. ESPINOSA. (3s. net.)

This is a suitable and well edited text, with an excellent introduction, and exercises which should prove suggestive to the teacher.

A Dictionary of Spanish Idioms with their English Equivalents. By LEONARD WILLIAMS. (3s. 6d. net. Routledge.)

This phrase-book is likely to be of considerable use to students of Spanish who have sufficient grasp of the language to choose for themselves among the idioms presented to them, avoiding those which are antiquated or over-colloquial in favour of those in general use.

RELIGIOUS KNOWLEDGE.

- (1) *The Pilgrim's Progress.* By JOHN BUNYAN. An Edition for Children, arranged by J. M. MATTHEW. (10s. 6d. net. S.P.C.K.) (2) *The Patriarchs.* By E. B. TRIST (Mrs. WM. C. PIERCY). (1s. 9d. net. S.P.C.K.) (3) *The Chosen People: Moses, Judges in Israel, David.* By E. B. TRIST (Mrs. WM. C. PIERCY). (4s. 6d. net. S.P.C.K.) (4) *SS. Peter and Paul.* Depicted by H. J. FORD. With Notes on the Pictures by W. K. L. CLARKE. (3s. 6d. net. S.P.C.K.)

(1) This abridged edition for children of "The Pilgrim's Progress" is one from which the long conversations on theological points, which often deter young people from reading the original, are eliminated. The illustrations are most spirited. Where so much lends itself fittingly to pictorial representation, however, the too realistic and gruesome picture facing page 118 might well have been omitted for the sake of the sensitive child whose dreams are often troubled by scenes of horror. This book should have a place in every boarding-school library, as well as on the nursery shelves at home.

(2) (3) If for no higher reason than that without this knowledge numberless allusions in general literature, and even much of our common figurative language, would be a sealed book to him, the child must be made familiar with the Bible stories. These two books, with their large, clear print and pleasing pictures, should tempt even young children to read the old tales; and the morals drawn from these are so unobtrusively interspersed that the little reader will hardly be conscious that there is any lesson concealed. In any future edition the illustration on page 6 of "The Chosen People" ought to be omitted; it is repellent, and is in no way necessary to the understanding of the text.

(4) "SS. Peter and Paul" is an account, from the orthodox Anglican point of view, of the Acts of the Apostles, told mainly in a series of fine pictures.

The Biblical History of the Hebrews to the Christian Era. By Dr. F. J. FOAKES-JACKSON. Fourth Edition, enlarged. (10s. net. Heffer.)

The new edition of Dr. Foakes-Jackson's well-known manual includes two new chapters dealing with Jewish History to the Christian Era (Chapter XV), and Jewish Literature and Life (Chapter XVI), by which some fifty pages are added to the bulk of the volume. These, if somewhat sketchy, will be found very useful in introducing the beginner to the study of this important period "between the Testaments." As the author rightly says: "The Biblical history of the Hebrews may seem to cease with Ezra or Malachi; but the history of the Bible by no means concludes so early. For much that is contained in the Old Testament is only intelligible to those who have some knowledge of the interval between the close of its story and the opening of that of the New. It was, moreover, during this period that many of the canonical books were assuming the form in which we now possess them, and that spiritual ideas were growing up which shaped the course of the great development of the religion of the Old Testament, known as Christianity. Nor is some of the literature which must be studied entirely un-Biblical. The so-called Apocrypha is reckoned as Scripture in many parts of the Christian Church, and ought still to form an integral part of the English Bible." The corpus of notes which comes at the end of the book contains much that is important by way of additional references. The manual has already well proved its usefulness, and in its enlarged form will continue, we are sure, its successful career.

SCIENCE.

Practical Physics. 8th Impression. 2nd Edition. By W. R. BOWER and Dr. G. SATTERLEY. (7s. University Tutorial Press.)

This treatise on practical physics, adapted to the capabilities of matriculated students, but assuming no previous work in the subject, well maintains the reputation for lucidity and accuracy of the series to which it belongs, and for that reason is already known to teachers of science. The needs of the private student and, indeed, of other enterprising students as well, are met by the provision of "home experiments" not requiring elaborate apparatus. In this new edition a supplement has been added describing experiments that have gained prominence since the book first appeared.

Pitman's Mastery Series. *The Mastery of Fire.* (3s. net. Pitman.) *The Mastery of Air.* (3s. net. Pitman.)

These books are two out of four which take their titles from the "four elements" of the ancients, and seek to show how man has gradually acquired a "mastery" of earth, air, fire, and water, both in understanding them and in using them for his own purposes. The books demonstrate what every

(Continued on page 310.)

METHUEN & CO., LTD., 36 Essex Street, LONDON, W.C. 2.

teacher knows, that in the teaching of science there is a place, not only for the methods proper to the laboratory, but also or interesting and lucid description. There will always, we suppose, be people who hold that one has no right to know what one has not discovered for oneself, but these out-and-out advocates of "heuristic" methods have probably had their day. These books, simply written, well illustrated, clearly printed, and strongly bound, will certainly appeal to boys interested in knowing how things happen and how things are done. And, to judge from our own experience, adult readers may also find in them both instruction and entertainment.

The Foundations of Chemical Theory. By Prof. R. M. CAVEN. (12s. 6d. net. Blackie.)

By this time a considerable number of generations of chemical students must have been brought up on Caven and Leader's "Systematic Inorganic Theory," and consequently a sequel which discusses the fundamentals of chemical theory will be assured of a welcome. As the author wisely indicates, the degree course in physical chemistry is a serious thing, and, unless the student has a solid foundation of elementary theory, little profit can be gained from the more advanced lectures. Dr. Caven suggests that the book be read at the end of his second-year course—not only to knit together his chemical knowledge already attained, but also as a preliminary to his more specialized third-year work. The earlier chapters deal with the Laws of Combination and the Determination of the Atomic, Molecular, and Equivalent Weights. A very excellent section on the Periodic Law follows, and then the simpler proper ties of matter are discussed with obvious brevity. Elementary ideas on equilibrium, catalysis, thermal decomposition, and the chief types of chemical change are discussed adequately, and a brief account is given of the more important properties of colloids. With a useful chapter on equation building the book concludes. There appears to be an omission on page 178, in which bismuth hydride is not placed in the list of hydrides of the trivalent elements. The book is beautifully printed and got up.

The Experimental Basis of Chemistry. By I. FREUND. Edited by A. HUTCHINSON and M. B. THOMAS. (30s. net. Cambridge University Press.)

The editors of the late Miss Freund's work are to be congratulated on having carried to completion a great contribution to the critical discussions of the fundamental principles of chemistry. The author had achieved a well deserved success in her well known "Study of Chemical Composition," which "carried her influence as a teacher far beyond the limits of her own laboratory," and the present volume, which comprises the ten chapters which were prepared by Miss Freund, will assuredly maintain her reputation as a clear, incisive, and accurate thinker. The book was projected in twenty chapters, and the part unfinished was to have discussed water, oxygen, hydrogen, acids, bases, and oxides, oxidation and radiation, and the conditions which modify chemical change. The actual matter which the editors have been able to put forward deals with the nature of chemical change, the classification of substances into elements, mixtures and compounds, air and combustion, the conservation of mass, and the laws of combination. There is a wealth of novel matter in these apparently hackneyed chapters. Most ample quotations from original papers are given, and really the book is a valuable contribution to the historical development of the science. As a running commentary to this sequence of discovery there is a series of well devised experimental matter, and, although it would be perhaps a counsel of perfection to recommend the work as a text-book or a student's manual, the reviewer has not the least hesitation in insisting that no conscientious teacher can afford to miss it.

British Insect Life. By EDWARD STEP. (10s. 6d. net. Laurie.)

This interesting account of the several orders of British insects, with descriptions of the appearance and habits of the commonest species, will be useful to gardeners, teachers, and amateur naturalists for reference. Helps to identification are provided by 32 plates from photographs. The book runs to 264 pages, and is commendably free from padding; but many readers will regret that the author, without sacrificing the popular character of the work, did not find room for more details of the essential structural features and the biological peculiarities of insects. The account of the chitinous exoskeleton, given on page 10, is likely to mislead the beginner.

POETRY.

Poems of Home and Overseas. Compiled by CHARLES WILLIAMS and V. H. COLLINS. (3s. net. Clarendon Press.)

This is a very charming collection. Of the 160 pages, England occupies 133, the poems being arranged in four groups. "In

Praise of England," "Merry England," "The English Land," and "Places." A good number of old favourites are included, but the editors have pillaged many less known authors, and added some choice booty to their store. Nature and the quiet life are the most favoured topics, but a few martial pieces are included. The Overseas section touches all the Dominions, and mirrors something of the life of each. We wish the editors had chosen "The Wreck" or "The Sick Stockman"—two admirable vignettes of Australian life, from Adam Lindsay Gordon—rather than the "Australian Verses."

The Fairy Green. By ROSE FYLEMAN. Fifth (School) Edition. (1s. 6d. Methuen.)

This is a thin volume of facile verses, mostly lacking in distinction, though "Mrs. Brown" and one or two others in "A Little Girl" have a quaint touch. It is an edition for schools, but one cannot help thinking that a study of old-established favourites would be of greater profit to our younger pupils than to waste their time on such poor productions as are many of these.

TO ASSISTANT MISTRESSES.

September (1922) Vacancies.

Graduates, Undergraduates, and other well qualified Senior and Junior Mistresses, and Music, Kindergarten, and other Teachers seeking appointments in Secondary and high-class Private Schools (Boys' and Girls') for the term commencing in **September** are invited to apply at once to Messrs. GRIFFITHS, POWELL & SMITH, as above, who will send immediate notice of all the most suitable Posts.

Candidates should state full details as to their qualifications, and enclose copies of testimonials.

GENERAL.

WEST INDIES, ASSISTANT MISTRESS. Inter. Science (Lond.) or Cambridge Higher Local. Latin, French, or Spanish, Mathematics, and English. Salary £200 resident. Required to commence work in September next.—No. 1,406.

ASSISTANT MISTRESS, Graduate, for Latin up to adv. Scholarship standard. Salary according to Burnham Scale. (Wales.) Extra for 1st Hons. Wanted in Sept. Recognized Public School.—No. 1,459.

ASSISTANT MISTRESS for large Day School near London. Recognized by Board of Education. Subjects—Geog., Botany, French, and Latin. Graduate looked for. The post is non-resident and Salary according to qualifications and experience.—No. 1,577.

THREE ASSISTANT MISTRESSES (resident or non-res.) for High Class Boarding School at seaside (Hants). (1) Graduate for History and Literature. (2) Geography, Botany and some Science. B.Sc. or one who has passed some good exam. (3) Graduate of Oxford, Camb., or Lond. for Mathematics and Latin. Salaries according to Burnham Scale.—Nos. 1,573-5.

THREE SENIOR ENGLISH MISTRESSES wanted, one for Vth Form, one for Form V, and one for Form IV. Must be able to take the following subjects between them. Drill, Games, Latin, Maths., and Geog. Salaries according to qualifications and experience. (Yorks.)—No. 1,571.

ASSISTANT MISTRESS wanted to take Mathematics and History to Senior Oxford Local standard. Salary £120 res. (Lancs.)—No. 1,570.

THREE MISTRESSES wanted for Public Schools in W. of England. (1) Assistant Mistress teaching Hist. and Eng. principally. (2) Senior English Mistress, Hons. Graduate with training or experience preferred. (3) Senior Mistress for Botany and Physics. Salaries according to Burnham Scale dependent on recognized service, etc.—No. 1,558-60.

ASSISTANT MISTRESS wanted for Girls' Public High School in London. Graduate for General Form subjects. Salary in accordance with Middlesex Scale (i.e., Burnham Scale, Lond. area.)—No. 1,557.

ASSISTANT MISTRESS wanted for French and Botany in Upper Forms. Teaching hours, 22 per week, light supervision. Salary £100 resident. (Suffolk.)—No. 1,556.

ASSISTANT MISTRESS wanted for Modern Languages. The post is non-resident and Salary according to qualifications and experience. (Ireland.)—No. 1,555.

ASSISTANT MISTRESS (Graduate) for Latin and English. Should have had some years' experience in Secondary Schools. Salary according to qualifications. Convent School in Wales.—No. 1,550.

ASSISTANT MISTRESS wanted for High Class Boarding School (recognized) in Sussex. Classics chiefly with Elem. Maths. Salary £150 resident.—No. 1,542.

CANADA, HEAD MISTRESS wanted with good academic qualifications and experienced in administration. Must be an Anglican with definite convictions. Salary up to 2,500 or 3,000 dollars with board and residence.—No. 1,539.

ASSISTANT MISTRESS wanted in Sept. for French, Latin, and Geography to Matric. standard. Graduate looked for. Salary £120 resident. (Yorks.)—No. 1,527.

ASSISTANT MISTRESS (Graduate) wanted in Sept. for Mathematics. Secondary School. Salary according to Burnham Scale. (Notts.)—No. 1,530.

ASSISTANT MISTRESS for Dual School. Experienced, essential subjects, History, Latin, and Mathematics. Salary £120 resident.—No. 1,531.

S. AFRICA, ASSISTANT MISTRESS for French to Matric standard, Eng., Lang., and Lit., History, Scripture, and Geography. Salary £150 resident.—No. 1,532.

FORM MISTRESS wanted in Sept. for Public Grammar School in I.O.M. Qualifications in Drawing desirable. Salary according to Burnham Scale.—No. 1,536.

HONS. GRADUATE in History wanted in Sept. R.C. essential. Salary according to Metropolitan Burnham Scale. School in E. London.—No. 1,537.

ASSISTANT MISTRESS (R.C.) wanted for Convent School in the Midlands. English and Latin to Matric. standard. Graduate looked for. About 4½ hours' teaching per day. Salary £120 resident.—No. 1,482.

ASSISTANT MISTRESS wanted in Sept. for French (Phonetic system by preference). Salary up to £120 resident. (Hants.)—No. 1,513.

SENIOR MISTRESS wanted in Sept. to take French throughout the School. Salary according to Burnham Scale.—No. 1,535.

ASSISTANT MISTRESS (Graduate) wanted in Sept. for History, with one subsidiary subject. Public High School. Salary according to Burnham Scale. (Staffs.)—No. 1,516.

CANADA, ASSISTANT MISTRESS wanted in Sept. for Drawing and Painting with very junior Arith. and English. Church of England Boarding School. Salary up to £150 resident.—No. 1,518.

ENGLISH MISTRESS wanted in Sept., should have good Hons. Degree with either training or experience, and one who is specially interested in Modern methods of teaching English. A mistress with Classical Degree not objected to, so long as she is really interested in methods of teaching English. Public School in Wales.—No. 1,519.

SENIOR ENGLISH MISTRESS wanted in Sept., all English subjects, Latin and Composition. Salary according to qualification.—No. 1,506.

ASSISTANT MISTRESS wanted, capable of taking a Form of girls up to 16 years of age in all subjects, including Elem. Latin and French. Salary £100 resident. (Midlands.)—No. 1,507.

ASSISTANT MISTRESS wanted in Sept. for Mathematics and Botany to Matric. standard. English and European Hist. qualifications. Inter. B.Sc. or equivalent. Salary £120 resident. (Hants.)—No. 1,512.

CLASSICAL MISTRESS wanted for Public Endowed School in Wales. Salary £140 to £160 resident.—No. 1,469.

MATHEMATICS and SCIENCE

SCIENCE MISTRESS wanted (B.Sc.) for Physics and Chemistry, Maths. des. Salary according to qualifications. Convent School in Wales.—No. 1,549.

Also MATHEMATICAL MISTRESS wanted for same School. Salary according to qualifications.—No. 1,551.

ASSISTANT MISTRESS (Graduate) for Botany and Elem. Maths. Salary up to £150 resident. (Kent.)—No. 1,547.

ASSISTANT MISTRESS (Graduate if possible) for advanced Maths., Physics, and Chemistry. Salary up to £150 res. The School is recognized by Board of Education. (Kent.)—No. 1,546.

ASSISTANT MISTRESS wanted for High Class Recognized School in Sussex. Subjects, Botany and Geography. Teaching hours 16-20 per week. Salary according to qualifications.—No. 1,543.

ASSISTANT MISTRESS (B.Sc.) wanted, capable of teaching Botany to Matric., also Mathematics. R.C. essential. £150 resident. (Bucks.)—No. 1,541.

SCIENCE MISTRESS wanted in Sept. for Public High School. Salary according to Burnham Scale. (Staffs.)—No. 1,514.

SENIOR MATHEMATICAL MISTRESS wanted for Girls' Public High School. Cambridge woman by preference. Salary according to Burnham Scale.—No. 1,568.

ASSISTANT MISTRESS for part or full time, resident or non-resident. Chemistry, Botany, Elem. Physics. Degree or equivalent necessary. Salary according to Burnham Scale. Well known School near London.—No. 1,567.

MUSIO.

GOOD MUSIC MISTRESS wanted for School in Scotland. Piano I.R.A.M. Theory and Harmony. Also a good Violin Mistress with degree if possible and same for Piano. Salaries according to qualifications and experience.—No. 1,404.

SENIOR MUSIC TEACHER able to prepare for Exams. Should hold a Diploma and have had Boarding School experience. Salary £80 resident. (Yorks.)—No. 1,572.

MUSIC MISTRESS for Piano (Matthay or Curwen) Musical appreciation, etc., L.R.A.M. or equivalent. Salary £100 res. (Yorks.)—No. 1,526.

KINDERGARTEN.

KINDERGARTEN MISTRESS wanted capable of taking charge of 30-40 children, ages 5-9, with an assistant to help. Salary £80 resident. (Lancs.)—No. 1,395.

KINDERGARTEN MISTRESS wanted for Convent School in Surrey. R.C. by preference. Salary according to qualifications.—No. 1,389.

JUNIOR FORM MISTRESS wanted for junior dept. children, 5-7. Drawing to standard of Div. IV, R.D.S. Salary about £100 resident. (Devon.)—No. 1,349.

KINDERGARTEN MISTRESS wanted for School in Scotland. Drawing and needlework necessary. Salary £100 resident.—No. 1,576.

KINDERGARTEN MISTRESS wanted with Higher Froebel Certificate, for large Day School near London. Recognized by Board of Education. Non-resident. Salary according to qualifications, etc.—No. 1,578.

PHYSIOAL.

PHYSICAL MISTRESS, for Drill, Dancing (all styles), Games, Swimming, &c. Required at Easter or in September. Salary according to qualification. (Dorset.)—No. 1,497.

GYMNASTIC MISTRESS wanted for Public Endowed School in Wales. Salary £140 to £160, resident.—No. 1,470.

PHYSICAL MISTRESS for Swedish Drill, Remedial Exercises, Games. Salary £100-£120, resident. (Herts.)—No. 1,456.

PHYSICAL MISTRESS wanted for Gymnastics, Swedish Drill and Games. Salary £80 resident. Recognized School. (Cheshire.)—No. 1,569.

Mistresses seeking posts for **SEPTEMBER** next should apply **AT ONCE** to Messrs. Griffiths, Powell & Smith in order that they may be regularly informed of suitable vacancies as they come to hand. No preliminary fee is charged.

12 & 13 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C. 2.

Telegraphic Address : "Scholasque Rand, London."

Telephone : Gerrard 7021.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.
CONSTITUTED BY ORDER IN COUNCIL, 29th FEBRUARY, 1912.

TEACHERS ARE REMINDED THAT THE PERMANENT CONDITIONS OF REGISTRATION ARE NOW IN FORCE. ALL APPLICANTS FOR REGISTRATION ARE REQUIRED TO PRODUCE EVIDENCE OF ATTAINMENTS, TRAINING IN TEACHING, AND EXPERIENCE AS PRESCRIBED BY THE COUNCIL.

For a limited period the requirements as to Training in Teaching may be modified in special cases. There is now no Minimum Age Limit, and the present fee for Registration is a single and final payment of two pounds.

Those who cannot satisfy the conditions prescribed by the Council for admission to the official Register of Teachers may apply to be admitted to the OFFICIAL LIST OF ASSOCIATE TEACHERS which is now maintained by the Council. Admission to this list is intended to serve as a preliminary to full registration.

Over 73,000 Teachers have applied for Registration.

Teachers who are not already Registered should apply at once for particulars and a form of application, which may be obtained from

THE SECRETARY,
TEACHERS REGISTRATION COUNCIL,
47 BEDFORD SQUARE,
LONDON, W.C. 1.

BELL'S NEW TEXT-BOOKS

MATHEMATICS

Elementary Plane and Solid Geometry.

By V. LE NEVE FOSTER, M.A.,
Eton College. Vol. III. Solid Geometry. Ready shortly.
3s. 6d. Vols. I and II previously published. 3s. each.
[Bell's Mathematical Series: General Editor, Professor
W. P. MILNE, D.Sc.]

As in the two previous volumes, the theoretical and practical aspects of the subject are developed *pari passu*. Solid Geometry is usually found an extremely difficult subject, but in the present volume ample practice is given in numerical work applied to simple and obvious figures in space, so that the pupil approaches the formal propositions with his mind well stocked with concrete examples of the figures and properties of Solid Geometry, and is therefore in a better position to understand them.

A Short Algebra.

By H. P. SPARLING, M.A.,
Assistant Master at Rugby School. 2s. 4d.

Contains examples on the various stages of School Algebra, knowledge of which is required in Physics, Trigonometry, and the Calculus. To attain this end within so small a compass, verbal explanation of straightforward processes has been left to the teacher. The exercises on these are all simple and will be found sufficient. Except for the Calculus, the book will be found to cover fully the ground of the School Certificate Examination of the Oxford and Cambridge Joint Board.

SCIENCE

Readable School Physics.

By J. A. COCHRANE, B.Sc. With 8 plates and over 60 illustrations in the text. 2s. 4d.

[Bell's Natural Science Series: Editor, E. J. HOLMYARD, M.A.,
Head of the Science Department, Clifton College.]

This book is an attempt to humanize elementary physics without popularizing the subject. Theory has been given the main prominence. Experiments have not been described unless to elucidate principles. References to the makers of scientific history are frequent, and connexion with the pupil's own experience is established as often as possible. It is believed that the book will prove a valuable adjunct to the practical work in the laboratory. In addition to the numerous illustrations in the text portraits are included of eight of the most celebrated pioneers in physics.

Introduction to Organic Chemistry.

By D. LL. HAMMICK, M.A., Fellow and Lecturer of
Oriol College, Oxford. 5s. net.

"The book is essentially readable throughout, and it would be difficult for any one who has worked carefully through the text and the experiments not to have had his interest and even his enthusiasm aroused. . . . Mr. Hammick has succeeded in condensing the elements of organic chemistry into small compass with great skill."—*Science Progress*.

First Lessons in Practical Biology.

By E. W. SHANN, B.Sc., F.Z.S., Biology Master at
Oundle School. With 71 illustrations. 5s.

[Ready immediately.]
Intended to meet the need for an elementary book suitable for the lower fifth forms who are ready to begin the serious study of Biology. The author's aim is to inculcate habits of accurate observation, of concise description, and of intelligent reasoning, as well as to create a background for the further study of Biology. All the objects chosen for study can readily be obtained (for the most part without cost) and no expensive apparatus is required.

A Book for All Teachers

THE DALTON PLAN

By HELEN PARKHURST.

Ready immediately. Price 4s. 6d. net.

Not since the introduction of the Montessori Method has such general interest been evinced in any educational reform as in Miss Parkhurst's Dalton Laboratory Plan. Miss Parkhurst has now prepared an authoritative handbook on the Plan, containing, in addition to a full exposition, answers to many questions which have been put to her on points of detail, and suggestions for the application of the plan to various types of schools.

A chapter on the working of the Plan at the County Secondary School for Girls, Streatham, has been contributed by the Headmistress, Miss Rosa Bassett, M.B.E., B.A., who has also added some specimen assignments adapted to the needs of English Schools.

DIVINITY

A Short History of Our Religion from Moses to the Present Day.

By D. C. SOMERVELL, M.A., Master at Tonbridge School.
Second Edition. 6s. net. Also in four parts, bound in
Manilla covers, 1s. 6d. each.

The Rev. C. A. Alington, D.D., Headmaster of Eton, writes: "I think it admirable. It seems to me to have been written in exactly the right tone and temper. . . . I really feel the greatest admiration for the way in which you dealt with a mass of facts without letting them become either disjointed or dull. . . . I should think the book ought to be of the greatest use in getting Divinity decently taught."

"A masterpiece. . . . Every page is terse, to the point, full of apt and witty illustration."—*Theology*.

ENGLISH

A Book of Verse.

Chosen for Students at
Home and Abroad by Sir HENRY NEWBOLT. 2s.

The aim of Sir Henry Newbolt's new anthology is to furnish an introduction to English thought and language. The poems he has selected are broad and universal both in subject and mood. Modern poetry is well represented, a large number of the poems being copyright.

"Teachers will welcome this delightful book of verse, and will find inspiration in it."—*Scottish Educational Journal*.

A Letter Book.

Selected and Introduced by
GEORGE SAINTSBURY. Fourth Impression. 6s. net.

"No lover of letters in any sense of the word could fail of delight in reading this book. . . . Prof. Saintsbury's happy touch in discursive commentary is so famous, that to proclaim it here happier than ever says more than elaborate praise."—*Times*.

"The most scholarly of small books on a notoriously enchanting subject."—*Punch*.

FRENCH

Nouveaux Contes Français.

By
MARC CEPPI, Senior Modern Language Master,
Victoria College, Jersey. 2s.

The success of Mr. Ceppi's "Contes Français" (with or without vocabulary, 2s.) has induced him to prepare a similar volume. The tales are short, bright and attractive. They are written in simple French, and carefully graduated. Much care has been taken in the use of tenses: one story is written entirely in the present tense, another in the future, a third introduces the conditional present, &c. There is a full vocabulary and carefully prepared questionnaire and exercises (including re-translation).

Concise French Course.

By P. DESSAGNES,
Professor at the Lycée Louis le Grand, Paris. 2s. 6d.

This course is intended to meet the needs of older students and for use in evening and continuation schools. The rate of progress is much more rapid than in ordinary school courses; essentials only are dealt with, and the exercises are on a novel plan. Much of the subject matter is based on simple scientific experiments. The book is well illustrated, and there is a French-English vocabulary. The original French edition has been carefully revised and adapted to the needs of English schools by Mr. Ceppi.

A New Series of Post-War Atlases

BELL'S SCHOOL ATLASES

published in association with "Geographia," Ltd.

BELL'S POPULAR ATLAS. 32 coloured plates. Size
9½ × 7½ in. 1s. 3d. net; stiff boards, 1s. 9d. net.

BELL'S BOLD TYPE ATLAS. 40 coloured plates.
Size 9½ × 7½ in. 1s. 6d. net; stiff boards, 2s. 3d. net.

BELL'S MODERN ATLAS. 48 coloured plates. Size
11 × 8½ in. 2s. 9d. net; stiff boards, 3s. 6d. net.

These atlases incorporate all the recent territorial changes, and are based on the most approved principles of cartography. Prospectus on request.

Messrs. Bell's new Text-Book Catalogue (Spring, 1922) is now ready

A copy will be sent post free on application to—

OCCASIONAL NOTES.

THE Conference of representatives of the Universities of Great Britain and Ireland, which met in London on Saturday, May 13, discussed several topics of importance to educationists generally. Two in particular are of special interest to teachers. The first arose in the discussion on the subject of research in the British Universities when the Vice-Chancellor of the University of London referred to the large number of students who entered the University with the intention of becoming school teachers. He believed that the Burnham Scale would in future exercise a powerful influence on the lines of study the students would pursue in the university. At present the Scale offered additional emoluments to those who took a good honours degree. He was not altogether certain that this was wise. Nevertheless he believed that extra emoluments should come to the student who took a second or higher degree. He hoped that all would urge upon the Board of Education the immense necessity of higher degrees counting for increased emoluments as much as, if not more than the first degree. In this we agree with Sir Sydney Russell Wells, and are not surprised to learn that the Conference gave general acceptance to this view. In our opinion every encouragement should be given to advanced study or research leading to a higher degree. It seems absurd to limit such financial rewards to students who take honours in their first degree while withholding them from those who take a higher degree involving advanced study and investigation.

THE next topic had regard to residence in Universities, and was introduced by the Vice-Chancellor of Leeds University, who put in a strong plea for an increase in residential accommodation in the newer Universities. He thought that in these there were to be seen the beginnings of the growth of a college tradition side by side with the University tradition. While in the aggregate only one out of every seven of their students was in residence, it was significant that there had been an increase of no less than 17 per cent in residential students during the last twelve months. The number of women students in residence was one out of every four. He was glad to say that there was an increasing tendency on the part of the men to enter into residence, and was inclined to think that this was due in part to the training in corporate life now given in the schools. He expressed himself as being strongly against isolating in any one hall students who were preparing themselves for one profession, and he would favour the system of separate, though small, study-bedrooms. Those who are in intimate touch with college or hostel life will agree with Sir Michael Sadler. The lack of collegiate life is a distinct loss to the student. But it is far from desirable to segregate any particular class of student, such as the future teacher. Students of all classes should freely intermingle. One welcomes some approximation in the modern Universities, however small, to the collegiate life which is so strongly characteristic of Oxford and Cambridge.

THE Education Estimates this year, as the President, stated, differed from previous submissions in two main particulars. They are rationed and also reduced.

In regard to the "ration," the operation of keeping expenditure within the limits imposed by the Treasury and accepted by the Board of Education is a little more complicated than that of cutting a coat according to the cloth. The Government is already pledged to allow the chief dimensions of the garment to be several sizes larger than last year, so that retrenchment will have to be made on the linings and trimmings. We are of opinion that Mr. Fisher, and his advisers, have exercised considerable skill in performing this difficult task, and his statement should reassure Local Authorities that they will be able to "carry on" without any serious interference with the essentials of efficiency. Compared with the estimates of last year, Mr. Fisher anticipates a net reduction of a little over six millions. Of this sum, nearly one million and a quarter is available owing to the termination of courses of training for men who served in the war, while more than two and a half millions is represented by the proposed contribution, now to be discussed by a Select Committee, from elementary and secondary teachers in respect of their pensions. Of the remaining two and a half millions, it appears that last year, instead of spending £51,000,000, the Board's expenditure barely exceeded £48,000,000, and it is assumed that the economies which rendered possible this reduction will be maintained. The estimated expenditure of Local Authorities on Elementary Education is £62,450,000, about half a million less than that of the previous year. An addition of £1,232,000 in respect of Salaries of Teachers is more than balanced by a reduction in requirements for Special Services, Administration, and Other Expenditure. It must be

observed, however, that this result is only rendered possible by the regrettable suspension of nearly all new developments.

FOR Higher Education during the year, Local Authorities require £13,378,000 compared with £10,989,000 in 1920-21. As Mr. Fisher pointed out, the increase is accounted for by

Higher Education.

Secondary and Technical education. It is due, he said, to increase in the volume of work, "more schools, more children in the schools, longer school life, and also to the fact that the Salaries of Teachers have increased." The time has probably arrived, as the President suggested, to investigate more closely, than has hitherto been the practice, the quality of the entrants into Secondary Schools. Unless a larger proportion of children admitted "stay the course," and by passing the Secondary Schools Examination prove that they have reached a satisfactory standard of attainment, the increasing expenditure cannot be justified. We agree with Mr. Fisher, however, in thinking, that a closer examination of the claims of children desirous of attending Secondary Schools will not, of necessity, involve decreased cost as the schools can unquestionably be filled by pupils well qualified to profit by the education provided. Mr. Fisher reminded the Committee, in concluding his speech, that it was sometimes said "this Government has done a great deal in the way of subsidizing public education. No Government has done so much or has approached it in liberality, but has it improved public education? Has it affected in any way the content of our education?" There is probably an answer to this criticism, but the one given by the President was not particularly convincing.

THE Superannuation Bill, 1922, was introduced into the House of Commons in pursuance of the recommendation of the Geddes Committee that five per cent of teachers' salaries should be contributed towards the cost of benefits under the 1918 Act as a temporary measure pending a reconsideration of

The 5 per cent Contribution to Pensions.

the whole pensions question. In its original form it had certain somewhat objectionable features: on the facts already supplied in the House 5 per cent certainly seemed too high a contribution even for a brief period defined as "until Parliament otherwise determines"; contributions *without interest* were returnable in the case of teachers who were unable to become eligible under the principal Act; moreover contributions were leviable until a teacher satisfied the Board that they could not become eligible—a provision particularly unfair in the case of secondary school teachers whose eligibility is dependent upon "qualifying" service, as to the nature of which the Board does not, normally, inform them until they are nearing pensionable age and who, therefore, might have to contribute for years without their knowing whether such contributions were justified; and, finally, on the question of compensation for withdrawal from local pension schemes, which contribution would have rendered preferable to National Superannuation, the Board was, virtually, made judge and jury in one. At the moment of writing the second reading of the Bill had been adjourned until a Select Committee of the House has reported on the question whether in fixing the present Scales, any undertaking was

given, or implied, by Government that the provisions of the Act should not be altered while the Scales remain in force—not quite the point at issue during the debate. The fate of the Bill is uncertain; but, if it is passed, it will assuredly need considerable amendment when in committee. One fact has become established beyond all doubt; the Bill meets with the strongest possible opposition from all classes of the teachers affected.

ON May 10th, Mr. Fisher stated that the Government proposed to set up a committee to inquire into the modifications desirable in the system of superannuation established by the Superannuation Act of 1918, with reference to economy, the provision of adequate and suitable benefits to teachers, and the relations such modifications might have upon the Scottish Superannuation

The Superannuation Act and a Departmental Committee.

Act of 1919. Later, it was made clear, during the debate on the Pensions Bill, that the Committee would be a Departmental one. If it is set up, and it is just possible that this may depend upon the fate of the Pensions Bill, there are certain points which should be noted. In the first place, since the Act is highly technical, it is of the utmost importance that it should include among its members actual representatives of the teachers themselves, not merely "persons interested in education." This is necessary because the weak spots in the original Act were, to a considerable extent due to two facts: the whole Act was framed on the principle that the school and not the teacher is the unit to be considered in determining what service is or is not pensionable or qualifying, and this has resulted in hardship and injustice, much of which, again, is apparently consequent upon an imperfect knowledge of the conditions obtaining in secondary education on the part of those charged with its administration. Again, there are many amendments needed, particularly where secondary school teachers are concerned, which ought to be considered at the instance of practical teachers. The question of extending the scope of the Act to teachers not in state-aided schools will also arise. That evidence furnished by representatives of the teachers themselves must be accepted goes without saying.

FOLLOWING out the national decision to economize in education, the Army Council is putting its own house in order, and has recently issued a new scale of fees for cadets admitted to the Army Colleges at Woolwich and Sandhurst. There are seven scales of payment: for the son of a soldier who has died on active service and whose family has been left in pecuniary distress the fee remains at £20 a year; for the son of a deceased officer whose widow is eligible for a pension the fee is £55 (raised from £40); this is also the fee for the son of a soldier who has been discharged for ill health or after twenty years' service; for the son of a Lieut.-Colonel or Colonel or Captain or Commander, R.N., or Wing Commander in R.A.F., £80, but for officers below these ranks, £55; for the son of a Major-General, Rear-Admiral, or Air Vice-Marshal, £95; for the son of a General, Admiral, or Air Chief Marshal, £105; and lastly for the son of a private gentleman, £200. This latter rate cannot be regarded as excessive considering a boy of ten pays the same fee at any preparatory school of standing. And it is

Economy in Army Education.

only fair that officers and soldiers should have an advantage of fees for their children when they have risked their lives in the war in return for meagre pay. Further, it is known that sons of soldiers are usually more imbued with the spirit of the army than those of civilians.

IT not infrequently happens that the Colonies have a valuable lesson to teach the Old Country, just because a younger community approaches its problems unhampered by prepossessions and traditions. We find, for example, in a recent issue of *The School*, the organ of the Ontario College of Education in the University of Toronto, some suggestive remarks on the professional standing of inspectors and administrators. Whether teachers can properly be regarded as a profession in the full sense of the term is held to be doubtful, whilst so many of them receive the teacher's certificate after spending only one year, or at most two years, in a training school. But in the case of inspectors and administrators there is no doubt whatever. An Ontario inspector must be a university graduate with specialists' standing, or, as we should say, a graduate in honours. He must have taken at least a year of professional training, and has probably taken two years. He must have served at least seven years as a teacher. He must have continued his professional studies sufficiently to pass a second and more difficult professional examination. He has probably also taught in a high school or collegiate institute. In short, whether one considers time required in preparation, length of service, or importance and difficulty of work, he can bear comparison with outstanding professional men of any sort. We agree that inspectors and administrators should be members of the teaching profession, and when they have been distinguished members of that profession we do not think much is heard to the effect that their visits to the schools are a nuisance to the teachers.

BUT we have troubles about the inspectorate much nearer home than Ontario. It is obvious that if inspection and administration are to be intelligently and sympathetically conducted, the posts of inspectors and administrators should be good enough to attract some of the most successful men and women in the teaching profession. Such was the case in this country before the School Teachers (Superannuation) Act was passed. By the terms of that Act a teacher who leaves his teaching post for an inspectorship under a local education authority forfeits his pension rights, his service as an inspector counting only as "qualifying" and not as "recognized" service. Scotland, not to speak of several of the Colonies, knows better than thus to discourage the best teachers from undertaking the difficult and responsible duties attaching to the posts in question. We observe that the National Association of Inspectors of Schools and Educational Organizers, recently formed for safeguarding the interests of inspectors and officials employed by local authorities, has entered upon a vigorous campaign for securing the rectification of what is not only a grievance to its members, but also a danger to the schools. We wish the Association every success in the prosecution of its campaign.

WHAT should be the relation of our Universities to the Barbers, that distinguished profession collateral with the Surgeons? This question, apparently frivolous, was solemnly canvassed in a Report considered by Convocation at London University. May it not be that to ensure a clean and easy shave for its citizens would help the world forward as much as the discovery of the origin of Greek civilization? Seriously, we have full sympathy with the ideal of bringing the University into the workshop, and of raising the dignity of the arts and crafts, not, as the Report is careful to explain, by "the creation of a new profession or a new class of *talking* professors—of these among our industries there is already a plethora." The practical proposal, which was accepted by Convocation with little opposition, is for co-operation in this matter between the University and the City and Guilds of London Institute, the London City Livery Companies, and similar organizations. University extension is daily widening its implications. Academic in origin, it now recognizes the social and economic education of the workers as a special obligation. The dismal science will perhaps in future excite less interest, but the worker's joy in his own handicraft will abide for ever. We look forward to the day when the University on the best advice will hand to the workman its diploma recognizing him as a master-craftsman.

AN American writer has been studying comparatively "The World Supply of College Men." It seems that the War had a various and hitherto unrealized effect on attendance at colleges and universities; for whilst the shortage in France for the four years of struggle was 66.4 per cent. and in the British Empire rose at one time to 37.3 per cent., in Germany, provident for peaceful competition after war, the deficiency of men students for the whole period was only 6.7 per cent., whilst the number of women students increased from 4,056 in 1914 to 6,969 in 1918. It is pleasant to learn that there has been a great recovery in the British Empire: against 20,748 students in 1916-17, there were in 1920 no fewer than 73,705, and still the academic population grows. We, for our part, cannot swallow the sugary doctrine that every bricklayer should have a university education. But we rejoice that the old fear of an "intellectual proletariat" has gone. As the business of life becomes more complex and technical, the more does it ask of science, and the more can it absorb of the scientifically trained; indeed, economically, a failure in the supply of highly cultivated intelligence would be as disastrous as a failure of corn crops. Democracy, if it is not to degenerate into misrule, requires nobly educated leaders; and should we grudge the universities to the people, we could not complain if they proved to be incapable in their building or blind in their destroying. Nor are we thinking only of the lower world; it is good that as many as possible should have entrance to those sublime regions the describing of which Sir James Barrie would have to leave to McConnachie. Yet, for all this, we must not forget that it is easy to *ruin a machine by overfeeding it with unfit material*, and we must keep our academies strong and worthy of their good name.

THE Departmental Committee on the "Teaching of English" quotes the following opinion from a memorandum drawn up by the Secondary School Inspectors of the Board of Education: "Methods of teaching English are so far little developed. They have been far less thought out than the methods of teaching subjects." Secondary school masters have long realized the truth of this dictum. A committee, set up by the Incorporated Association of Assistant Masters in Secondary Schools, is engaged in formulating a teaching method for English language and literature which shall, if possible, systematize the various, often desultory, methods of teaching what is, perhaps, the most difficult subject in a school curriculum. As this Committee consists of between seventy and eighty members, practically all specialist teachers, and drawn from every type of secondary school, public, private, endowed, county, and municipal, it should be able to reduce the many, sometimes conflicting, theories which at present obtain to a practical class-room method, inclusive of what is best in these theories as tested by actual experience. Such a method, so generalized as to be capable of application to the varying needs and conditions of all classes of secondary schools, would be of great value to the form masters upon whom so much of the teaching depends, and particularly to younger and less experienced men who are in doubt as to the best ways of turning to account their knowledge and appreciation of their own language and literature.

English
Language and
Literature in
Secondary
Schools.

WITH the immense and increasing expansion of its organization the problems that confront Industry, and that insistently demand solution, grow apace. To quote a remark of Lord Robert Cecil's, one of the facts that must strike any careful observer is that "neither in this or in any other country" is "the industrial machine working smoothly." Undoubtedly something is fundamentally wrong. The conditions that govern the working of the vast industrial machine need humanizing. But this will never be adequately accomplished unless a new spirit can be infused into and pervade its working. A commendable step in this direction has been taken in the inauguration of *The National Movement towards a Christian Order of Industry and Commerce* under the leadership of Lord Hambledon, Messrs. A. Rowntree and B. S. Rowntree, and Mr. S. W. Pascall. A welcome indication of success in this endeavour "to rally men and women of goodwill engaged in the administration of industry and commerce for the application of Christian principles to industrial and commercial life" is given by the inclusion in the list of the promoters of so many men and women *actually engaged in administration*. Such men and women, inspired by Christian ideals and possessing the requisite technical knowledge about the conditions of industry, are the right persons to work out the detailed application of Christian principles in this sphere of life. Bishops and church leaders, with all the goodwill in the world, cannot possess the intimate knowledge which is indispensable. They can, however, render invaluable moral help and encouragement; but only really Christian business men and women can do the actual work. The Movement is still in its infancy. If it expands, as it deserves to do, and

Christian
Principles in
Industry and
Commerce.

becomes a real power in our social and industrial life, it will render the nation and the world invaluable service.

WE think it our duty, and a pleasant duty it is, to extend a welcome to *The Beacon*, a new monthly periodical edited by Mr. E. R. Appleton, and published by Mr. Blackwell, of Oxford. To admit that, figuratively speaking, the civilized world is at present plunged into something like Stygian darkness is not necessarily to write oneself down a hopeless pessimist. The admission may rather be a call to show a light in the darkness, and, if possible, to reveal the causes and the dangers of that darkness. Pre-eminent among them, says *The Beacon*, are (1) wrong conceptions and methods of education, (2) the loss of all but materialistic ideals, and (3) the loss of the sense of beauty, and the warped Art which follows from that loss. Education, religion, and art—these, then, are the three essential and inseparable things which have to be dealt with broadly and constructively. We must revive and proclaim the doctrine that education is much more than preparation for material success. We must be guided by the principle that God is to be sought and honoured in every pursuit, not merely in something technically called religion. And we must understand that the artist's vision is the perception of the truth underlying the beautiful—that true art, so far from being confined to esoteric coteries, must, like true religion, be sought and honoured in every pursuit. Surely there never was a time when it was more necessary to make a stand for these great human ideals, and we wish the promoters of *The Beacon* all success in the work to which they have set their hands.

A New Effort
to Lighten
Our Darkness.

AS the result of the recent municipal elections, the fate of the London continuation schools is more uncertain than ever. The party victorious at the polls are generally committed to "economy," and, having regard to election pledges, the new higher education sub-committee felt that, obviously in spite of their conscientious convictions as to the value of the schools, it was the Council's duty to the electorate "to take action with a view to a modification of the existing state of affairs." The sub-committee openly expressed their regret at the prospect of arresting a work which "through the energy and enthusiasm of the teachers has already proved likely to be of inestimable service to the community." They had had the advantage of hearing the views of ten influential deputations, one of which represented the bishops whose dioceses include parts of the administrative county of London, and the bishops had, we are glad to be able to state, put in a powerful plea for the schools. Still, the sub-committee are of opinion that the results of the election point to the unpopularity of the schools, an unpopularity which is partly attributed to the decision of the Government not to put into general operation the continuation schools clauses of the Act of 1918. For the present the Council has been recommended to ask Mr. Fisher to receive a deputation with a view to getting the Council released from its statutory obligations in the matter until the Act is generally applied. This delay will at any rate give time for further consideration.

The London
Continuation
Schools.

It has long been known that Paris was to demolish her fortifications which date from 1840 and are 22 miles in circumference. Part of the land thus reclaimed is to be devoted to the "Cité Universitaire"—a series of hostels for the reception of university students and of playing fields for both sexes.

Paris as a
University
Centre.

In the old days a student could find bed and board in the Latin Quarter at a very reasonable figure; but since the war *la crise des loyers* and the increase in the number of students—now estimated at over twenty thousand—has made even the sixth floor garret of Murger far too dear for the modest purse of the native or foreign student. So it is proposed to return to the system of the Middle Ages when every "nation" had its residential hall and the students lived in common. M. Deutsch de la Meurthe, whose name is familiar as the patron of early aviation, has given ten million francs to buy the land for playing fields and erect buildings for French students. Neighbouring land will be available for the halls of other nations, and Canada has already secured an acre of the seventy-two available. When the British Maecenas has been found whose name will go rolling down the ages as the benefactor of the British students, many more of these will be attracted to spend a year or more in Paris and acquire an international education. Then the pestilential heresy that the Parisian student does nothing but sit outside cafés all day and toy with Amoryllis in the evening will be extirpated. It would do many of our best university students a great deal of good to see how the French students work for ten (not six) months of the year. It is unfortunate that the somewhat dissimilar difficulties of the University of London site cannot be solved in the same way.

THE MYSTERY OF THE UNCONSCIOUS.

BY GUY KENDALL.

It is stated that on the music hall stage at the present time, there is one allusion which never fails to "get across." The performer clenches his fists and his teeth, and in an agony of determination mutters the formula, "Day by day, in all respects, I grow better and better." It is interesting to note that the attitude assumed is the very reverse of that which Monsieur Coué and the Nancy school of "auto-suggestion" recommend. For their central doctrine is that all effort of will must be eliminated if the power of suggestion is to operate. Imagination is the faculty to be employed, and if imagination is in conflict with will, the result will be the exact reverse of what is desired. But at least the popularity of this burlesque is sufficient testimony to the wide-spread vogue of the Nancy school.

The cures which Monsieur Coué and his followers claim to have effected, or rather to facilitate, are interesting enough. But still more remarkable is the theory that lies behind them. Monsieur Coué himself gives a succinct little account of it in his pamphlet "Self-Mastery," and it has been more fully worked out by Monsieur Baudouin in his book, "Suggestion and Auto-Suggestion," which is being widely read. As in most psychological works of the present time, the explanation is sought for in the unconscious (Monsieur Baudouin prefers the term subconscious, which had earlier currency). If we are ailing, so this astonishing theory runs, we have only to fix our minds on the thought of the cure as achieved. The Unconscious will not only carry out the means to the end, but will incidentally diagnose the trouble. Our conscious selves need not even know what organ is not functioning rightly. The Unconscious will find it out and will set it right.

There are undoubtedly weak places in the theory that the Nancy school have constructed. Their analysis of the nature of will and imagination seems faulty and incomplete. They do not, for example, appear to recognize that all will has an element of imagination in it. But, granted that the reference to the Unconscious as the operative factor is correct (and this point admits of little doubt), we are faced with the question, more insistently than ever, "What is the Unconscious?" Is it God or the Devil? Is it self or other than self?

As described to us by Freud it would seem to be decidedly diabolical. As described by Coué and Baudouin it is mainly a beneficent being, though it sounds like a piece of folk-lore or a tribal myth. It would seem to be something like the genie of the Arabian Nights, to which instructions need but to be given in accordance with the right formula, and the desired result, however impossible of achievement it might seem, will duly follow. Indeed it is not impossible that the conception of the genie itself may have sprung from the observations about these operations of the mind made by the subtle wisdom of the East. The Romans, too, spoke of a man's genius, which seems something between his soul and his "double." Horace has described it: "The genius, mate who rules our natal star, god of human nature, perishing with each individual, fickle of favour, cheerful or frowning." The Germans again have their "Doppel-ganger," and the Hebrews have passed on to Christianity their conception of the guardian-angel, which may itself originally have come from Persia.

But is the "unconscious self" anything more than a name invented to denote an inexplicable series of phenomena? Just as the late Lord Salisbury once said of the ether that it served as no more than a noun to the verb "to vibrate," so it might almost be said that the "unconscious self" is simply the impersonation of all those phenomena of mind which do not appear in consciousness.

For the chief puzzle is this: Is the unconscious really myself or another? The puzzle appears in the most crudely contradictory form at the very outset of Monsieur Coué's account of it. He says, "There exist in us two individuals absolutely distinct from one another." Then, after illustrating the idea of the Unconscious from the facts of somnambulism, he says of the sleep-walker who awakes and beholds his handiwork, "He himself has done it (c'est lui qui l'a fait) though he is quite unaware of it." Two individuals and one self! It almost reminds one of the conundrums of ecclesiastical Christology.

Yet it is possible that the idea is not so far removed, after all, from some quite common notions of ours. When, for instance, we speak of "the soul," we are not usually thinking merely of our surface-selves, and that which commonly appears in our everyday consciousness. We regard it as a deeper element in our being. The poets may possibly help us here. Matthew Arnold likened the soul to the inner citadel of Troy, where was kept that image on which the safety of the city depended.

So in its lovely moonlight lives the soul.
Mountains surround it, and sweet virgin air;
Cold plashing, past it, crystal waters roll;
We visit it by moments, ah, too rare.

We are becoming familiarized, again, with the hypothesis, as yet unproved, of telepathy, the conveyance of thought directly from one mind to another, without the medium of sense-perception. Now it is at least possible that the unconscious self is less individualized than the ordinary personality of you and me. That is to say that, just as two water-lily blossoms, which may be mistakenly supposed to belong to different plants, really spring from a single invisible root in the mud at the bottom of a pond, so the deepest stratum of self in us may be a common root from which the consciousness of many individuals is derived, only the union is so deep that it affects their separate existence but little and rarely. This is fanciful conjecture, but it seems certain at least that the unconscious self

has greater and acuter powers of perception than the conscious. This might even account for the strange results of "book-tests," *i.e.* when a person writes down whole passages from a book which he has never read and no one has ever described to him, if indeed there are any genuine cases of such tests, from which all possibility of memory has been eliminated.

But to come nearer home to our ordinary actions and motives. We all know that we pay conscious attention only to a small fraction of our habitual daily actions. As William James has remarked, if we thought about the way to do up each button that we fasten, we should take all day dressing. If we think too much of the movement of our feet when running down stairs, the result is that we proceed not better but worse, and stumble not a little. Now nature and the course of evolution have so arranged things that a vast number of our bodily movements and processes are beyond our direct control. We can move an arm or a leg by immediate volition, but the operations of the digestion we can only indirectly reach through what we may determine to eat and not to eat. But it is possible that these processes are not altogether automatic, but can at least come within the direct control of our unconscious selves. It is the same as with our dressing and our walking; only, whereas these processes can come under our direct and conscious control at will, the others cannot. Accordingly the Nancy school hold that we can affect the operations of our least accessible organs by giving instructions to our unconscious selves. What the life of the unconscious self really is we cannot say. It must remain a mystery just as far as the life of plants is a mystery. For these appear to be sensitive, and in some cases seem as though they were possessed of will, and yet we believe them to be unconscious. And, just as we speak of the plant as "it," so we shall probably continue to speak of the unconscious self, so far as it remains unconscious.

Nor can we hope at present to understand the means whereby the unconscious works its miracles. Miracles they are in more than one sense. They are effects of mind on matter and are processes of which we can only describe the beginning and the end, in which respect they would seem to satisfy at least Bishop Gore's definition of miracle as laid down in his latest book, as well as that of Saint Augustine before him. But it explains much more than miracle. It tells why repetitions are so frequent in religious liturgies. They are not all "vain repetitions," for, to be of effect, our formulæ of auto-suggestion must be both articulated aloud and repeated frequently, if not rapidly. They sink better into the unconscious mind that way.

It explains too, why knowledge that is "got up" for examinations, or unwillingly and under compulsion, vanishes so quickly. The will and the imagination do not work together in harmony during the process of "cram." Certain "facts" have been memorized superficially and mechanically, but they have not seized hold of the imagination and sunk into the unconscious. It explains why so much of our energy is mis-spent energy, racking us to pieces like an engine that has lost its regulator. For it is too often the exercise of will-power in opposition to imagination. Where your treasure is, there will your heart be also. And where your heart is there only can your will be effective.

MR. R. A. H. MACFARLAND, M.A., Head Master of Campbell College, Belfast, died at the College on Tuesday, April 11, after a brief illness. Mr. MacFarland, who was a native of Omagh, co. Tyrone, was educated at the Royal Academical Institution, Belfast, Queen's College (now University), Belfast, and Gonville and Caius College, Cambridge (Foundation Scholar). An elder brother, Sir John Henry MacFarland, M.A., LL.D., is Chancellor of the University of Melbourne, and another brother was the late Rev. George MacFarland, who was for a long period secretary to the Board of Missions of the General Assembly of the Presbyterian Church in Ireland.

MODERN DEVELOPMENTS IN THE TEACHING OF MATHEMATICS.

By G. GOODWILL.

IN considering the present state and tendencies of mathematical teaching, it is well to begin by giving some attention to that past, of which this present state is the outcome. On doing so, it probably comes as a surprise to very many to find that mathematics only began to be generally included in the curriculum of our schools, towards the middle of the nineteenth century. Before that time arithmetic was taught in some schools, usually by the writing master, mainly to meet the requirements of those connected with commerce, and this origin will explain why so many of our older text-books devote themselves to questions of buying and selling. The work in this subject was mainly empirical, consisting chiefly in a collection of miscellaneous rules.

On the other hand, algebra and geometry found their way into the schools from the universities, and this accounts for the much more academic character of the teaching of these subjects; indeed, geometry in the form of Euclid's Elements, consisted at least as much in exercise in formal logic, as in instruction in the subject matter of geometry. As regards arithmetic, it had at least the advantage of very fairly meeting the limited requirements for which it was intended, but as a means of developing the intelligence of the pupil, it left much to be desired. Geometry and algebra could lay very little claim to practical value, on account of the limited range of these subjects that was covered, and the abstract manner in which the matter was treated.

In geometry, few pupils got beyond the first book of Euclid, which represents an extremely narrow range of geometrical knowledge, and, still worse, the logical aim, which was regarded as its principal justification, was hardly at all realized. This was fully recognized by some of our leading mathematical teachers, who in 1871 combined to form the Association for the Improvement of Geometrical Teaching, which Association, renamed the Mathematical Association, has now extended its activities to the improvement of mathematical teaching generally.

The fact is that logic makes very little appeal to the average youth. If a proposition itself has some intrinsic interest, and its truth is not obvious, it may hold his attention, but if the truth is obvious at the outset, he is unable to see the use of proving it—an appreciation for the relatedness of facts and for their analysis into the smallest number of elements, however desirable, has to be cultivated, its effective existence cannot be taken for granted, and to depend on its exercise by our pupils is to foredoom our teaching to failure.

What seemed to present itself as the antidote for this logical abstraction was practical geometry, and to this many teachers hopefully turned, but to most the results have been disappointing. School geometry by one swing of the pendulum was carried to the opposite extreme, with all the defects that were so well recognized in the early teaching of arithmetic. And these defects are very real, for it was felt that the appeal to the pupils' reason was now insufficient, and that so-called proofs by measurement or by experiment, being not really proofs at all, often tended rather to weaken the confidence of a pupil in the truth of a proposition than to bring conviction to his mind; and indeed on practical grounds the subject seemed far from satisfying.

It is clear that the true path lies between the two extreme ones. That wherever the relatedness of facts is not too remote, the pupils should be induced to recognize and if possible to discover it, especially in the case of those facts which may have some intrinsic interest for them. The results of these principles, when put into practice, are first, that such propositions as Euclid I 4 and I 13

are at the outset now assumed without proof, and second, that while the relations between the individual proposition within certain groups are considered—for example those dealing with the areas of rectilinear figures, the chord and angle properties of circles, and the properties of similar figures, and such a sequence is followed in each group as will make these relations clear—the groups themselves do not follow any rigid logical sequence. They may be considered more or less concurrently, so that for instance, there is no need to postpone the simple and attractive principle that shape depends on angle and proportionality of lengths, to the late stage which Euclid's sequence requires.

The superficial thinker imagines that there is some logical unsoundness in this procedure. It is time that it was realized that to broaden the bases of hypotheses does not introduce unsoundness into any argument, and that to reduce this basis to the narrowest possible limits is a task that cannot profitably be undertaken by any ordinary schoolboy.

On the practical side geometry is linked through mensuration with arithmetic, which thereby gains probably its most valuable field of operations for the pupil. And again through scale drawing the way is led to trigonometry and mechanics. It is, of course, unlikely that there is one path that is suited to all types of schools and to the particular talents of all teachers, but it is believed that the sort of course which is most generally desirable is becoming more obvious, and that more precision as to what kind and degree of abstractness is to be avoided, and how more concreteness may be introduced with real advantage, is gradually being attained.

However, in the case of geometry, there must be great intrinsic difficulty in finding a satisfactory presentment, for since the time when Euclid was first printed in Venice, in 1482, there have been, in other countries as well as in this, repeated revolts against its abstractness as unsuitable for youths, but in no case has a substitute been found which has met with any very wide acceptance. The tendency of the present moment is probably in the direction of a reversion to a more logical method of treatment, i.e. rather towards the style of Euclid's rigidity than away from it.

The general tendency to a wider outlook and an increased freedom in the method of treatment which has been referred to in the case of geometry, shows itself similarly throughout the whole range of mathematical teaching. The fact is that each branch of mathematics throws light on all the others, so that the tendency of our best teachers is to bring them into close relation, while at the same time making clear, as far as possible, the unity of purpose of each, so as to give it coherence. Consider, for instance, the case of simple proportion. This was formerly treated, and unfortunately is still treated to a large extent, as a distinct subject in arithmetic, algebra, and geometry. Consequently the notion of expressing this relation by means of a formula or a graph, or that of a constant of proportionality, was often not acquired, since many boys did not reach it in algebra; neither in arithmetic was it in any way brought into relation with shape, i.e. similarity, in geometry. Also a notation for proportion was used in arithmetic which is hardly to be found elsewhere throughout the whole range of mathematics and its applications in science, where the idea is almost universally present in some form or other. Again, the use of logarithms was postponed until after the whole theory of indices and logarithms to any base had been attempted—it cannot be said that they were mastered—in algebra.

Now logs to base ten are often with great advantage studied as much in connexion with arithmetic as with algebra, and a very sound, though of course by no means complete insight into their nature is arrived at at an early stage, without introducing the shadow of any misconception, but on the other hand providing a natural introduction to the understanding at a later stage of their very widest meaning. In this connexion, however, it should be

remarked that in some cases the very ease with which logs may be used has led to their abuse, so that some pupils are to be found who have quite lost the power to use ordinary arithmetic in cases where the use of logs is quite absurd.

Perhaps the most striking development that is at present in progress is the use of graphs in the teaching of mathematics. That the true meaning of this development is at present not by any means perfectly understood, was brought home to the present writer by a remark recently made in public by a mathematical teacher of some standing, to the effect that the work in graphs was merely a pottering with co-ordinate geometry. It is surely true on the contrary that in co-ordinate geometry the normal outlook is the exact opposite of what it is in graphic mathematics. In the former the aim in general is to investigate the properties of curves algebraically, while in the latter the aim is to represent mathematical relations of any sort by means of curves. Of course, the two must overlap, but the distinction in aim is fundamental and characterizes the work accordingly.

The real value of graphs is their aid in conveying a clear notion of functionality. It is a pity that there is not some less mysterious sounding word to express a notion which in its essence is familiar. From the very outset our pupils should begin to realize that in mathematics we attempt to bring different quantities into relation. It is only when we are concerned with relations between two dependent quantities that the ordinary graph can be used, but these are of frequent occurrence, and here the graph comes in with very telling effect.

The case of simple direct proportion is the simplest of all, but the association with it of the curve representing inverse proportion is as interesting as it is expressive. In the opinion of the present writer, graphs are to be employed whenever they can be of value in exhibiting—one might almost say depicting—the nature of a particular relation, or for getting suggestions for new relations. In general, they should not replace purely algebraic work, but should be used to illuminate it. Graphs should not be presented as providing a method of real practical use for the solution of simple, simple simultaneous, or quadratic equations, but if used to exhibit linear and quadratic relations they of course shed a flood of light on the nature of these equations and their solutions.

So long as quantities are unrelated there is chaos—when we perceive relations between them we are able to reduce them to order. An ordinary boy is quite able to appreciate this principle at its real value when he writes down the relation, say, between the area, base, and height of a triangle in the formula $A = \frac{1}{2} b h$, and the value of this formulation is obvious when, in a hundred instances of the sort, he is able to see that in general, having expressed the relation, he can find any one of the quantities involved, if he knows the others. It is unfortunate that in some aspects the formula has brought itself into disrepute. This would never happen if it were habitually used to express recognized relations. Moreover, the fact that historically the setting down of a formula has very frequently come as a signal of victory at the end of a strenuous intellectual conflict—carried on by the most powerful minds with the perplexities of nature—is a thought which may well strike the imagination of a boy, and induce him to give to mathematical formulae the respect which is their due.

This same basic notion of relatedness or functionality will give a boy a clear notion of the meaning and use of trigonometry, which he can well appreciate at the moment when he is introduced to the subject. Thus, while previously he has become acquainted with the linking together of lengths, areas, and volumes he cannot but see that it is an advantage to be able to link up angle with these, and that this is done for him by trigonometry.

Formerly trigonometry as a school subject was treated in such an abstract way, that it was only after a long time that a boy got to see what it was all about. Nowadays

numerical trigonometry has been developed as almost a distinct subject, introductory to the general subject.

After what has been said, the part which the calculus plays in school mathematics should be very clear, for it arises naturally out of that notion of functionality which should have been cultivated from the very first, and which we must be able to rely on if the introduction of the subject is to be anything but useless. Thus with the circumference and the area of a circle, each being dependent in a known way on the radius, the question naturally arises how is the value of each affected by the growth of the radius? The very difficulty encountered in answering this question satisfactorily, in the case of the majority of boys, arouses the interest and whets the appetite for more insight. Also, while it can be seen that in cases when we know the nature of a function we can infer its change-rate, so also it will be seen that if from the nature of circumstances we may happen to know the change-rate of a function, by an inverse process we may be able to infer the nature of the function itself. Thus the demand for the integral calculus arises naturally, and it takes a natural place in the development of a boy's mathematical knowledge. Such broad ideas, combined with a non-rigid method of treatment, are what characterize the best mathematical teaching of the day. But it must not be inferred that such enlightened work can enable the learner to dispense with drill in acquiring the technique of the subject. A considerable amount of this is absolutely essential, as it is in the case of any subject which is really worth acquiring.

It need hardly be repeated here that there is no royal road to a knowledge of mathematics, but to the normal boy it need be no road through a dry and arid desert, but rather a progress through regions which, while they demand continued industry and determination on the part of the traveller, arouse his interest and excite his curiosity at every stage.

HIGHER EDUCATION IN EGYPT*.

OF the debt that we owe to Egypt for its old-time service to civilization and to art too small a part has been discharged. It is in respect of higher education that the arrears are greatest. True that seven Higher Government Colleges, those of Medicine, Law, Engineering, Agriculture, Veterinary Science, Commerce, and the Sultania Training College, promote their several branches of knowledge. But they are so far insufficient for those who would resort to them that eight hundred Egyptian students are driven annually to seek instruction abroad. If a Université Egyptienne was founded in 1908, it has suffered for want of funds, nor has it either fit buildings or a permanent staff of professors. If the ancient University of El Azhar is frequented by twelve thousand students, its teaching is chiefly theological and literary. If the American Mission has raised money for the creating of a University at Cairo, the project has not yet got beyond the stage of inception. To defend the existing Higher Colleges from competition, and to assert itself in its own house, the Egyptian Government resolved to establish a State University, and the Final Report of the Commission appointed in 1917 to elaborate a scheme for such an institution is now made public.

The Commission recommends that as soon as possible a national University should be established with seven Faculties, *viz.* Arts, Science, Medicine (including Dental Studies), Law, Engineering and Architecture, Agriculture, (including Veterinary Science), Commerce and Economics, and that special Departments of Education, Oriental Studies, and Archaeology should be included in the Faculty

of Arts. The Higher Colleges, not controlled as now by different Ministries, should be incorporated as Faculties of the University. The new Faculties of Arts and Science should provide *liberal* training and offer a two years' course covering what of arts and science is required as preliminary to the specialized studies of the other Faculties. But a university is not a mere cluster of Faculties, a congeries of Schools; it must be a unifying and organized whole. It is intended that the projected academy should be not only a teaching university, but also, as far as possible, residential, and that it should "create traditions now lacking, and foster a corporate spirit among students of all classes." Again, unity is to be secured by the system of administration. "The University," says the Report, "should be a self-governing corporation, with a separate division assigned to it in the State Budget." Its head, if the plan be realized, is to be a Chancellor, and its administrative powers are to be vested in a Court, a Senate, and the Faculties, the sphere in which each authority has competence being carefully defined.

We observe with satisfaction that the Report contemplates an improvement in the training of teachers. Generally approved will be the judgment that "in an Egyptian university the medium of instruction should be the language of the country," and that Egyptian teachers of proved ability should be enabled as soon as possible to qualify themselves as lecturers in the University. Some hostile criticism may be called forth by the connexion adumbrated between the University and the State. In the United Kingdom the universities have always been independent of governmental control. The scheme of the Egyptian commissioners lays down that the Chancellor of the University is to be the Minister of Education *ex officio*; a President to whom he may delegate his duties is to be appointed by the Council of Ministers on the nomination of the Chancellor after consultation with the Court; and the Court itself is to contain a representative of the Ministry. But a large measure of academic freedom would be left to the Faculties, which, severally or in conference, would determine the courses of study and the conditions on which degrees are conferred; and the impartial method suggested for the selection of professors resembles that pursued by the University of London. Of the Report in general we may say that it is a conscientious and penetrative document. We venture to urge that it should be discussed by Egypt in the sober and placable tone that pervades it. National oppositions are wont to be injurious to education. For intellectual Egypt the fairest hope lies in harmonious development through that fusion of cultures symbolized of old by those who set up statues of the Greek gods in the temple of Isis.

PERSONAL PARAGRAPHS.

THE Rev. Charles Coverdale Tancock, whose death was recently reported, was formerly Head Master of Rossall and afterwards of Tonbridge School. Dr. Tancock went from Sherborne School with a scholarship to Exeter College, Oxford. He obtained a first class in Classical Moderations and in Lit.Hum., and on leaving Oxford became an assistant master at Charterhouse. He was ordained in 1880, and six years later was appointed Head Master of Rossall. He remained there for ten years, and then, having held the living of Leck, Kirkby Lonsdale, for a short time, he accepted the head mastership of Tonbridge School, in succession to Dr. Joseph Wood, who had gone to Harrow. Dr. Tancock resigned in 1907, and went to Casterton Parva, in Rutland, as rector. There he did good work on the Rutland Education Committee, as trustee of Oakham School and as Warden of the Peterborough Diocesan Lay Readers' Association. Dr. Tancock had a

MESSRS. LONGMANS' HISTORICAL LIST.

History of the British Empire.

By C. S. S. HIGHAM, M.A. With 15 Maps. Crown 8vo. 5s.

Longmans' Historical Series for Schools.

By T. F. TOUT, M.A. In Three Books. Crown 8vo.

Book I.—A First Book of British History, from the Earliest Times to 1919.

With 89 Illustrations, 13 Genealogical Tables, and 26 Maps and Plans. 3s. 6d.

Book II.—A History of Great Britain, from the Earliest Times to 1918.

With 36 Maps and Plans, 8 Genealogical Tables, and 147 Portraits and other Illustrations. 5s. 6d.

Book II is also issued in Two Parts:—

Part I.—From the Earliest Times to 1485. 3s. 6d. Part II.—From 1485 to 1918. 3s. 6d.

Book III.—An Advanced History of Great Britain, from the Earliest Times to 1918.

With 29 Genealogical Tables and 63 Maps and Plans. 10s. 6d.

Book III is also issued in Three Parts:—

Part I.—From the Earliest Times to 1485. 4s. Part II.—From 1485 to 1714. 4s. Part III.—From 1714 to 1918. 4s.

A Student's History of England, from the Earliest Times to the Conclusion of the Great War.

By SAMUEL RAWSON GARDINER, D.C.L., LL.D. With 378 Illustrations. Crown 8vo. 21s.

Or in Three Volumes as follows:—

Vol. I.—B.C. 55 to A.D. 1509. With 173 Illustrations. Crown 8vo. 7s. 6d.

Vol. II.—1509 to 1689. With 96 Illustrations. Crown 8vo. 6s. 6d.

Vol. III.—1689 to 1919. With 116 Illustrations. Crown 8vo. 6s. 6d.

A School Atlas of English History:

A Companion Atlas to Gardiner's "Student's History of England."

Edited by SAMUEL RAWSON GARDINER, D.C.L., LL.D. With 66 Maps and 22 Plans of Battles, &c. Fcap. 4to. 6s. 6d.

Outline of English History. B.C. 55—A.D. 1919.

By S. R. GARDINER, LL.D. With 71 Illustrations and 17 Maps. Crown 8vo. 4s. 6d.

Or in Two Parts:—

First Period, B.C. 55 to A.D. 1603. 2s. Second Period, 1603 to 1919. 3s.

A Short History of England, from the Earliest Times to the Peace of Versailles, 1919.

By CYRIL RANSOME, M.A. With Tables, Plans, Maps, Index, &c. Crown 8vo. 5s.

Or in Two Parts, 3s. each:—

Part I.—To THE DEATH OF ELIZABETH, A.D. 1603. Part II.—From 1603 to 1919.

A Class-Book History of England.

By the REV. DAVID MORRIS, B.A.

New Edition, brought down to the end of the Great War.

With 4 Historical Maps, 20 Plans of Battles, and 30 other Illustrations. Fcap. 8vo. 5s. 6d.

A History of Europe.

By A. J. GRANT, M.A.

New Edition, revised in 1920, bringing the narrative down to the End of the Great War. With 13 Coloured Maps, and 13 Uncoloured Maps and Plans in the Text. Complete in One Volume. Crown 8vo. 15s. NET.

Also issued in Three Parts:—

Part I.—The Classical World. 4s. NET.

Part II.—The Middle Ages. 6s. NET.

Part III.—Modern Europe. 6s. NET.

Outlines of European History.

By A. J. GRANT, M.A.

New Edition, issued in 1919, bringing the narrative down to the End of the Great War.

With 95 Illustrations and 22 Maps and Plans. Complete in One Volume. Crown 8vo. 6s.

Also issued in Two Sections:—

SECTION I, containing Part I, THE CLASSICAL WORLD, and Part II, THE MIDDLE AGES. 3s. 6d.

SECTION II, containing Part III, THE MODERN WORLD. 3s. 6d.

Stories from European History.

By LUCY DALE With 8 Maps, 4 Coloured Plates, and 31 other Illustrations. Crown 8vo. 2s. 6d.

A First History of France.

By Mrs. MANDELL CREIGHTON. With 33 Illustrations and 5 Coloured Maps. Crown 8vo. 5s.

A History of Greece from the Earliest Times to the Death of Alexander the Great.

By SIR C. W. C. OMAN, M.A., F.S.A. With 13 Maps and Plans, and 84 Illustrations. Crown 8vo. 7s. 6d.

LONGMANS' CLASS-BOOKS OF ENGLISH LITERATURE

PROSE WRITERS.

RECENT VOLUMES.

HEROES OF INDIAN HISTORY. By J. C. ALLEN. With 8 Maps and 37 Illustrations.	1s. 6d.
TALES FROM SHAKESPEARE. By CHARLES and MARY LAMB. (Abridged.) With 28 Illustrations. Introduction and Notes by D. SALMON.	2s. 3d.
CAPTAIN COOK'S VOYAGES. (Abridged.) With Frontispiece, Introduction, and Notes by J. C. ALLEN.	1s. 9d.
THE CLOISTER AND THE HEARTH. By CHARLES READE. (Abridged.) With Frontispiece, Introduction, and Notes by J. C. ALLEN.	2s. 0d.
THE LIFE OF NELSON. By ROBERT SOUTHEY. (Abridged.) With 12 Maps and Illustrations, also Introduction and Notes by J. C. ALLEN.	1s. 9d.
THE HOUSE OF THE WOLF. By STANLEY WEYMAN. (Abridged.) With Introduction and Notes.	1s. 9d.
WESTWARD HO! By CHARLES KINGSLEY. (Abridged.) With Frontispiece, Introduction, and Notes by J. C. ALLEN.	1s. 9d.
A BOOK OF SELECTIONS FROM THE WRITINGS OF R. L. STEVENSON. With Introduction and Notes by S. G. DUNN, M.A. (Oxon)	2 0
ENGLISH LETTERS SELECTED FOR READING IN SCHOOLS. By H. J. ANDERSON, M.A. A Collection of 76 Letters by 43 representative Authors.	2 3
ALICE IN WONDERLAND. By LEWIS CARROLL	1 6
MICAH CLARKE: A Tale of Monmouth's Rebellion. By Sir A. CONAN DOYLE. (Abridged edition.) With 20 Illustrations	2 6
THE WHITE COMPANY. By Sir A. CONAN DOYLE. (Abridged edition.) With 12 Illustrations	2 0
THE REFUGEES: A Tale of Two Continents. By Sir A. CONAN DOYLE. (Abridged.) With Introduction and Notes by G. A. TWENTYMAN, B.A., and 15 Illustrations	2 6
ERIC BRIGHTYES. By Sir RIDER HAGGARD, K.B.E. (Abridged) With Introduction and Notes by J. MALINS, M.A., and with 31 Illustrations and Initials	2 0
LYSBETH: A Tale of the Dutch. By Sir RIDER HAGGARD, K.B.E. (Abridged.) With Introduction and Notes by J. B. D. GODFREY, M.A., and 11 Illustrations	3 0
HERWARD THE WAKE. "Last of the English." By CHARLES KINGSLEY. (Abridged.) With Introduction and Notes by W. H. BARBER, B.A.	2 0
THE HEROES: or, Greek Fairy Tales for My Children. By CHARLES KINGSLEY. With Introduction and Notes by WALTER R. PRIDEAUX, M.A., 6 Illustrations and 2 Maps	1 6
SETTLERS IN CANADA. By Captain MARRYAT. (Abridged.) With Introduction and Notes by G. M. HANDLEY, B.A.	2 0
LITERARY SELECTIONS FROM CARDINAL NEWMAN. With Introduction and Notes by A. SISTER OF NOTRE DAME	2 3
THE KING OF THE GOLDEN RIVER. By JOHN RUSKIN	1 0
TOM BROWN'S SCHOOL DAYS. By T. HUGHES. (Abridged.) With Frontispiece and Introduction and Notes by A. J. ARNOLD B.A.	1 9
SELECTIONS FROM THACKERAY. With Introduction and Notes by JOHN THORNTON, M.A.	1 6
LITTLE WOMEN. By L. M. ALCOTT. With Introduction and Notes by JEAN MCWILLIAM, The Belvedere School, Liverpool	1 6
TALES OF THE GREEK SEAS. By ANDREW LANG. With 7 Illustrations by H. J. FORD	1 9
TALES OF TROY. By ANDREW LANG. With 7 Illustrations by H. J. FORD, and a Map	1 9
FROUDE'S SHORT STUDIES ON GREAT SUBJECTS. s. d. Selections, with Introduction and Notes by J. THORNTON, M.A. With 7 Illustrations	1 6
SELECTIONS FROM THE WRITINGS OF RICHARD JEFFERIES. With Introduction and Notes by F. TICKNER, D.Lit., M.A., B.Sc.	1 6
TALES OF KING ARTHUR AND THE ROUND TABLE. Adapted, with Introduction and Notes, by J. C. ALLEN, from the "Book of Romance," edited by ANDREW LANG. With 20 Illustrations by H. J. FORD	1 6
THE STORY OF THE GLITTERING PLAIN. By WILLIAM MORRIS With Introduction, Life, and Notes	2 6
THE TALISMAN. By Sir WALTER SCOTT. (Abridged.) With Biography by ANDREW LANG; Introduction and Notes by J. THORNTON, M.A.	2 0
A WONDER BOOK. By NATHANIEL HAWTHORNE. With Introduction and Notes by ADA PERRY	1 9
THE CORAL ISLAND. By R. M. BALLANTYNE. (Abridged.) With Frontispiece, Introduction, and Notes by A. S. TETLEY, M.A.	2 0
IVANHOE. By Sir WALTER SCOTT. (Abridged.) With Biography by ANDREW LANG; Introduction and Notes by T. H. ALLEN	1 9
A LEGEND OF MONTROSE. By Sir WALTER SCOTT. (Abridged.) With Biography by ANDREW LANG Introduction and Notes by R. LISHMAN, B.A.	2 3
QUENTIN DURWARD. By Sir WALTER SCOTT. With Biography by ANDREW LANG; Introduction and Notes by JOHN THORNTON, M.A.	1 9
A CHRISTMAS CAROL. By CHARLES DICKENS. With Introduction and Notes by E. GORDON BROWNE, M.A.	1 6
SELECTIONS FROM DICKENS. With Notes by L. B. TILLARD, B.A., and 4 Illustrations	2 0
ROBINSON CRUSOE. By DANIEL DEFOE. (Abridged.) With Introduction and Notes by T. W. SILVERDALE, and Illustrations by LANCELOT SPEED and H. J. FORD	1 6
GODS AND HEROES OF THE NORTH. By ALICE ZIMMERN, Girton College, Cambridge. With Notes and 12 Illustrations	1 6
MACAULAY'S HISTORY OF ENGLAND. Selections. With Introduction and Notes by J. W. BARTRAM, M.A.	1 6
MACAULAY'S HISTORY OF ENGLAND. Chapter I. With Biography and Notes by D. SALMON	1 9
MACAULAY'S HISTORY OF ENGLAND. Chapter III. With Biography and Notes by D. SALMON	1 9
TANGLEWOOD TALES. By NATHANIEL HAWTHORNE. With Introduction and Notes by GUY KENDALL, M.A.	2 0

POETRY.

RECENT VOLUME.

SOHRAB AND RUSTUM, AND BALDER DEAD. By MATTHEW ARNOLD. With Frontispiece, Introduction, and Notes.	1s. 9d.
A CHILD'S GARDEN OF VERSES. By ROBERT LOUIS STEVENSON. With an Introduction by GUY KENDALL, M.A., and a Portrait	1 6
A SELECTION OF POETRY FOR SCHOOLS. Edited by JOHN THORNTON, M.A.	2 0
THE STORY OF SIGURD THE VOLSUNG. Written in Verse by WILLIAM MORRIS. With portions condensed into Prose by WINIFRED TURNER, B.A., and HELEN SCOTT, B.A. With Introduction and Glossary	2 3
THE MAN BORN TO BE KING. From "The Earthly Paradise." By WILLIAM MORRIS. With Introduction, Life, and Notes by J. W. MACKAIL, F.B.A., M.A.	1 6
ATALANTA'S RACE AND THE PROUD KING. From "The Earthly Paradise." By WILLIAM MORRIS. With Introduction and Notes	1 9
MACAULAY'S LAYS OF ANCIENT ROME: with Ivy and the Armada. With Biography by D. SALMON. Introduction and Notes by J. W. BARTRAM, M.A.	1 6
THE LADY OF THE LAKE. By Sir WALTER SCOTT. With Biography by ANDREW LANG, Introduction and Notes by W. HORTON SPRAGGE, M.A.	2 0
THE LAY OF THE LAST MINSTREL. By Sir WALTER SCOTT. With Biography by ANDREW LANG, Introduction and Notes by F. TICKNER D.Lit., M.A., B.Sc.	2 0
MARMION. By Sir WALTER SCOTT. With Biography by ANDREW LANG, Introduction and Notes by GUY KENDALL, M.A.	1 9
MILTON'S PARADISE LOST. Each with Biography of John Milton by D. SALMON, Argument and Notes by W. ELLIOTT, M.A. Book I, 10d.; Books II, III, IV, V	0 9
MILTON'S COMUS, IL PENSEROSO, L'ALLEGRO, AND LYCIDAS. With Biography of Milton by D. SALMON, Introduction and Notes by W. ELLIOTT, M.A.	1 0

A Complete List of Messrs. Longmans' Books for Elementary Schools will be sent post free on application.

LONGMANS, GREEN & CO., 39 PATERNOSTER ROW, LONDON, E.C. 4.

MESSRS. LONGMANS & CO'S LIST.

LONGMANS' LATIN COURSE.

With copious Exercises and Vocabularies. Crown 8vo. 8s.

Part I.—Up to and including the Regular Verb, Active and Passive. 2s. 6d.

Key for the use of Teachers only, 3s. 10d. post free.

Part II.—Including Pronouns, Numeral Adjectives, Irregular Verbs, Accusative and Infinitive, Ablative Absolute, Dependent Questions, Dependent Clauses, the Use of the Cases and Oratio Obliqua. 3s. 6d.

Key for the use of Teachers only, 5s. 4d. post free.

Parts I and II.—Complete in One Volume. 5s.

Key for the use of Teachers only, 7s. 10d. post free.

Part III.—**Elementary Latin Prose**, with Complete Syntax and Passages for learning by heart.

By W. HORTON SPRAGGE, M.A., Assistant Master at the City of London School. 4s. 6d.

Key for the use of Teachers only, 3s. 10d. post free.

*.*The Pronunciation adopted in Longmans' Latin Course is in accordance with the Regulations issued by the Board of Education with a view to securing uniformity.

ELEMENTARY UNSEENS.

With Notes and Vocabularies. Crown 8vo. 2s.

Key for the use of Teachers only, 4s. 10d. post free.

LONGMANS' ILLUSTRATED FIRST LATIN READING BOOK AND GRAMMAR.

By H. R. HEATLEY, M.A. With 67 Illustrations by LANCELOT SPEED. Crown 8vo. 2s.

A JUNIOR LATIN READER.

Compiled by P. M. DRUCE, M.A., and M. D. MANDUELL, M.A.

With 38 Maps and Illustrations. Crown 8vo. 3s. 6d.

A SENIOR LATIN READER.

Compiled by J. LANG, B.A. With 82 Illustrations, Maps, and Plans. Crown 8vo. 4s.

ARNOLD'S PRACTICAL INTRODUCTION TO LATIN PROSE COMPOSITION.

By G. G. BRADLEY, D.D. Crown 8vo. 7s.

A Key for the use of Teachers only, 5s. 4d. post free.

GRADATIM: An Easy Latin Translation Book for Beginners. With Vocabulary.

By H. R. HEATLEY, M.A., and H. N. KINGDON, M.A. Fcap. 8vo. 2s.

A Key for the use of Teachers only, 5s. 4d. post free.

INTRODUCTION TO GREEK PROSE COMPOSITION.

By ARTHUR SIDGWICK, M.A. With Exercises. Crown 8vo. 7s. 6d.

A Key for the use of Teachers only, 6s. 4d. post free.

LONGMANS' MODERN FRENCH COURSE.

By T. H. BERTENSHAW, B.A. Containing Reading Lessons, Grammar, Passages for Repetition, Exercises, and Vocabularies. With Illustrations by D. M. PAYNE and from Photographs.

Part I.—Pupils' Edition, 2s. 6d. Teachers' Edition, 3s.

Part II.—Pupils' Edition, 3s. Teachers' Edition, 3s. 6d.

Part III.—Pupils' Edition, 3s. 6d. Teachers' Edition, 4s. 6d.

The Teachers' Edition contains all the matter in the Pupils' Edition, together with additional Notes on Reading Lessons, Grammar and Passages for Repetition, Translation of Exercises, &c.

THE PHONETICS OF FRENCH PRONUNCIATION.

Being Longmans' Modern French Course, Part I, Lessons 1-10, in the transcript of the Association Phonétique.

By Miss I. M. G. AHERN, B.A. Lond. Crown 8vo. 1s. 3d. net.

MON PETIT LIVRE FRANÇAIS.

By CLARA S. DOLTON, B.A. With Illustrations by DOROTHY M. PAYNE. Crown 8vo. 2s.

May be used independently or as an introductory book to Longmans' Modern French Course.

A POCKET DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES.

By LEON CONTANSEAU. New Edition, thoroughly revised by his Son, LUDOVIC CONTANSEAU.

Demy 16mo. 3s. 6d. net.

LONGMANS' FRENCH TEXTS.

Edited, with Notes, Exercises, and Vocabularies, by T. H. BERTENSHAW, B.A.

(a) **Pupils' Edition**, with Notes, Exercises, and Vocabularies.

(b) **Teachers' Edition**, consisting of the matter of the Pupils' Edition, together with Translation of Exercises and Additional Notes.

ELEMENTARY SERIES. 10d. each; Teachers' Edition, 1s. 6d. each.

Le Premier Coucou de la Forêt-Noire (L. VUICHOD).

L'Aventure de Jacques Gérard (M. STEPHANE).

MESSRS. LONGMANS & CO'S LIST.

Modern Inorganic Chemistry.

By J. W. MELLOR, D.Sc. With 334 Illustrations. 8vo. 12s. 6d.

The book has been written from the modern standpoint, and, in consequence, the more recently established principles of physical chemistry have been woven with the facts generally taught in chemistry classes in Universities, Technical Institutes, and other Schools.

Introduction to Modern Inorganic Chemistry.

By J. W. MELLOR, D.Sc. With 232 Illustrations. Crown 8vo. 9s.

This book can be regarded as an abridgment of the author's "Modern Inorganic Chemistry," in a simpler dress, and it has been adapted to suit beginners in chemistry.

A Text-Book of Inorganic Chemistry.

By G. S. NEWTH, F.I.C., F.C.S. With 155 Illustrations. Crown 8vo. 9s.

Manual of Chemical Analysis, Qualitative and Quantitative.

By G. S. NEWTH, F.I.C., F.C.S. With 102 Illustrations. Crown 8vo. 9s.

Qualitative Chemical Analysis, Organic and Inorganic.

By F. MOLLWO PERKIN, C.B.E., D.Sc., Ph.D. With 16 Illustrations and Spectrum Plate. 8vo. 9s.

Intermediate Physics.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. With Diagrams. 8vo. 15s. net.

A Text-Book of Physics : Including a Collection of Examples and Questions.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S.

SEVENTH EDITION. Revised by HERBERT MOSS, M.Sc. (Lond.), A.R.C.S., D.I.C. With Diagrams. 8vo. 21s.

A Text-Book of Practical Physics.

A Book of Reference for the Student working in a Physical Laboratory.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. With 278 Illustrations. Crown 8vo. 10s. 6d.

Hygiene.

By J. LANE NOTTER, M.A., M.D., and R. H. FIRTH.

NINTH EDITION. With Illustrations. Crown 8vo. 10s. 6d.

Magnetism and Electricity. A Manual for Students in Advanced Classes.

By E. E. BROOKS, B.Sc., A.M.I.E.E., and A. W. POYSER, M.A.

With 413 Illustrations. Crown 8vo. 12s. 6d. net.

Electricity and Magnetism. For Advanced Students.

By SYDNEY G. STARLING, B.Sc., A.R.C.Sc. With Diagrams. Crown 8vo. 12s. 6d. net.

A Treatise on Light.

By R. A. HOUSTOUN, M.A., Ph.D., D.Sc. With 328 Diagrams. 12s. 6d. net.

A Course in Practical Mathematics.

By F. M. SAXELBY, M.Sc., B.A.

With 200 Figures, Examination Questions, and Answers to the Examples. 8vo. 12s.

An Introduction to Practical Mathematics.

By F. M. SAXELBY, M.Sc., B.A. Crown 8vo. 4s.

A School Flora for the use of Elementary Botanical Classes.

LONGMANS, GREEN & CO., 39 PATERNOSTER ROW, LONDON, E.C. 4.

considerable reputation as a preacher, both at Rossall and at Tonbridge, and while he was in the diocese of Rochester Bishop Harmer made him an honorary canon of the Cathedral.

PROF. K. VICKERS, at present Professor of History at Newcastle, has been appointed Principal of Southampton University College in succession to Mr. T. Loveday, who has been appointed Vice-Chancellor of Bristol University. Prof. Vickers is a scholar of Exeter College, and has been Professor of History at Newcastle for the last nine years. He has been very successful in the organization of history teaching throughout the north-east district, and in the administration work of the college.

THE announcement of the appointment of Sir Thomas H. Holland to succeed Sir Alfred Keogh as Rector of the Imperial College of Science at the close of the Summer term will be received with interest, particularly by the old students of the Royal College of Science, of which Sir Thomas is a distinguished *alumnus*. He is a geologist, with a remarkable record of service as Director of the Indian Geological Survey, Professor of Geology, and Commanding Officer of the O.T.C. at Manchester, President of the Indian Industrial Commission, and President of the Board of Munitions in India during the war. In 1910 Sir Thomas was president of the Old Students' Association of the College, and later a member of the governing body, representing the Indian Empire.

PROF. T. POWELL, Emeritus Professor of Celtic at Cardiff University College, has passed away at the age of 77. He was educated at Jesus College, Oxford, and was appointed to the Chair of Celtic at Cardiff in 1884, having previously held the post of second master at the Independent College, Taunton. He edited Thomas Stephen's "Gododin," and was a regular contributor to many Welsh periodicals.

PROF. JOHN EDGAR, the second occupant of the Bell Chair of Education in the University of St. Andrews, died suddenly on the last day of the proceedings at St. Andrews. Prof. Edgar, who is widely known through his "History of Early Scottish Education," dealing with Scottish education up to the Reformation, was appointed to the chair twenty years ago, and though not playing any great public part has done much in a quiet way to help forward the development of educational science in Scotland. His teaching experience began at Dumfries Academy, and later he became classical master at the Royal High School, Edinburgh, and Secretary to the Secondary Schoolmasters in Scotland. He succeeded the late Prof. Meiklejohn at St. Andrews in 1902.

MR. MAURICE LEONARD JACKS, the newly-appointed Head Master of Mill Hill School, will probably be the youngest "Head" in the country. He is 28, as compared with the 30 years of age at which the late Sir John McClure was appointed. Mr. Jacks was born in 1894, was educated at Bradfield College and Balliol College, Oxford, and gained a first in Classical Moderations in 1914. He took a commission in the King's Royal Rifles on the outbreak of war, served in France from July, 1915, to November, 1916, when he was wounded in the battle of the Ancre. Subsequently he served as instructor in an Officers' Cadet Battalion until the end of the war. Returning to Oxford, he became Fellow, Tutor, and Dean of Wadham College. He is a member of the Student Christian Movement, has been president of the Balliol Boys' Club, is a guardian of the poor for the city of Oxford, vice-chairman of the Oxford Juvenile Organization Committee, and he has thrown himself heart and soul into social work, particularly among boys.

ONLOOKER.

CORRESPONDENCE.

MR. FISHER AND SPELLING.

To the Editors of The Journal of Education and School World.

SIRS,—Mr. Fisher has come to the defense of boys and their spelling. Replying to those who said boys on leaving school were unable to spell, he asked in the House; 'Why, Mr. Speaker, when did they know how to spell?' Perhaps irate merchants will fill in the date.

Worse than this, Mr. Fisher spoke contemptuously of the orthographic idol. He declared he '*attacht the smallest possible value to the virtue of orthography!*' Just think of the compilers of Spelling books and dictionaries, of the hours, days, and years spent by teachers and scholars in teaching and learning spelling, to say nothing of the slaps hands inflicted, the tears shed, the endless repetition in riting so-cald misspelt words during and after school hours, of the failures at examinations and consequent loss of situations, and the hindrances to acquiring other knowledge, all for what? That which Mr. Fisher attacht the smallest possible value. As it was asked of old, again be it demanded: 'Why all this waste?'

Can Mr. Fisher leave the question as it is? Should not educationists and true economists demand that which Dr. Howells 'lookt upon as the greatest monument of human folly,' shall be reformed, in the interests of the young, education, literature, and the English language?

Rydal Mount, Hetton-le-Hole.

H. DRUMMOND.

THE MODERN TEACHING OF GEOMETRY.

To the Editors of The Journal of Education and School World.

DEAR SIR,—I hope the letter of Mr. W. E. Paterson in your March issue will not be ignored. The suggestion that a Committee representative of teachers and examiners be invited to draw up a sequence, is most opportune. We welcomed the liberty given us twenty years ago, when Euclid's sequence was dropped, and as long as writers of Geometry books adhered to certain unwritten rules, the number of possible sequences was not great. Certain recent text-books have offended against the unwritten law that Premises should not be redundant. It is well known that there are several theoretically possible logical approaches to the usual theorems about parallels, there is a group of theorems such that if any one is assumed as an axiom, all the rest can be proved; certain text-books have assumed two of these possible axioms. The result of such a process can only be chaos and anarchy, if two such axioms may be assumed, why not three? Why not any number? It is obvious that by assuming sufficient axioms we could get any order we like. By all means let us endeavour to stop the rot at once.—Yours, &c.,

E. W. P. TEMPERLEY.

THE TEACHING OF DYNAMICS.

To the Editors of The Journal of Education and School World.

SIRS,—May I again trespass on your valuable space to reply to the comments of your contributor upon my letter in the April number of this journal?

I would remind him that the subject for discussion was the formal treatment of Dynamics, which boys are expected to study at some part of their school career; many of the points he raises have no bearing on this. The knowledge of mechanics obtained at school is supposed to be sufficiently sound and complete to be useful in the further study of Physics and of Engineering.

Your correspondent complains that there is a desire to teach every branch of Science as if it were a book of Euclid; which means, I presume, to make clear the meaning and significance of terms and statements as they arise. That is the aim in the exposition of any subject, because the treatment is thereby rendered as intelligible as possible; there is no advantage usually in preserving a confused statement, when a clearer one can be given.

Newton's laws of motion were undoubtedly intended to be a system of clear and precise statements, just as those of a book of Euclid. The fact that they are not free from ambiguity is a mere accident; other fields of research made insistent demands

McDougall's

Books are increasingly appealing to Teachers in Secondary Schools, because of their sound and accurate Scholarship—excellent get-up—and extreme reasonableness in price. Some Recent Issues are:

PROBLEMS AND QUESTIONS IN PRACTICAL MATHEMATICS.

By JOHN TURNER, F.R.H.S. In this splendid collection there are 360 Questions, over 200 Diagrams. It will be found of the greatest service for boys in the third to the fifth forms. Limp Cloth, 1s. 6d. With Answers, 1s. 9d.

MUSICAL EXERCISES IN STAFF NOTATION.

Music as the B. of E. recommend it be taught. In Three Books Carefully Graduated. Over 300 different Exercises. Each, Paper, 4d. Cloth, 6½d.

TWO NOTATION SINGING EXERCISES. Staff through Sol-fa.

Book 1. For Pupils from 7 to 9. Cloth, 10d.
Book 2. For Pupils from 9 to 12. Cloth, 1s.
Book 3. For Pupils from 12 to 15. Cloth, 1s.
Complete in one volume, 204 pages, 2s. 6d. net.

SONGS FROM FAR AND NEAR.

By JANET HAIG, L.L.A. 78 Songs, Rounds, Catches, &c. In Staff or Sol-fa Notations. Each, Paper, 9d. Cloth, 1s. Piano Edition, 8s. net. By post, 8s. 6d.

SONGS OLD AND NEW.

By E. MASON, Mus.Doc. 80 Songs of all types, given in Staff or Sol-fa Notations. Each, Paper, 8d. Cloth, 10½d. Piano Edition, 7s. net. By post, 7s. 6d.

ENGLISH SONGSTER.

By E. MASON, Mus.Doc. The very best of the English Folk Songs, &c. In Staff or Sol-fa Notations. Paper, 8d. Cloth, 10½d. Piano Edition, 7s. net. By post, 7s. 6d.

THE DUAL CONTOUR ATLAS.

Is the Atlas you should order if you wish the very best at a reasonable price. Political Maps face corresponding Contour Maps. 60 Maps and Insets of large size. Up to date in every detail, beautifully produced, and bound in Stiff Boards. Price, with Index, 1s. 9d. net. Cloth Boards with Index, 3s. net.

REGIONAL GEOGRAPHY

OF THE WORLD—Revised to 1922.

A Modern Scientific Treatment. Contains an abundance of Contour Maps in Colour and Black and White, with many Diagrams, also a Section of Questions based on the text. 240 pages. Cloth covers, 2s. 6d. net.

AN INTRODUCTION TO LITERATURE.

Gateways to Bookland provide an excellent medium to introduce pupils of from 9 to 14 to the work of many of the masters of our English tongue. Produced in accordance with the recommendations of the British Association re School Books and Eye-sight. Reproductions in Colour of many famous Pictures. Details on application.

UNIVERSITY OF LONDON PRESS

MODERN DEVELOPMENTS IN EDUCATIONAL PRACTICE.

By **JOHN ADAMS, M.A., B.Sc., LL.D.**, Sometime Professor of Education in the University of London.
The purpose of the book is to provide a survey of the many recent changes that have taken place in educational practice, and to account as far as possible for their origin in terms of the psychology of to-day. The newer plans are described, explained, and criticized, particularly in their relations to the conditions of schools as they are and as they are likely to be in the immediate future. Teachers will thus be placed in a position to make an intelligent choice among the various schemes that are at present claiming their attention.

Ready in June. 6s. net.

THE EDUCATIONAL THEORY OF PLUTARCH.

By **K. M. WESTAWAY, D.Litt.**, Staff Lecturer in Classics, Royal Holloway College, late Marion Kennedy Student, Newnham College.
In analysing Plutarch's educational theory and its underlying philosophy, the author of this book deals with an age during which Greek thought, even apart from Christianity, contained much of value, though it is overlooked by the general historian. Demy 8vo. 7s. 6d. net.

GEOGRAPHY AND WORLD POWER.

By **JAMES FAIRGRIEVE, M.A., F.R.G.S.**, Lecturer at the London Day Training College.
The Times critic says: "It is a valuable review, treating in a broad, philosophic way the influence of physical facts upon history."
With over 80 Original Sketch Maps and Diagrams. New Edition, thoroughly revised, with additional Chapters and Maps. 5s. net.

THE NEW REGIONAL GEOGRAPHIES.

For Secondary and High Schools.
By **LEONARD BROOKS, M.A., F.R.G.S.**, formerly Geography Master at the William Ellis School.
Edited by **JAMES FAIRGRIEVE, M.A., F.R.G.S.**
I. **The Americas.** 4s.
II. **Asia and Australasia.** 4s.
III. **Africa and Europe.** 6s. 6d.
PART 1. **Africa.** With Maps and Plans. 2s. 6d.
PART 2. **The British Isles.** 2s. 6d.
PART 3. **Europe, including the British Isles.** With 55 Maps and Plans. 5s.
PART 4. **Europe, excluding British Isles.** 3s. 6d.
IV. **The World.** 7s. 6d.

A SHORT HISTORY OF MODERN ENGLAND.

From Tudor Times to the Present Day (1485-1914).
By **FREDERICK BRADSHAW, M.A. (Oxon.), D.Sc. (Lond.).**
"A well-written history, concise but not dull, and the result of a good deal of experience in the needs of students and examiners."—*The Times*.
With 8 Full-page Maps. New Edition, 5s.

AN ECONOMIC GEOGRAPHY OF THE BRITISH EMPIRE.

By **C. B. THURSTON, B.Sc.**, Geography Master at Kilburn Grammar School.
A complete survey of the geography and economic resources of the British Empire, especially suitable for students of commerce.
With many specially prepared Maps and Tables. New Ed., 5s.

*MATRICULATION ENGLISH COURSE.

By **B. J. SPARKS, B.A., B.Sc.**, Senior English Master, Portsmouth Secondary School. 4s.
This book covers efficiently the whole of the ground in English Grammar and Composition for the London University matriculation and examinations of similar standards.
"We like the planning of this book very much, and we like it especially for the practical way in which the author has carried out his excellent ideal."—*School World*.

PSYCHANALYSIS IN THE CLASS-ROOM.

By **GEORGE H. GREEN, B.Sc., B.Litt.**, Diploma in Education (University of Oxford), &c.
The author's theory is based upon the practical investigation of a great number of cases similar to those which so often puzzle the teacher. He is primarily concerned with the wholesome development of normal pupils, rather than with the treatment of pathological cases.
Professor W. McDougall, F.R.S., in his preface to the American Edition says: "Mr. Green has written a book which will reward with new insight every school teacher who may read it."
"A sincere and valuable contribution to the body of educational psychology."—*The Times*.
"We unreservedly recommend it to all interested in education."—*Teachers' World*.
7s. 6d. net.

THE EDUCATION OF BEHAVIOUR.

By **IDA B. SAXBY, D.Sc.**
This is a book on psychology written for teachers and those training as teachers. The special merit of the book is the skill with which it applies recent psychological advance to the needs of the Educator. The author is Senior Assistant in the Women's Education Department of University College, Cardiff.
With Illustrations. 6s. net.

THE JUNIOR REGIONAL GEOGRAPHIES.

By **WILLIAM H. BARKER, B.Sc.**, and **LEONARD BROOKS, M.A., F.R.G.S.**
The aim of the Junior Regional Geographies is to form a preparatory course for more advanced Regional Studies, and the books will be found to meet the needs of the Elementary Schools and Lower Forms of Secondary Schools.
Book I. The Peoples of the World. Ready June, 1922.
Book II. The British Isles. Ready July, 1922.
Book III. The Regions of the World. Ready September, 1922,
and will contain new maps and new illustrations in line and half-tone.

A SCHOOL GEOMETRY.

By **B. A. HOWARD, M.A.**, and **T. A. BINGHAM, B.Sc.**
Forms a complete course in theoretical and practical geometry for Secondary Schools.
404 pages, complete, 5s. 6d.; separately, Parts 1 and 2, 3s. 3d. each.
"Should quickly become one of the most popular of modern Geometry Books."—*Schoolmaster*.

A SHORT HISTORY OF MODERN EUROPE.

From the French Revolution to the Great War.
By **EUGENE L. HASLUCK, B.A.**
This volume sets forth in clear and interesting fashion the developments in European Politics which led to the outbreak of the Great War in 1914.
"A useful and clearly written introduction to the study of recent European history not by any means overburdened by facts."—*The Times*.
With many New Maps. New Edition. 4s.

*THE RAINFALL OF THE BRITISH ISLES.

By **M. DE CARLE SALTER**, Superintendent of the British Rainfall Organization.
With 126 illustrations. 8s. 6d. net.
This book traces the development of rainfall observing in the British Isles, and sets forth with a wealth of illustration the principal facts which have emerged from a close study of this fascinating subject. It will become the *vade mecum* to all observers, and a book of reference to teachers and students of all economic questions connected with water.

COLLECTED SETS OF MATRICULATION EXAMINATION PAPERS.

English Papers, Sept., 1915—Sept., 1921. 2s. 2d.
Arithmetic and Algebra, Geometry, Mechanics, and Mathematics (more advanced), Sept., 1915—Jan., 1921. With answers. 2s. 9d.
History and Geography, Sept., 1918—Jan., 1922. 1s. 6d.
French and Latin, Sept., 1919—Jan., 1922. 1s. 6d.
Science Papers, Botany, Chemistry, Heat, Light, and Sound, Electricity and Magnetising, Sept., 1919—Jan., 1922. 1s. 6d. In preparation.

From HODDER & STOUGHTON'S EDUCATIONAL LIST

GROUP TESTS OF INTELLIGENCE.

By **PHILIP BOSWOOD BALLARD, M.A., D.Litt.**
Author of "Mental Tests" and "Teaching the Mother Tongue."

This book contains a lucid account of recent developments in the theory and practice of such mental test as can be applied by the ordinary teacher in the ordinary classroom. Dr. Ballard has not only described and criticized the numerous group tests in use in America, but has also given four complete sets of group tests of his own which will enable a teacher to measure the intelligence of all the pupils in his class in about an hour and a half. These tests are simple to give and simple to mark.

Nearly ready. **6s. net.**

By THE SAME AUTHOR.

MENTAL TESTS.

The aim of this book is to make the teacher his own critic, and it incorporates Mr. Cyril Burt's revision of Binet's Tests. "So essentially modern and rational that it should find a place in the library of every teacher."—*Scottish Educational Journal*.

Crown 8vo. Third Impression. **6s. net.**

TEACHING THE MOTHER TONGUE.

By **PHILIP BOSWOOD BALLARD, M.A., D.Litt.**
Author of "Mental Tests," &c.

The teacher will find in these pages thought that is shrewd and stimulating, and advice that is wise and kindly.

Crown 8vo. **4s. 6d. net.**

THE NEW TEACHING.

Edited by **JOHN ADAMS, M.A., B.Sc., LL.D.,**
Professor of Education in the University of London.

Chapters are specially contributed by leading teachers dealing with the different subjects of the curriculum and the application of modern methods to their treatment.

"This volume may be called without exaggeration a work of national importance. It should be an inspiration to teachers and a revelation to the public."—*Observer*.

Demy 8vo. Fourth Impression. **12s. 6d. net.**

A FOUNDATION COURSE IN CHEMISTRY.

By **J. W. DODGSON, B.Sc., and J. A. MURRAY, B.Sc.** **6s. 6d. net.**

A sound scientific course of School Chemistry. The knowledge of the common things of life is formulated, extended, and systematised.

"The treatment is simple and straightforward."—*Science Progress*.

THE ANCIENT WORLD.

By **ALBERT MALET.** Translated from the French.

The History of Egypt, Assyria, Persia, Greece, and Rome, specially edited for the Middle Forms of Secondary Schools.

"Challenges comparison with Mr. Wells's 'Outline' and comes out of the ordeal wonderfully well."—*Scottish Educational Journal*.

With about 100 Illustrations and Maps. **5s. net.**

By **SHEILA RADICE,** Author of "The New Children." With an Introduction by **Dr. PERCY NUNN.**

Crown 4to in Two-coloured Cover.

Very young children are often much interested in geometrical shapes, and if these are presented to them in a simple form, will spend a great deal of time in combining and arranging them, on the principle of a jig-saw puzzle.

It has occurred to Mrs. Radice to harness this faculty of children, from four or five up to almost any age, to the learning of elementary mathematics and geometrical design. These books contain a series of foundations for design which can be completed and developed by any child with water-colours or chalk.

ROMANCE OF BRITISH INDUSTRY SERIES.

Each volume provides a self-contained course of co-ordinated History, Literature, and Geography, viewed from the standpoint of one of our dominant industries or activities, and written for the boy or girl of any age from 12 to 16. Each of these "readers" is a book with a new idea. The pupil is shown the true place of industry in the history of mankind; he learns how to trace the influences which have been exercised by geographical factors; he learns something of the extent to which industry has found expression in art and literature; he is encouraged to illustrate his own reading by drawing maps, plans, sketches, and by written exercises.

HODDER & STOUGHTON, LIMITED, St. Paul's House, Warwick Square, E.C. 4.

upon his genius and time, and prevented a more minute examination of these elementary matters. Speculation as to what he himself thought of the adequacy of these laws does not help matters very much, but your correspondent must know the oft-quoted speech in which he disclaims finality in regard to his work. The laws were indeed sufficient for him, but that is no reason why their admitted faults should be retained. Newton's great powers are not granted to every one.

When the principles of the subject are stated in an orderly manner, there is not an excess of reasoning required, as the writer of the report fears, but less than usual, and no sophistry. The experimental work in illustration also is more simple. In short, experience shows that it is possible to get on with the subject more quickly, and this was my reason for proposing the topic for discussion at the Science Masters' Meeting.

Referring to those parts of your reporter's letter which make suggestions of pedagogic crudity, I will first dismiss his statement that I laid stress on philosophical matters with the remark that I did not use any words which could possibly bear such a construction. Also, I did not propose that the whole sequence of ideas in Dynamics should be given too early to young pupils; nor did I make the absurd contention that students, whether young or old, ought not to use results if they are unable to understand how these results have been obtained.

A more or less thorough treatment of the laws of motion is actually attempted at some time in most schools, and a knowledge of these laws is required in the ordinary examinations. The point at issue is that, if these matters are really to be studied, the ideas should be presented in the clearest manner. When the terms and statements are not clear, the result is a mere accumulation of jargon. It is not desirable to preserve the statement of principles in the form of a "complicated puzzle" for the amusement of adults; nor is it necessary to do so.—Yours faithfully,
T. J. GARDNER.

CONFERENCE OF INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN.

To the Editors of *The Journal of Education and School World*.

SIRS,—Many of your readers may like to know in good time that the Second Conference of the International Federation of University Women will be held in Paris this summer, from July 15 to 18, for although the number of voting delegates is strictly limited, most of the meetings will be for the discussion of subjects of general interest to all university women interested in educational and international ideals, and will not be confined to delegates.

The Federation has made rapid progress since two years ago the university women of Great Britain and the United States invited those of other nations to co-operate with them in working for the promotion of international friendship and understanding. There is now so much evidence of the practical usefulness of an organization which makes it easy for its members to enter into the intellectual life of other nations, to meet in the countries they visit the people whose interests are nearest to their own, that the founders can see already the ample justification of their faith.

Most of the Conference meetings will be held in the fine old house in the Rue de Chevreuse which Mrs. Whitelaw Reid's generosity has enabled the university women of America to open as a centre of international hospitality. Here representatives of the university women of at least twenty nations will meet to consider such topics as the promotion of interchange between students and teachers of the universities and between teachers in secondary schools, the establishment of travelling fellowships, the possibilities of diplomacy as a career for educated women, the position of married women in the professions, and the value of education in the promotion of international understanding.

Prof. Caroline Spurgeon, of the University of London, will preside over the meetings as President of the International Federation. Those of your readers who would like tickets of admission to any of the meetings should apply to the headquarters office, 92 Victoria Street, S.W. 1.

I am, Sirs, yours faithfully,
THEODORA BOSANQUET, *Secretary*.

BURNS, OATES & WASHBOURNE, LIMITED.

A New History of Great Britain for the use of Catholic Scholars.

By E. M. WILMOT-BUXTON, F.R.Hist.S. With a Preface by the Rev. C. C. MARTINDALE, S.J. 5s.
"Up-to-date . . . concise, simple, well arranged."—*Montreal Witness*.
"Should prove a popular text-book in Catholic schools . . . likely to appeal to a much wider circle than that of her co-religionists."—*Saturday Review*.
"As interesting and suitable for the general reader as for the young student."—*Catholic Women's League Magazine*.

A Scheme of Religious Instruction.

Approved for Optional use in the Diocese of Birmingham. 1s.
"This is the well-known Sower scheme, which has been much praised by competent authorities in England and U.S.A. Its purpose is to make room for the application of the best developments of teaching-method to Religion."

Faith and Duty.

By JUDITH F. SMITH. 7s. 6d. A book for teachers on Herbart's lines.
"A really sensible attempt . . . thoroughly up-to-date."—*Sower*.

A Little Reader.

For Catholic children. By Miss A. PRITCHARD. 8d. Practical and interesting. Gives the child something to do.

BLACKIE'S SELECT LIST

In these days of economy experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

BLACKIE'S LONGER FRENCH TEXTS.

From modern French Literature. A series of continuous Readings from Modern French Authors. Printed in large type, with brief Notes, Questionnaire, Phrase-list, and Vocabulary. Each volume contains about sixty pages and is furnished with a vocabulary and other teaching aids. The texts chosen are either complete short books or are skilfully abridged from longer works. 1s. each.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap 8vo. 6d. each.

Characteristic selections from well-known French writers, of sufficient length to be interesting in themselves, as well as representative, as far as possible, of the work of the several authors. Each book consists of from 40 to 64 pages, including a biographical and critical note, text, and explanatory notes. Certain volumes are issued with vocabulary, and a number are provided with questionnaire. Price, with a few exceptions, 6d. each; with Vocabulary, 9d. each.

The most successful French Course of recent years. A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

By E. J. A. GROVES, Lic.-ès-L., Senior French Master, Bradford Grammar School.

PUBLISHED IN TWO VOLUMES.
First Year, 3s.
Second Year, 4s.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction and Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. 3d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater Plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known "Junior School Shakespeare," which omits everything that might be thought undesirable in class reading. Price 6d. each.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.,

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and aesthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

THE WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. 6d. each.

THE STUDY OF ENGLISH. A NEW SERIES.

A BOOK OF ENGLISH PROSE. By S. E. WINBOLT, M.A. 2s. 6d.

ENGLISH PROSE AND VERSE. An Anthology. Arranged and annotated by R. F. PATTERSON, M.A., formerly Foundation Scholar, St. John's College, Cambridge; Charles Oldham Shakespeare Scholar. 2s. 6d.

A SURVEY OF ENGLISH GRAMMAR.

By S. E. WINBOLT, M.A., Christ's Hospital. 2s.

A COURSE OF ENGLISH COMPOSITION By S. E. WINBOLT, M.A. 2s. 6d.

THE GROUNDWORK OF BRITISH HISTORY.

New Edition, brought down to 1921.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super crown 8vo, 8s. net. Complete in One Volume.

In Two parts, 5s. each net. Part I, B.C. 55-1603; Part II, 1603-1921.

In Three Sections, 3s. 9d. each net: Section I, B.C. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1921.

N.B.—FOR THE CONVENIENCE OF THOSE USING EARLIER EDITIONS OF THE "GROUNDWORK," A SUPPLEMENT HAS JUST BEEN ISSUED BRINGING THE BOOK DOWN TO DATE, PRICE 1s. 6d. NET.

THE GROUNDWORK OF THE WAR.

By C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College. 1s. 6d. net.

Prepared specially for a concluding section of "The Groundwork of British History." It brings that work down to 1921.

BLACKIE'S ENGLISH TEXTS. Edited by W. H. D. ROUSE, Litt.D., Head Master of the Perse Grammar School, Cambridge. 1s. each.

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

VI.

ENGLISH.

By G. E. S. COXHEAD.

TO guide English boys and girls towards the sea of life through the channel of the English tongue and the English literature is a noble endeavour, how noble let those say who have mastered every detail of the Report on *The Teaching of English in England*. Fortunately experience has shown that importance of aim is not incompatible with lightness of treatment. When Defoe was accused of permitting, in his *Review*, "trivial matter" (inquiry into the characteristics of the age!) to rub shoulders with great public questions he replied that many "care but for a little reading at a time," and "thus we wheedle them in, if it be allowed that expression, to the knowledge of the world, who, rather than take more pains, would be content with their ignorance and search into nothing." That remains to-day the justification of the supplementary aids to the teaching of English. The task is far greater than his, the introduction into the whole of life. Pedantically treated the result is hatred of English Literature. Why not remember then that Steele and Addison, who worked out Defoe's vein, have lived and triumphed? It was said of them: "Since their days the moral terrorizing of Cromwell's partisans, and the cynical libertinage of Charles II's court, have become equally impossible." Is it beyond our dreams that it shall be said of us: "Since their days the stilted deadening of the love of literature with its reactionary cultivation of the vulgar and the vain have become equally impossible?"

*Alexandre Beljame—*Le Public et les Hommes de Lettres en Angleterre*, 1660-1744.

What one teacher regards as supplementary another may of course regard as normal. There need be no quiver of the heart—or the pen—over that. It is not so much a difference of opinion as of opportunity. If time and circumstance enable some individuals to employ in their ordinary course what is here dealt with as supplementary let them rejoice: there is no eliminating fortune from the affairs of life. What is essential is that in handling such varied work the treatment too must be full of variety: that established, we may label it as we please. Most of us, I imagine, will regard as supplementary the aids discussed here.

Talking precedes writing, reading precedes appreciation: that gives an order for our "aids." Recitation and school libraries, with which are associated Home Reading and Reading Circles, lead the way. These are doubtless in general use in every school, but a word on their more ancillary services may be helpful. With young children—to 11, say—recitation is a great favourite. They love it. Their love will not be lessened by an occasional Recitation Competition, conducted in some such way as this. The class are given to learn a short poem, more rarely a passage of prose—a fable, an incident, a description. Sometimes the same poem is selected for all, sometimes they are allowed freedom of choice. They are informed that they will recite it on subsequent days in batches of about six; that the rest will criticize these efforts in any way they wish, *magistra adjuvante*, and will decide, by vote, on the best; that finally the victors will recite another poem, and by the same process the laurel wreath will be awarded. Properly handled, pronunciation, enunciation, intonation, vocabulary, gesture, bearing, all the salient marks of oral-expression improve discernibly from competition to competition and even from batch to batch, while the joy of it all has to be seen to be believed. And if the passages chosen are of the right sort a beginning has been made of that "body of standard literature" so rightly advocated by the inspectors of the Board of Education.

In the Middle School (11 to 15) recitation is fully as important as among juniors, in some respects more important. Unhappily, it is often less frequently practised. Yet at the point where the multiplying of subjects and the greater demand on the reflective powers are bound to militate unfavourably against that happy, home-like spirit that is the breath of Junior School teaching, any device that helps the informal atmosphere to persist should be especially welcome. To prevent the deadening effect so generally noticed at this stage few aids are more helpful than recitation, especially when tinged with the competitive element. With those who have been accustomed to it, its continuation is easy; with others it is much more difficult. Self-consciousness with its attendants, self-repression and the habit of inarticulateness, are the obstacles to be overcome. Let no one be deterred by the bugbear of fostering conceit: attack on the inarticulate is of such immensely greater moment as to render considerations of the sort practically negligible. Skilful persistence in recitation can give voice to even the inarticulate, particularly if they find themselves (literally) on a stage.

Besides pictures the stage is the only material subsidiary adjunct essential to the teaching of English. A piece of apparatus that will serve many ends it merits a word of description. The kind of stage to which I am referring is portable. For many reasons, including cleanliness, the master's dais should be constructed in sections fitted with folding legs fully 18 in. high. One or more sections can readily be detached, the legs unfolded, the sections replaced side by side, and there at once is a stage admirably suited to the purpose in hand. Every one who has addressed an audience knows the advantage of speaking from a suitable height; every one knows, too, the strain such conspicuity imposes. To acquire the advantage we must master the strain. So must the boys and girls—and they do. An individual, less nervous than his fellows, asserts himself over his environment, rivalry sets in, the leaven

of the sense of power begins to be subtly diffused: it may even leaven the whole. Once the class is at home with this eminence the stage may be extended to other purposes, the delivery by members of the class of the whole or part of a lesson, the presentation of dialogues or class-plays, even—with modifications to be described later—of the school play. Whether such extensions of service are adopted or no the recitation competition should be continued throughout the Middle School, while to assist towards the retention of the passages learnt some victors at least should be included in the programmes of every sing-song, given by groups of forms or by the school.

In most of this work the master's part is mainly self-effacing—the necessary guidance and no more. But where the competition has proved that the standard of the class is low it would be well for him to read (or better, recite!) one or more passages himself, partly to assist the aims already stated, partly also to afford practice in the valuable art of listening. If he wishes he can test for the meaning by calling for the gist of the sense, either orally or in writing.

Competitions of that kind are bound to re-act healthily on the use of the school library, or better, libraries. Competitors, when allowed to choose their recitations, should be encouraged to select from their own library, a course which predetermines in a measure the nature and the contents of the libraries. These should be form libraries housed in the Form room, and especially arranged by the Form master or the teacher of English, under the general supervision of the senior English master or of the Head himself. On that plan the books are familiar to the teacher (great point!), they are suitable to the stage of development of each form, they overlap in contents, or should, they are accessible and they *will be used*. No trouble can be too great to provide the right books, none to secure free yet ordered access. In these libraries the "body of standard literature" that is to be the minimum for all *must* be lodged. For the subsequent purposes of comparison there should be the school library and the reference library. But without the form libraries these last have an awkward way of being dignified and imposing, but empty—of boys! Before you can compare you must have something to compare with, and the form libraries furnish the opportunities by which the necessary growth in the power of comparison may be attained. And if the form library includes sets of the half-dozen books the teacher wishes every boy to read while in that form the services of Home Reading (and of Reading Circles) can be effectively enlisted to ensure that the growth is natural, connected, and adequate. Incidentally, it should not be forgotten that Home Reading may extend our influence, where it is very desirable to extend it, to the home. We can never be sure that other members of the family may not be "wheeled in," and at times in what would appear to be very unlikely quarters.

The reading, reciting, and discussing of graded literature have a natural climax, so far as outward expression goes, in the school play. (There are still secondary schools which either have no stage at all or none adaptable to the representation of a play. Where nothing else can be obtained our portable stage affords a workaday stopgap. Place five or six sections together (numbered), insert their legs into two stout transverse beams a foot or more high, pierce the platform thus obtained with holes to carry the uprights of the proscenium, the wings, and the scenes, and you have a miniature stage sufficiently large for the presentation of such a play as *A Midsummer Night's Dream*. If all the parts are numbered the stage can be put together by persons previously quite unacquainted with the details.) Itself a vigorous incentive, it is to the long indirect preparation for it, no less than to direct rehearsals, that the teacher of English assigns the value of the play. Of these indirect preparations the last to be touched on here will be the informal school concert or sing-song. One or two might well be held in each of the winter terms. In addition to recitations they should include dialogues, one or two ten-minute

plays, of which there are now numbers available, or scenes from longer plays, including Shakespeare's. With encouragement boys and girls will produce original efforts suitable for the purpose, itself a stimulating plan. Rehearsals for these afford refreshingly effective opportunities for combating that persistent fundamental difficulty, oral expression. Phonetic methods of treating it are slowly coming into their own, but at present comparatively few schools have teachers who can employ them. Reliance must therefore be placed on the imitative method, and strong as the power of imitation is with the young its limitations are equally marked; the painfully acquired pronunciation is cast away with fatal ease and light-heartedness. But with the knowledge that their efforts will have to face the criticism, however sympathetic, of possibly the whole school, the actors are avidly desirous of being correct, and the teacher is refreshed with the consciousness that he has at last real access to a hitherto impervious ear. Once a serious beginning is made further progress is rapid; except with a thoroughly bad intonation, for which only the most skilled phonetic treatment can provide an approach to remedy.

A brief word on one other of the many services rehearsals can render, the introduction to life through the study of character. Discernment of character is quite embryonic with the young. How should it be otherwise, since it comes with experience of life? The oft-repeated statement that children quickly detect the character of the teacher is very misleading: where they are unerring is in detecting the presence or absence of strength, justice, sympathy. Other qualities and that hidden spur for the display of them, motive, grow slowly to their comprehension. Towards realizing these, rehearsals are a positive revelation. A boy is playing a rôle. Until he knows what his new "character" wants to do, his "words" are more or less obscure, even meaningless. But when he grasps that the motive is at one with his own occasional desires, akin to *himself*, human, the character begins to live to him. The result is an astonishing jump forward in intelligent expression, often on the part of boys previously regarded as dull, with equally astonishing changes in the teacher's appraisal of boys he may have felt he had long gauged with fair exactness.

Happy the school, too, that is so situated that it can inspirit its play by taking the actors, and others, to public performances of standard plays. That is all to the good, if merely to counteract the more equivocal appeals made by the stage and the cinema. Good taste can be developed as well as bad. But with boys actually engaged in rehearsing, the stimulus of witnessing a good performance of their own play is very great, for then they run the full gamut of their training, see the relation of their own parts to the whole, and observe the illuminating force of facial expression, of bearing and gesture, displayed by actors who are "not speaking" no less than by those who are. And while their minds are thus quickened by their own desire to act it should go hard with them if they hear nothing of what the play as a whole has to tell.

When supplementary aids have done their best towards widening the pathway into life provided by our language and literature they can be turned towards exhibiting the place along that path to which they have assisted in promoting English boys and girls—they can provide opportunities for self-expression. Says the Report: "The capacity for self-expression is essentially the measure of the success or failure of a school, at any rate on the intellectual side." Hard words, almost disheartening words when one reflects upon the tongue-tied material the teacher is often called upon to handle. Yet lack of courage, never a virtue, is to-day almost a crime; it is not the hardness of the words on which we should linger but their truth, for they are deadly true. For this great task we have two serviceable subsidiary implements at least, magazines and debates—debates (not discussions, which are the stock in trade of all healthy oral work) conducted according to the rules of debate, time limits, speaking once, and so forth.

These rules compel a boy to review all that he wishes to say, to place his thoughts in order, including his assent or dissent with previous speakers. Debates are thus the climax of discussions, and should therefore be first introduced to the boy in class, where he will soon realize, by early failures, the relation between the two. They can then be extended to sections of the school and to the whole school. In the earlier debates, as in early discussions, it does not matter greatly what a boy says, so long as he says something; it is the habit of not saying anything that has to be overcome. Begin early, therefore, and handle gently. At the outset a skilled chairman is everything, hence the rôle should be taken by the master. Sarcasm is fatal: his business is to encourage, to elicit. Later, the boys should occupy the chair themselves, preferably in turn, for chairmanship is a great quickener of intelligence. The subjects debated should be within their common experience, and highly contentious, the more contentious the better. "That the manual work suitable for boys is suitable for girls, and vice versa" is a good example. Above all things never be discouraged with the apparent paucity of result. Make debates really the climax of all those casual (i.e. natural) discussions that make every subject an "English" subject; in other words, deprive them of the taint of the artificial that pervades most prepared subjects, and they remain almost the most effective means of cultivating lucidity of thought. If the thought is not lucid, the attempt to utter it will not be lucid: the speaker will face the mortification of discovering that he has said only a fraction of what he intended to say, or that he has put his case confusedly. In either event he will be misunderstood, and eventually, always under sympathetic guidance, will seek for the remedy. His subsequent attempts should be better. He may not become eloquent, which is unnecessary, but he may become articulate, which is essential.

For written self-expression the form magazine is a rough parallel to discussions, the school magazine to debates. The problem is still the same—to get boys to contribute at all. Hence, with form magazines, preferably manuscript, the editor's hand should be conspicuously absent. Everything should be welcomed, and, where possible, applauded. The persistent *interest* (not *editorship*) of the master is the antidote to the meteoric career of many of these productions. Vigorous form magazines make a vigorous school magazine. Without them editors of the latter frequently complain that they cannot get their comrades to take active interest in what should be their general concern. Even with them the thing is difficult. That is largely due to the fact that boys are expected to go to the magazine, whereas the magazine should go to the boys. It is not sufficient to announce in editorials or in the Assembly Hall that their contributions will be welcomed; until the habit of contributing is established most boys are far too shy to put themselves forward in that way. Yet it is precisely "themselves" that we do want put forward. Occasional class essay competitions throughout the school may prove stimulating, the announcement being made that the attempts of some of the winners will appear in the magazine. The subjects may be chosen by the boys themselves (but written in class), or they may be set to the whole school or a section of it. Boys may be personally invited to contribute to the school notes; to try their hands at verse-making; to invent and set acrostics and similar problems; to furnish "original" jests, to resurrect the glories of the school as depicted to them by father, if he is an old boy; to describe the old school, in cases where new buildings have been erected; to narrate the experiences of relatives abroad; even to ventilate healthy grievances. The devices are legion. The trouble is that almost every boy will require at the outset personal approach, which should therefore not be left to the editors but should be the concern of the seniors and of the whole staff. What appears in the magazine is the business of the Magazine Committee; what is sent up to it is the business of every one.

In making these suggestions I have had in mind mainly those who are responsible for the formal teaching of English, though not specialists in the subject. They apply of course, in varying degrees, to every teacher in English. There is, after all, no supplementary aid to the teacher of English comparable with the wholehearted co-operation of all his colleagues.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

The question of co-operation and inter-working between British Universities has at last received official consideration. At the annual conference of the Universities of Great Britain and Ireland held in London on May 13, attended by

Conference of Universities. sixty representatives, a discussion of this subject was initiated by Dr. Farnell, Vice-Chancellor of Oxford, who admitted that it was becoming a physical and almost a financial impossibility for every university to teach everything. He favoured a certain degree of localization, *e.g.*, the teaching of metallurgy at Sheffield, and of selection in the case of subjects with few students such as Assyriology and astronomy. Mr. Fisher sensibly advocated the elaboration of a policy in this matter by the Universities themselves in preference to Government dictation. The country was in for a few lean years and the Universities would have to husband their resources. He suggested that University statutes might be amended so as to facilitate the migration of particular students with a view to their obtaining the advantages of specialized teaching. Dr. J. C. Irvine, Vice-Chancellor of St. Andrews, advocated the control of higher study and research within each University by a board or standing committee which would deal with the promotion of research and grants for travelling and publication.

Oxford. Mr. A. J. Jenkinson is contributing to the *Oxford Magazine* a series of articles on the Royal Commission Report. He is opposed to a large block grant from the Government, preferring the allocation of grants to specific objects. Dependence on annual grants is inconvenient if not contrary to the interest of the University. If the University "merges a more or less permanent subsidy in its general fund and makes all its activities dependent on money voted annually by Parliament out of the taxes, its subordination to a Department of State is only a matter of time."

Cambridge. The Chancellor, Lord Balfour, has been presented with an address expressing the Senate's high appreciation of his work at Washington and congratulations on his appointment as K.G.

The Financial Board has submitted to the Senate a report on Pensions for Assistants, Clerks, and Servants in University Departments. The retiring age proposed is to be sixty-five, and 5 per cent of salary is to be contributed by the employee and by his Department. Interest is to be allowed at 4 per cent. Certain older pension funds are to be amalgamated.

Mr. H. D. Auchinloss and Mr. H. P. Davison, Jun., of New York, are offering a scholarship of 2,000 dollars to members of the University, the scholarship to be tenable at Yale University. "The purpose of the donors . . . is to enable an Englishman to take part in undergraduate American life and therefore social qualities and athletic abilities as well as scholarship will be taken into consideration in making the award."

London. Presentation Day took place with the customary ceremonies on May 4. The Principal's Report shows vigorous growth and abounding vitality.

Candidates for all examinations numbered 27,237, comparing with 11,920 for 1913-14. The relative increase on the Internal side is notable. Whereas Internal and External candidates for degrees balanced at about 900 each immediately before the War, the numbers are now 1,543 Internal and 912 External. One of the most significant statistics is for the roll of Internal students, which now comprises 8,758 names as compared with 4,888 in 1914. Benefactions during the year make no great show, as is to be expected; nor does the record of developments in the organization of teaching present anything out of the ordinary. The establishment in "the near future" of a post-graduate medical school attached to a centrally-situated hospital—the name of which was not divulged—was foreshadowed, and also of an Institute of State Medicine which is to be endowed by the Rockefeller Foundation. Both developments will help London to realize its Imperial position. Without wishing to overstrain the meaning of the word "Report," one may regret that the Principal is so spare of

words in expounding the University's hopes and aspirations. Are those 8,758 Internal students, it may be asked, a happy band of brothers joined by a common loyalty? Inferentially an affirmative answer is given by the Principal's announcement of the formation of a Union Society which "appears to be on the high road to a stable success," and for which temporary accommodation has been found on the new Bloomsbury site. Any evidence that the University is beginning to realize corporate consciousness is welcome.

The battle of the sites has re-opened with redoubled fury. Notwithstanding the proverb which warns us against looking a gift horse in the mouth, Dr. Little, who claims to represent the medical graduates on the Senate, has stated his views on this question with great candour in a letter to *The Times*. Referring to the Bloomsbury site which was purchased by the Government for the University, he suggests that "A site without buildings, and with little prospect of building, is not an exhilarating exchange from even the present exiguous accommodation enjoyed by the University administration"—better the mutton chop than the "costly china plate." What impression a letter of this kind may produce on the public one can only surmise. The Senate after full and prolonged discussion have adopted *en principe* the policy of removing the headquarters of the University from South Kensington to Bloomsbury. In these circumstances, guerilla warfare might well be left to outsiders, such as the redoubtable Captain Swinton, whose advocacy of the Holland Park site is pressed with considerable ingenuity in the *Nineteenth Century* and elsewhere.

Convocation meeting on May 3 had a full and important agenda, which opened with an exciting contest for the Chairmanship between Dr. R. M. Walmsley and Mr. Sidney Webb. More than 500 members attended to record their votes, and in the result Dr. Walmsley was elected by a substantial majority. Dr. Walmsley is Principal of Northampton Polytechnic and a member of the Senate of long standing. The vacancy arose through the retirement of Sir Edward Busk after thirty years of service as Chairman. His distinguished record of University work includes membership of the Commission which helped to re-constitute the University in 1900 and a period of office as Vice-Chancellor. He was for many years Chairman of the Goldsmiths' College Delegacy, and took great interest in the military work of the University, serving for several years during and after the War as Chairman of the Military Education Committee. At the advanced age of seventy-eight he retains a full measure of energy and goodwill, and may fairly claim to be the Nestor of the University. His knowledge and experience will be greatly missed.

At the same meeting of Convocation, an interesting Report was received on the extension of the activities of the University. The Report, which stresses the need for establishing a relationship between the University and the skilled crafts, is written in a curious early Victorian style. A quotation will serve to illustrate. "The keynote of the present proposals is not the creation of a new profession or a new class of *talking* professors—of these among our industries there is already a plethora—we prefer to find means of discovering and encouraging the best *workers* and the best *instructors* to be found *within the ranks of those who work with their hands*, and to entrust to such the training and discipline of the generation who are to follow them in the world's workshops." A resolution was adopted by Convocation favouring co-operation between the University and the City and Guilds of London Institute, the London City Liveries Companies, and similar organizations, such as the London Chamber of Commerce and Trade Education Societies, in their attempts to reach the ranks of the skilled workers. Resolutions were also adopted advocating teaching experience as a necessary qualification for the Teacher's Diploma and for facilitating the admission of teachers to the Ph.D. degree by allowing such to offer a thesis on some pedagogical subject.

Durham. Dr. Wickham Hurd was re-elected Clerk of Convocation. The election of Dr. Arthur Robinson as Vice-Chancellor calls to this high office a graduate of the University who was for a time a secondary school teacher. He is at present, Professor of Logic and Psychology.

Leeds. The University has addressed to the University of Padua a graceful letter of congratulation in Latin on its seventh centenary. "Unhappily," the letter states, "we cannot send a delegate to you: we can recall, and we delight to recall, the debt owed to your University by Britain and all mankind." Then are recited the names of some great Englishmen who sought inspiration

MR. JOHN MURRAY

50a, ALBEMARLE STREET, LONDON, W. 1.

THE TEACHING OF ENGLISH.**Ready Shortly. A SENIOR ENGLISH GRAMMAR.**

By R. B. MORGAN, M.Litt. AND H. A. TREBLE, M.A.

Inspector of Schools to the
Croydon Education Committee.Senior English Master.
Selhurst Grammar School.

This book is intended to follow and to supplement "A New English Grammar," by R. B. MORGAN. The authors have made it their prime object to present in a brief and interesting form the laws upon which our present-day Standard English is based. One of its principal features is the large number of quotations from standard authors.

By R. B. MORGAN, M.Litt.

THE GROUNDWORK OF ENGLISH.

A complete course in English for Preparatory Classes. In 2 parts. 1s. 9d. each.

A NEW ENGLISH GRAMMAR. For Junior Forms. 67th thousand. 2s. 3d.**THE ELEMENTS OF GRAMMAR.**

(Part I of "A New English Grammar.") 1s.

EXERCISES IN ENGLISH GRAMMAR. Designed for use as an independent book, or to supplement "A New English Grammar." 1s. 9d.**READINGS IN ENGLISH LITERATURE.** By E. W. EDMUNDS, M.A., B.Sc.

- I. 1558-1625. Junior and Intermediate, 2s. Senior, 2s. 6d.
- II. 1625-1780. Junior and Intermediate, 2s. Senior, 2s. 6d.
- III. 1780-1880. Junior and Intermediate, 2s. Senior, 2s. 6d.

FULL PROSPECTUS ON REQUEST.

ENGLISH COMPOSITION. For Junior Forms. By E. E. KITCHENER, M.A., Whitgift Grammar School, Croydon. 2s. 3d.**EXERCISES IN ENGLISH COMPOSITION.** By E. E. KITCHENER, M.A. Designed for use as an independent book, or to supplement the above 1s. 9d.**MATTER, FORM AND STYLE.** By HARDRESS O'GRADY. 3s.**LATIN.****LIMEN. A First Latin Book.** By C. F. WALTERS, M.A., and R. S. CONWAY, Litt.D. Sixth Revised Edition. 4s. Two Parts, 2s. 6d. each. Teacher's Edition, 5s. Appendix and Dialogues for Acting, 9d.**ANTE LIMEN. A New Latin Book for Younger Beginners.** Compiled under the guidance of Professors WALTERS and CONWAY. By Miss R. H. REES, B.A. 3rd Impression. 2s.**LATIN TRANSLATION AT SIGHT.** Passages of Graduated Difficulty, carefully selected from Latin Authors, with Explanations, Notes, etc. By T. D. BELL, B.Sc. 2s. 6d.**PRIZES**

Mr. Murray's new Catalogue of Books suitable for School Prizes, will be helpful when making your selection. It will be posted on request.

at Padua, including William Harvey, the discoverer of the circulation of the blood, a worthy student of the University which Vesalius adorned, the Father of Anatomy.

The list of honorary degrees to be conferred in the autumn includes the name of Sir Richard Gregory, who is to receive the D.Sc. degree.

WALES.

Welsh County Schools Association. This Association of Head Masters and Head Mistresses of Secondary Schools in Wales met at Llandrindod Wells on April 28 and 29, under the chairmanship of Mr. D. E. Williams, the head master of Gowerton County School.

There were several interesting discussions on current educational topics and some valuable papers were read. The recent report of the Welsh Department on certain aspects of the work of the intermediate schools was subjected to a good deal of adverse criticism; and the members present felt that the Department has not yet wholly abandoned its practice of giving undue and unfair prominence to certain uncomplimentary remarks in the reports of the examiners of the Central Welsh Board. Criticism which is felt to be unfair and one-sided is usually ineffective. The meetings were addressed by Mr. O. Glynn Jones, H.M.I., on "War Savings in Secondary Schools," who in a forceful speech, urged upon all school authorities the importance not only of helping the country financially at the present time, but also laid great stress on the educational aspect of the scheme.

The Teaching of English and Classics. Interesting papers on the recent reports on the Teaching of English and of Classics were read by Miss Rowlands, of Ruthin School, and Mr. Lloyd of Newport High School. The former report has only the slightest reference to conditions in

Wales, but its general conclusions and its broad and sympathetic treatment of the subject are of the greatest possible assistance to Welsh teachers. Language teaching is of course complicated by the bilingual character of the people, and Wales has to face peculiar difficulties in the way of teaching English and also to resort to special methods in a great many of the schools. All the same, the above report contained many valuable suggestions which can easily be put into practice in the Welsh Secondary Schools. The position of Greek especially is causing much heart-burning, and there exists a genuine apprehension that it will disappear as a school subject. The Central Welsh Board is so impressed by the precariousness of the position of language teaching in the schools that a special session was devoted to it at the meeting held at Colwyn Bay. It was generally agreed that the unfortunate policy of the University of Wales of allowing candidates even to gain high honours in Latin without the slightest acquaintance with Greek was very largely responsible for the present position. This system of separating the two classical languages was generally regarded as educationally indefensible, and therefore should be revised at the earliest opportunity. An unfortunate result of this policy is that it is well nigh impossible to obtain men or women from the University of Wales who are qualified to teach both Latin and Greek in the schools to a high standard.

Deficiency Grants. Some excitement was created when the circular of the Board of Education restricting the operation of the deficiency grant to schools supplied by local authorities, was first issued. As the Welsh

Intermediate Schools were established under the Welsh Intermediate Education Acts of 1889 and are only aided by the local authorities, it was feared that they would not be entitled to a share of the deficiency grant under the terms of the Circular. The answer of Mr. Fisher to a question in Parliament by Mr. Morgan Jones, M.P., is, however, somewhat reassuring, because it is apparently the intention of the Government to deal with aided schools on the same lines as provided schools, but a definite pronouncement on the position of the Welsh Intermediate Schools will no doubt be made at an early date. To lose their share of the deficiency grant would be a serious setback to these schools, and therefore it is impossible to believe that the Government contemplates such an act of injustice.

Another conference to discuss the details of the scheme drawn up by the three sub-committees will be held at Llandrindod Wells on June 2.

The National Council of Education.

That the question of representation is the crux of the situation is made evident by the issuing of two schemes of representation. According to the scheme recommended the Council will be composed mainly of representatives of local education authorities, with Glamorgan,

with its thirty-one members, greatly preponderating over the other authorities. The Council will be a huge elective body, and therefore of doubtful efficiency. It will be difficult to preserve its democratic character because from its unwieldiness it will not be capable either of initiating any policy or exercising any real control. Its chief functions will therefore of necessity be allocated to executive committees which will be to a great extent independent of public opinion. No doubt ultimately, when many possible solutions have been tried, a scheme will be evolved which will meet the requirements of the problem, but just now Wales seems to be too prone to establish huge governing bodies which rapidly degenerate into mere debating societies with no constructive policies.

Guild of Graduates. The Guild of Graduates has elected the following representatives on the University Courts: Mr. Edgar Jones, Prof. Ivor Williams, Mr. F. E. Rees, Mr. Ernest Hughes, Profs. Parry Williams, G. A. T. Davies, Campbell James, and Phillips, and Miss Vivian, of Newport. Profs. Morgan Watkin and Parry Williams were also elected on the Board of Celtic Studies.

School Fees. The Welsh Department has written to the Monmouthshire Education Committee recommending the raising of fees of all pupils at the Secondary Schools during the next school year, but no definite decision has been given up to the present. Since the fees in this county in the secondary schools are either non-existent or very low, it appears that it might be possible to conform with the recommendation without inflicting much hardship on the parents.

SCOTLAND.

The Universities (Scotland) Bill. Presented to Parliament last session, and subsequently withdrawn in consequence of the opposition it provoked, The Universities Bill has reappeared with some considerable changes, and has been passed by the House of Lords. The device by which conflicting opinions have been conciliated in order to get a measure likely to secure general agreement is to give the four universities power to draw up ordinances on the matters at issue. In addition to the establishment in this way of an age limit for principals and professors, and of a supplementary pension scheme for them, provision is made for ordinances for the admission of lecturers or readers to the senates on certain undefined conditions and for lecturers or readers coming from another university becoming members of the general council after one year's service. The Bill falls short of the demand of the junior staffs of the universities for representation on the governing bodies, but if the schemes for their admission to the senates, to be embodied in the several ordinances, are conceived on generous lines, most of them will be fairly well satisfied.

Sir James Barrie, Lord Rector. There was a time when serious-minded students protested against the election of politicians to the rectorships of the Scottish Universities, and argued—usually in vain—for the honour being given to distinguished men of letters. During the War the university population had something more engrossing on hand than election fights, and the non-political Lord Rector got his chance. The appointment of Sir James Barrie to the Rectorship of St. Andrews, made after the war but under its influence, has been such a triumphant success that the argument for the man of letters versus the politician as Lord Rector has been much strengthened. Greatly daring, Sir James couched his address and the many incidental speeches at his installation last month in the combined strain of wit and wisdom that is all his own, and played the part of the student among students with an abandon which carried all before it. His whimsical humour, due, as he explained, to McConnachie, the incalculable double who led him into all sorts of vagaries in spite of the restraints of the sane practical Barrie, revealed him indeed as the Student that Never Grew Up. Never was such a Lord Rector as this, chaffing grave dignitaries, playing comical cricket with Earl Haig and Principal Irvine, obviously enjoying the whole game of installation. It was fitting that the theme of his address should be the high courage of youth, and that he should enter into the lists for the young in the perennial conflict of youth and age. It was fitting, too, that remembering his own career and the careers of many Scottish students, he should end up an address that sometimes charmed and sometimes thrilled, and that never lost its grip, with a panegyric on the "poor proud homes" which

AND AT GLASGOW AND BOMBAY.

had been Scotland's oldest university. Earl Haig, who made his debut as Chancellor of St. Andrews on this occasion, was in a manner eclipsed by the Lord Rector, but his turn will come in due season. Scotland's oldest university is fortunate in having two such men in its highest posts.

Advantage was taken of the gathering at St. Andrews for the installations of Earl Haig and Sir James Barrie to confer honorary degrees on a galaxy of distinguished people. There were men of the Army and the Navy like Colonel Freyberg, V.C., whose valour was used by Sir James Barrie in his address as an illustration of the "lovely virtue" of courage, and Admiral Wester Wemyss; men of letters like Mr. Galsworthy, Mr. Hardy, Sir Sidney Colvin, and Sir William Robertson Nicoll; a great artist, Sir James Guthrie; the Lord Provost of Glasgow, and most outstanding of all, Miss Ellen Terry. No one grudges the recipients of these degrees the honour done to them by the University or the University the honour it gains through its association with them. But this star list with the lists of the other universities and the ordinary list of St. Andrews has caused a good deal of comment on the whole subject of honorary degrees. One aspect of the question was touched upon at a meeting of the General Council of Edinburgh University on the same day as the St. Andrews' celebrations. In moving that a committee be appointed to inquire into the regulations under which the degree of Doctor was conferred in the various faculties with a view to modifications of them, Mr. Neil Maclean, advocate, said that it seemed perfectly ridiculous that if some man discovered a poleless and railless method of tramway traction he should be honoured by the university not as a Doctor of Science, but as a leading light in jurisprudence. That criticism is quite sound, and calls for some new way of marking academic appreciation of public service in any sphere. But the difficulty goes deeper. It is in the fact that the choice of honorary graduates is entirely a matter for the senates, theoretically without aid from outside suggestion. That means that people of professorial rank figure to an unduly great extent on all the lists—this year, excluding the St. Andrews' special graduation, sixteen of the thirty-four LL.D's created are professors—and that achievement by men outside the charmed circle is mainly recognized in the case of persons who already enjoy great reputations. If the Edinburgh Committee, strengthened as was suggested by the co-operation of similar committees in the other centres, can indicate a better method of selection than the present, it will probably find no warmer welcome than from members of the senates, most of whom find their present task both irksome and unsatisfactory.

In an address to the Midlothian Branch of the Educational Institute Sir Donald Maclean advised Scottish teachers to accept the change from a non-contributory to a contributory scheme of superannuation, as the teachers' contribution to national financial stability. There is, however, a growing determination on the part of the rank and file of the profession to oppose the proposal. What seems to weigh with them is not merely that the superannuation scheme in its present form was one of the factors taken into account in fixing the Minimum National Scales, and that the change to that extent involves a certain breach of faith, but even more the fact that the 5 per cent deduction from salary is likely to be but the beginning of a larger scheme of deductions once the authorities are compelled to finance their schools on a reduced grant. Statistically-minded teachers further contend that 5 per cent is an excessive figure. The matter was illustrated thus at a recent meeting: Assuming, it was said, that a teacher serves for forty-five years on a salary of £130, rising by £10 per annum to £300, and reckoning compound interest at 5 per cent, it may be calculated that the pension fund arising from a 5 per cent contribution on such a salary will, on the date of retiral, amount to £1,881. This is sufficient to pay the maximum lump sum of £450 and to provide the annual pension for thirteen and a quarter years. To obtain, therefore, the full benefit of such a scheme, the teacher must begin duties not later than her twentieth birthday, teach till the age of sixty-five, and live till she is seventy-eight. Only after that will the State begin to make its "contribution" to the retired teacher, as compensation for the withdrawal of her certificate.

The establishment of county areas by the 1918 Act has greatly intensified the difficulty of making right appointments and promotions in the case of teaching posts, and both authorities and teachers have turned their thoughts to the matter in the last year or two. The latest experiment, made by the Edinburgh

GOOD SPEECH.

By WALTER RIPMAN, M.A. 2s. 6d.

A book for Teachers and the General Public, dealing simply with the proper pronunciation of English, using a simple scheme of Phonetics and investigating this interesting subject in a non-scholastic manner.

PLEASE WRITE TO THE PUBLISHERS FOR DETAILED PROSPECTUSES OF THE ABOVE.
ALDINE HOUSE, BEDFORD STREET, LONDON, W.C. 2.

Authority, with a view to eliminating canvassing, both direct and indirect, must be added to the list of plans of appointment that have failed. Some time ago the Authority agreed that candidates for important posts should be known only by numbers. But the zeal and ingenuity of the canvasser, aided no doubt by the objection that some members of the Authority had to making appointments where personality counted for much in this impersonal way, has led to the breakdown of the scheme. It was found that in certain cases some of the numbers by a mysterious process came to have a person associated with them. The problem is admittedly a difficult one, partly because there are forms of canvassing which are legitimate and honourable, and partly because the temptations to any kind of canvassing are very great. But if the Authorities were to invite the co-operation of teachers something might be done to prevent the grosser forms of canvassing. The Institute's code of professional etiquette contains a prohibition of canvassing in those cases in which an Authority has an express rule against it. That prohibition cannot be enforced till the Authorities show that they really respect their own rule. Let them begin with that and they will be able to appeal to the sense of professional decency which finds expression in the code of etiquette.

IRELAND.

The annual meeting of the Irish National Teachers' Organization which was held in Dublin in Easter week, provided an opportunity for the Ministers of the Free State to make a public statement as to their educational aims and policy, and also for the National Teachers to urge their proposals for educational improvement. Both Mr. M. Hayes, the Minister of Education in Dail Eireann, and Mr. F. Lynch, the Minister of Education in the Provisional Government, delivered addresses. Mr. Hayes declared that teachers in Ireland whatever their class or creed had nothing to fear from the new Government. The Government's aim was a Gaelic or Irish Ireland, an ideal to be attained mainly through the schools. The whole-hearted interest of the Irish people and the goodwill and co-operation of the teachers were necessary in the effort being made for the success of education in Ireland. In the new conditions of affairs teachers would have due voice, due weight, and due consideration in educational plans, schemes, and programmes. The new primary programme had been very largely the work of primary teachers, while secondary teachers were represented on the committees of the Commission who were drawing up the programme for secondary schools. While the millenium had not arrived for the teachers, in future administrations they might anticipate that their co-operation and advice would be expected. In the long run educational progress in Ireland must depend on the interest people took in their educational problems. Mr. Lynch referred to three things: first, no injustice from officials towards the teachers would be tolerated, and the inspectorate would be expected to maintain friendly co-operation with the teachers. Secondly, he outlined the scheme for teaching the Irish language to teachers, and stated that it was intended this summer to close the national schools in the country districts for three months in order that the teachers might have the opportunity for intensive study of the language. And thirdly, he invited definite information from the congress as to their proposals in the matter of pensions, as the Government were fully aware of the many sterling services rendered to Ireland by the older teachers.

The Congress itself then discussed the new programme, the classification of teachers, the relation of inspection to examination, the university training of national teachers with an appreciation of the action of Trinity College, the connexion of primary and secondary schools, and a proper pension scheme, but above all it urged the need of a new Compulsory Attendance Act. Ireland as compared with England or Scotland presented a sad spectacle in regard to attendance. In Scotland the percentage of attendance of children on the school rolls was 86, in Ireland 69. But the position was worse even than on this showing, for in Ireland there was a large number of children of school-going age whose names never appeared on the rolls, and allowing for this the average would certainly not reach 60 per cent. Add to this that the school leaving age was twelve, and it was easy to see how much leeway was to be made up in Irish education. The progress and prosperity of the country would be little without the trained hand and mind of the citizen.

The scheme for teaching Irish to the teachers referred to above in Mr. Lynch's address has been issued in a circular from the National Education Office. Outside Dublin and Cork the course will begin on July 4 and end on August 25. National schools in which the majority of the teaching staff are called up for training, will be closed on June 30 and will reopen on September 25. In Dublin and Cork cities, the schools will close for July and August only, but from June 1 to June 28 the schools will be open only up to 12.30 daily, and during this period teachers will be required to attend an afternoon course of instruction in Irish five days a week. Teachers who hold full or bilingual certificates and teachers who desire to become professors will be afforded opportunities to gain greater proficiency in Irish.

The authorities of Dublin University have issued in book form the War List of the University. It includes the names of 3,042 members of the University, 450 members of the Officers' Training Corps who were not members of the University, 26 employees of the College, and 11 who were in the employment of the College Printing House, making a total of 3,529 names. Four hundred and fifty-four members of the University were killed or died on service, and 343 others were wounded. The list includes 869 undergraduates who gave up their college course to serve in the war. To perpetuate the memory of those who died, a War Memorial Fund was inaugurated two years ago, and over £6,000 has been collected, but an appeal is made for £2,000 more to carry out the scheme which the Executive Committee have proposed, and which the General Committee have approved. It has been decided that the memorial shall take the form of a Hall of Honour, to be built as a vestibule or entrance to a new library reading room, with the names of the fallen inscribed on the walls of this new hall.

It has been definitely decided that there shall be two Registers of Intermediate School Teachers in Ireland. The Acts of Parliament leave no option in the matter, and the resolutions of the Registration Council itself and of the Intermediate Board have had no effect. Up to the present the Ministry in Northern Ireland has not appointed a Registration Council, nor has it admitted any names to registration on its own account. Its position, however, is this: that all teachers who were registered or provisionally registered before the "appointed day," viz. February 1 last, when the Northern Government took over the control of education, are to be deemed as registered or provisionally registered in the Register of Intermediate School Teachers in Northern Ireland. So long as teachers satisfy the requirements of the regulations, the Ministry is prepared to register them irrespective of whether they are domiciled in Northern or in Southern Ireland. These regulations will probably necessitate a reorganization of the Registration Council in Southern Ireland, but whatever happens, one may hope that the two Councils will try to work on the same lines and to co-operate so far as is possible.

FOREIGN AND DOMINION NOTES.

FRANCE.

While the War lasted its horrors were endured as being necessary to the attainment of eternal peace. In "philosophie," Not chosen deliberately, the method seems to have been illusive, and we have the French *Journal Officiel* indicating new military Bills "en vue de la guerre." Nor do International Conferences prove exactly Love Feasts. What then is to be done if we would harmonize mankind? We must work in the world of thought, say some, and begin with the young and in the school. The French *lycée* has a "classe de philosophie," with pupils seventeen or eighteen years old, a class to which the English public school has no parallel. What is being taught and what ought to be taught in "philosophie," these are questions considered by M. André Jousain in the *Revue Universitaire* (xxxi. 4). He would remove from the list of authors to be studied, Kant "écrivain médiocre et obscur," nor stuff young minds with a barbarous vocabulary all bristling with technical terms peculiar to their German inventor. We remark, in passing, that Victor Cousin, censorious of Kant's metaphysical system, extolled his moral system as belonging to all ages. Above all, M. Jousain would eject from the school Spinoza, from whom—according to Victor

(Continued on page 368.)

Prizes

Now is the time to order before the rush comes and while stocks are good.

We have actually in stock a very fine selection of books bound in leather and fancy bindings.

Customers visiting the Showroom can select books from the Book-cases.

At very moderate prices.

Why not order early to ensure a good selection?

No prize is so appropriate for a school as a book stamped in gold with the school crest or name.

A Catalogue of Prize Books bound in leather and fancy bindings free to Heads on request.

BELL'S STANDARD TEXT-BOOKS

MATHEMATICS

Issued complete with or without answers; in many cases the Examples are published separately; most of the books are also issued in parts. Please write for details.

MR. PENDLEBURY'S WORKS

- Pendlebury's Arithmetic.** With 8,000 Examples. 29th Edition. 5s. 6d.
Pendlebury & Robinson's New School Arithmetic. 19th Edition. 5s. 6d.
Pendlebury & Beard's Commercial Arithmetic. 15th Edition, revised. 3s. 6d.
Pendlebury & Beard's Business Arithmetic. 3s. 6d.
Pendlebury & Beard's "Shilling" Arithmetic. 608th Thousand. 1s. 9d., or with answers, 2s. 3d.
Pendlebury & Beard's Elementary Arithmetic. 14th Edition. 2s.
Pendlebury & Robinson's New "Shilling" Arithmetic. 15th Edition. 1s. 9d., or with answers, 2s. 3d.
Pendlebury & Robinson's Junior Arithmetic. 13th Edition. With or without answers, 2s. 9d.
Pendlebury's Preparatory Arithmetic. 4th Edition. With Revision Papers, 2s. 6d.
Pendlebury's Elementary Trigonometry. 7th Edition. 5s.

TEXT-BOOKS by Messrs. BAKER & BOURNE

- Public School Arithmetic.** 6th Edition. 5s. 6d.
The Student's Arithmetic. 8th Edition. 4s.
A "Shilling" Arithmetic. 5th Edition. 1s. 9d., or with answers, 2s. 3d.
Elementary Algebra. 18th Edition. 6s.
A Shorter Algebra. 5th Edition. 3s. 6d.
A First Algebra. 9th Edition. 2s. 6d., or with answers, 3s.
Elementary Geometry. 13th Edition, revised. 5s. 6d.
A New Geometry. 5th Edition. 4s.
A First Geometry. 6th Edition. 2s. 3d.
Elementary Mensuration. 4th Edition. 2s. 6d.

Messrs. BORCHARDT & PERROTT'S WORKS

- Geometry for Schools.** 5s. 6d.
A New Trigonometry for Schools. 12th Edition. 5s. 6d.
A Junior Trigonometry. 4s. 6d.
A First Numerical Trigonometry. 3s. 6d.

MR. DURELL'S RECENT TEXT-BOOKS

- A Concise Geometry.** By CLEMENT V. DURELL, M.A., Senior Mathematical Master, Winchester College. 2nd Edition. 5s.
Elementary Algebra. By C. V. DURELL, M.A., G. W. PALMER, late Master of the Royal Mathematical School, Christ's Hospital; and R. M. WRIGHT, M.A., Eton College. With detailed introduction and full answers, for teachers' use, 8s. 6d.; without introduction and with only select answers, 7s.
PART I. by C. V. DURELL and G. W. PALMER. 3rd Edition. 4s. 6d. and 3s. 6d.
PART II. by C. V. DURELL and C. M. WRIGHT. 2nd Edition. 5s. 6d. and 4s. 6d.

WORKS BY MR. R. C. FAWDRY

- Statics.** By R. C. FAWDRY, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. 6s., or in two parts. Part I, 7th Edition. 3s. Part II, 4th Edition. 3s.
Dynamics. 6s. Or Part I, 3rd Edition. 3s. Part II, 3s.
The First Parts of these two books have been issued bound together, in response to requests received from many teachers. 8s.
Co-Ordinate Geometry (Plane and Solid) for Beginners. 5s.
[Bell's Mathematical Series.]

MATHEMATICS—continued

- Arithmetic.** By H. FREEMAN, M.A. 8th Edition. Price reduced to 2s. 9d. [Bell's Mathematical Series.]
A "Shilling" Arithmetic. By J. W. ROBERTSON, M.A., B.Sc. 6th Edition. 1s. 9d.; with answers, 2s. 3d. [Bell's Mathematical Series.]
Arithmetic. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A. Part I, 4th Edition, 4s. Part II, 3s. 6d. Answers to Revision Papers, 1s. net. [Bell's Mathematical Series.]
A Short Course in Commercial Arithmetic and Accounts. By A. RISDON PALMER, B.Sc., B.A. 2s. 6d. [Bell's Mathematical Series.]
Practical Mathematics. By A. DAKIN, M.A., B.Sc. 5s. [Bell's Mathematical Series.]
Plane Trigonometry. By H. L. REED, M.A., 5th Edition. 5s. [Bell's Mathematical Series.]
Analytical Geometry of the Straight Line and Circle. By JOHN MILNE, M.A. 5s. 6d. [Bell's Mathematical Series.]

SCIENCE

PROF. SMITH'S BOOKS

- Intermediate Chemistry.** By ALEX. SMITH, B.Sc., Ph.D., F.R.S.E., Professor of Chemistry and Head of the Department, Columbia University. 9s. 6d. net.
"Prof. Smith possesses in a high degree the art of giving concise information in a clear and interesting manner, and this book adds one more to the number for which chemical students are indebted to him."—Educational Times.
Introduction to Inorganic Chemistry. 35th Thousand. 12s. 6d. net.
General Chemistry for Schools. 45th Thousand. New Edition, revised and enlarged. 10s. 6d. net.
Elementary Chemistry for Schools. Adapted for use in English Schools by H. A. WOOTTON, M.A., B.Sc., Head Master, Kingswood School, Bath. 2nd Edition. 7s. 6d. net.
Laboratory Outlines are available for use with each of Prof. Smith's text-books.
Inorganic Chemistry. By Sir JAMES WALKER, D.Sc., Ph.D., F.R.S. 14th Edition, revised and enlarged. 5s. net.
Inorganic Chemistry for Upper Forms. By P. W. OSCROFT, M.A., Uppingham School. 4th Edition, revised. 7s. 6d. net.
An Introduction to Chemistry. By D. S. MACNAIR, Ph.D., B.Sc. 11th Edition. 3s. net.
An Experimental Course of Physical Chemistry. By J. F. SPENCER, D.Sc., F.I.C. 2 Vols. 2nd Edition, revised and enlarged. Vol. I.—Statistical Experiments; Vol. II.—Dynamical Experiments. 6s. net each.
Fundamental Principles of Organic Chemistry. By Prof. CHARLES MOUREU. Authorized Translation from the Sixth French Edition by W. T. K. BRAUNHOLTZ, B.A., A.I.C. With Introduction by Sir W. J. POPE, K.B.E., F.R.S. 12s. 6d. net.
A First Year's Course of Chemistry. By JAMES SINCLAIR, M.A., B.Sc., Head Master of Shawlands Academy, Glasgow, and G. W. M'ALLISTER, M.A. 3rd Edition. 2s. 6d.
A Three Years' Course in Practical Physics. By JAMES SINCLAIR, M.A., B.Sc. In Three Parts. With numerous Diagrams. 2s. 3d. each.
The World of Sound. Based upon Royal Institution Lectures. By Sir WILLIAM BRAGG, K.B.E., F.R.S., D.Sc. School Edition. 5s. net.
A Guide to the Preparation of a Note-book of Biology. By E. W. SHANN, B.Sc., Biology Master at Oundle School. 2s. 6d. net.
An Introduction to the Study of Plants. By F. E. FRITCH, D.Sc., Ph.D., F.L.S., and E. J. SALISBURY, D.Sc., F.L.S. 6th Edition. Illustrated. 7s. 6d. net.
Elementary Studies in Plant Life. By F. E. FRITCH and E. J. SALISBURY. 5th Edition. 3s. 6d. net.
Elementary Botany. By PERCY GROOM, M.A., D.Sc., F.L.S. 16th Edition. 5s.
Practical Plant Physiology. By FREDERICK KEEBLE, Sc.D., F.R.S., assisted by M. C. RAYNER, B.Sc. With numerous Illustrations. 2nd Edition. 4s. 6d.

BELL'S STANDARD TEXT-BOOKS

ENGLISH

AN OUTLINE HISTORY OF ENGLISH LITERATURE. By W. H. HUDSON, late Staff Lecturer in English Literature to the Extension Board, London University. 7th Edition. 4s. net.

"A useful little survey, paying more attention to the tendencies and developments of literature than to the mere chronology of authors and their writings."—*Times*.

REPRESENTATIVE PASSAGES FROM ENGLISH LITERATURE. A companion volume to the above. 8vo. 3rd Edition. 3s. 6d. net.

"A wonderfully varied and satisfying scheme of literary illustration."—*School World*.

A SHORT HISTORY OF ENGLISH LITERATURE IN THE NINETEENTH CENTURY. By W. H. HUDSON. 3rd Edition. 4s. net.

INTRODUCTION TO ENGLISH LITERATURE. By H. S. PANCOAST. 4th Edition, enlarged. 7s. 6d. net.

A FIRST VIEW OF ENGLISH LITERATURE. By H. S. PANCOAST and PERCY VAN DYKE SHELLEY. With 44 Illustrations and 2 Maps. 7s. 6d. net.

BELL'S SHAKESPEARE FOR SCHOOLS. Edited by S. P. B. MAIS, M.A. With numerous illustrations by BYAM SHAW. Fifteen volumes now ready. 1s. 9d. each.

"Mr. Mais makes his pupils enjoy Shakespeare, and does not weary them with overmuch detail or frighten them with the bogey of examinations. He gives a human touch to the prefaces and general introductions. . . . The illustrations by Byam Shaw greatly add to the pleasure given by these attractive volumes."—*Journal of Education*.

HANDBOOKS OF ENGLISH LITERATURE. Edited by the late J. W. HALES, M.A., Professor of English Literature, King's College, London.

12 volumes, each written by a recognized authority covering English Literature from the Age of Alfred (884-1154) to the Age of Tennyson (1830-1870). 5s. net each.

ESSAYS AND ESSAY WRITING. By A. W. READY, B.A. 8th Edition. 3s. 6d. net.

PRESENT-DAY PRÉCIS. By A. W. READY, B.A. Revised Edition. 3s.

"An admirably planned and most useful treatment of the subject."—*Scottish Educational Journal*.

MATRICULATION PRÉCIS. By S. E. WINBOLT, M.A., Christ's Hospital. 3rd Edition. 1s. 6d. net. Key separately, 6d. net.

ENGLISH COMPOSITION. By R. S. BATE, M.A. 4s. 6d.

"One of the most complete and serviceable books that have recently come before us."—*Journal of Education*.

MASON'S GRAMMARS. Revised Editions.

Junior English Grammar. 11th Edition. 125 pages. 2s.

Intermediate English Grammar. 5th Edition. 218 pages. 3s.

Senior English Grammar. 5th Edition. 376 pages. 4s. 6d.

ELEMENTARY ENGLISH GRAMMAR THROUGH COMPOSITION. By JOHN D. ROSE, M.A., Rector of the Kirkcaldy High School. 7th Edition, revised. 1s. 9d.

ADVANCED ENGLISH GRAMMAR THROUGH COMPOSITION. By JOHN D. ROSE, M.A. 4th Edition. 3s. 6d.

AIDS TO THE WRITING OF ENGLISH COMPOSITION, for the Lower Forms of Secondary Schools. By FRED W. BEWSHER, B.A. 4th Edition. 1s. 9d. net.

EXERCISES IN ENGLISH. By FRED W. BEWSHER, B.A. 3rd Edition. 2s. net.

A FIRST ENGLISH GRAMMAR. By Rev. J. E. W. WALLIS, B.A., formerly Preparatory School, Christ's Hospital. Second Edition. 1s. 9d.

A PRACTICAL COURSE IN ENGLISH. By E. J. BALLEY, B.A., Whitgift Grammar School, Croydon. 4th Edition. 2s. 6d.

FRENCH

LE FRANÇAIS. A Practical French Course. By MARC CEPPI, Senior Modern Language Master, Victoria College, Jersey, and LL. J. JONES, B.A., Whitgift School. Now complete in 2 parts. Part I, 3s.; Part II, 3s. 6d.

This new course, founded on the recommendations of the Government Committee appointed to inquire into the Position of Modern Languages, 1918, is being extensively adopted; Part I is already in its 18th thousand. The course is written on semi-direct lines, and the subject-matter is closely related to the everyday life of the average student.

In response to numerous requests, an edition of Part I has been published for use with the Direct Method, printed in French throughout.

"I am at present using three of Mr. Ceppi's books in this school," writes a teacher of French, "and think that what he does not know about writing French books for boys is not worth knowing."

GRAMMAIRE FRANÇAISE MODERNE. By M. DES-HUMBERT, late Professor at the Staff College, Camberley, and MARC CEPPI. 2nd edition. 3s. 6d. net. (Also issued with the Grammatical Rules in English.)

A list of Marc Ceppi's well-known works will be sent on request, including full details of the following readers:—EASIEST FRENCH READER, SIMPLE FRENCH STORIES, CONTES FRANÇAIS, RÉCITS HÉROÏQUES, C'EST LA GUERRE, L'HISTOIRE DE PETER PAN, FLIPS ET COMPAGNIE, FRENCH DRAMATIC READER, TALES FROM MOLIÈRE.

BELL'S ILLUSTRATED FRENCH READERS. Edited by O. H. PRIOR, D.ès L., Professor of French in the University of Cambridge. With brief notes and vocabularies. Illustrated. 7 vols. now ready. 1s. 3d. each.

BELL'S SHORT FRENCH TEXTS. Edited by MARC CEPPI. Designed for rapid reading, and containing short introduction and brief notes or vocabulary. 6 vols. now ready. 10d. net each.

BELL'S STANDARD FRENCH TEXTS. Edited by MARC CEPPI. 6 vols. now ready. Prices from 1s. 6d.

This series of texts contains old favourites, carefully edited to meet the requirements of Schools and Colleges. Each volume is issued in duplicate form, one edition being entirely in French.

THE DIRECT METHOD OF TEACHING FRENCH. By D. MACKAY, M.A., Avy Academy, and F. J. CURTIS, Ph.D. **First French Book.** With 22 illustrations. 10th Edition, revised. 2s. net. **Second French Book.** With 38 illustrations. 11th Edition. 2s. 6d. net. **Subject Wall Picture** (Coloured), for use with the above, 60 in. by 40 in., mounted on rollers. 12s. 6d. net.

"A capital exposition of the principles of the reformers in modern language teaching."—*The Journal of Education*.

BELL'S FRENCH COURSE. By R. P. ATHERTON, M.A., Assistant Master at Haileybury College. Illustrated. PART I. With Vocabulary. Fifth Edition. 2s. PART II. Third Edition. 2s. 6d.

A KEY TO THE EXERCISES, Part I, 6d. net; Part II, 1s. net.

"Mr. Atherton has thoroughly grasped the principles of the 'reform method,' and his application of them is marked by intelligence, liveliness, and variety. The book is constructed on sound lines, and the details are well worked out."—*Guardian*.

A FIRST FRENCH PROSE COMPOSITION. Based on Conversation and Imitation. By F. W. WILSON, Ph.D., and C. A. JACCARD, L.ès L., Assistant Masters at Clifton College. 5th Edition. 2s. 6d. net. KEY, 10d. net.

A MATRICULATION FRENCH FREE COMPOSITION. By F. A. HEDGCOCK, M.A., Doc.ès Lettres, and H. LUGUET, Agrégé de l'Université de Paris. 3s. 6d. net.

FRENCH COMPOSITION BOOK. By MARGARET KENNEDY, M.A. 6th Edition. 1s. net.

BELL'S FRENCH PICTURE CARDS. Edited by H. N. ADAIR, M.A. 3 sets. 2s. net each. Full details on application.

GASC'S WELL-KNOWN FRENCH DICTIONARIES, widely recognized as having no equal in their own field. **Gem.** 137th thousand. 2s. net. **Pocket.** 106th thousand. 3s. 6d. net. **Concise.** 10th Edition. 6s. net; or in two parts, 3s. net each. **Standard.** 16th Edition. 12s. 6d. net.

Details of New Books will be found on Page 332

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2

Delbos—the vaunted metaphysics of a Fichte, a Schelling, and a Hegel were derived, who identified might with right, and who held that the acts of the criminal and the acts of the righteous man were equally necessary. In short, M. Jouslain is minded to expel Germanism and to honour more highly than now Descartes, Pascal, Malebranche, Condillac, and Taine, “à moins qu’on ne se propose expressément d’apprendre aux élèves à penser à l’allemande et à mal écrire en français.” Now, what of philosophy is taught in French schools is the business of France. As for England, the sins of one generation of Germans do not obliterate in our eyes the achievement of preceding generations, nor can the vigorous German race cease to be productive in the fields of literature and science. We cannot afford to exclude Germanism from our schools and universities. In poetry the German Indigenous Epic of the Middle Ages is as indispensable to the student as the cycle of Homeric poems, and in philosophy to ignore Kant would be to ignore a potent influence in modern thought.

The opposition between France and Germany concerns us only as it touches education. To uphold herself France needs intellectual forces—an abundance of highly trained minds. Her inferiority at present is perilous. In 1920 in her Public Establishments of Higher Education (Strasbourg University included) there were only 45,117 students; in German universities and other *Hochschulen* (Königsberg University excluded) there were 84,506. The Budget de l’Instruction publique this year has been *rogne*, that is to say, “axed.” “La jeunesse déserte les Universités,” cries *La Vie Universitaire* (iii. 4), “c’est la conséquence naturelle d’un régime où les intellectuels sont brimés par ceux qui leur doivent protection.” Here is another significant fact: M. Théophile Homolle, Administrator of the Bibliothèque Nationale, reports that the Department of Printed Books received only 138,715 readers in 1920, as against 226,561 in 1913. A great effort is needed to maintain intellectual productivity in France.

GERMANY.

(i.) In the Prussian Landtag Kultusminister Boelitz deplored lately the financial stress: and at least provisional increase of school fees was not to be avoided.—(ii.) Prof. Kuhlmann argues that in learning to write children should begin with *Lateinschrift* as a basis and pass to *Deutschschrift*.—(iii.) *Elternbünde* (parents’ associations) are being multiplied and are uniting in a *Reichselternbund* (Imperial or Central Parents’ Association).—(iv.) The Senate of the University of Leipzig has issued a grave protest against the sort of economy in education attained by increasing classes and adding to the hours of the teacher.—(v.) Films have been prepared exhibiting folk-stories: “Tischlein deck’ dich,” “Der kleine Muck,” “Die schöne Melusine,” &c.—(vi.) The *Frankfurter Zeitung* contends that the culture of a people is measured, not (as is commonly supposed) by the amount of soap that it uses, but by the way it treats the old: it is barbarous to lay down that judges, officials, and others are all “too old” at sixty-five.—(vii.) Negotiations as to the employment of women teachers after marriage are going on between the Imperial and the several State Governments.

UNITED STATES.

How a picture of movement influences a child depends on the child and the picture, and a whole “literature,” as the Germans say, has grown about the subject. It is a new inquiry how the child engaged in the making of such pictures is affected by his occupation. At Los Angeles, California, the principal seat of their production, some 1,500 children are continually employed in the work. Now the Californian Compulsory Education Law bids every child between the ages of eight and sixteen to attend at school for at least four hours a day. But laws are not always perfect. Just as under Mr. Fisher’s Act it will be possible to escape the continuation school by entering some sort of works’ school, so in California a private tutor may be substituted for the classroom. Such tutors, recommended by the public school authorities, are paid by the picture-producing companies to instruct the little *employés*. Classes are held wherever it happens to be convenient, and even during the hours of study the demands of the screen cause frequent interruptions. Developing themselves under such conditions, the children, it is found, become excitable, improperly mature, and lacking in power of concentration. They are better off than the “eight or nine little children, who did the fairy business

when required” in Mr. Sleary’s Company, portrayed in “Hard Times”; they are victims nevertheless of what has been called “the impersonal attitude of modern business”—the belief of shareholders that they can limit their moral obligations as strictly as their financial liability.

There are some things which they do better in America than in England, and we incline to think that the teaching of English composition is one of them. It is a judgment towards which we are moved by reading Mr. Sterling A. Leonard’s “English Composition as a Social Problem” (Houghton Mifflin Company). Instructor in English at the Horace Mann School, Teachers College, New York, he recommends as the best means of developing the power of expression the social co-operation of a class. So for the old system of correcting essays with abundant red ink he substitutes chiefly class criticism with the help of a blackboard. As the children co-operate in choosing and discussing the subjects to be written upon, and in correcting the papers written, they are led to find interest in common projects of a different sort and to combine in realizing them. The English essay as it is written in English schools is wont to be diffuse, tedious, and unsubstantial. If we cannot ourselves make remedies for these defects, we shall do well to import them. Mr. Leonard’s book contains much that is suggestive for the practical teacher.

INDIA.

Were we writing of politics we could tell of an improved atmosphere. *Haec super arvorum cultu!* To the students of the Agricultural College, Poona, at their last annual meeting a speaker said things which it was wise to say. He drew attention to the old Indian belief that “of all occupations agriculture was the most honourable, commerce stood next, while service, whether of Government or of others, was the least to be desired.” The first education offered by England to India was bookish, and led those who received it to seek employment in public offices or as lawyers. Then trade and industry began to attract the educated; but still agriculture was neglected. When Agricultural Colleges were established in various parts of the country, it was hoped that the neglect would be made good. Alas! the students whom they had trained asked service under Government instead of farming scientifically on their own account. It were well that young India should feel the lure of the land more keenly. India may learn presently, as some European States are learning, that her welfare depends more on the field than on the forum, and that an abundance of legislation is no remedy for a shortage of corn.

PRIMARY SCHOOL NOTES.

The “Economy” of Large Classes.

THE assumption that teachers can as well control sixty as forty children is one that was disproved twenty years ago; and it is so utterly impossible for any human being to cope with classes that are systematically crowded, that physical breakdown cannot fail to follow where such a strain is imposed. The moral responsibility of Education Committees which countenance working conditions of this type is indefensible in view of the ample supply of teachers. In some cases Authorities are dispensing with the services of Supply Teachers, thus ensuring the ultimate exhaustion and collapse of entire school staffs; for it is evident that if all members of a school staff are working under abnormally high pressure, the breakdown of a single teacher will be followed, in the absence of a capable substitute, by an intensified and cumulative strain upon the remaining teachers. And it is significant that Authorities indulging in such economies have not even safeguarded the education of the children committed to their care by providing for frequent rest-intervals for teachers either by redistributing or prolonging the periods devoted to school holidays.

The Success of School Medical Inspection.

ONE of the most inspiring phases of English education has been the fine service rendered by the School Medical Officer, not only in respect of safeguarding the health of the nation’s children but in establishing the conviction that any efficient school course must provide a fair balance between the development of the physical and intellectual powers. Countless lives have been salvaged for the State; all have been advantaged

(Continued on page 370.)

OXFORD BOOKS

The Clarendon Series of English Literature.

Under the General Editorship of D. NICHOL SMITH and A. M. D. HUGHES. Designed to present in single volumes selections from the greatest authors with the best criticism of their work. Other volumes are in preparation. 3s. 6d. net each.

WILLIAM COWPER. Poetry and Prose. With Essays by Hazlitt and Bagehot. With an Introduction by HUMPHREY S. MILFORD.

SELECTIONS FROM KEATS. Poetry and Letters. With Essays, &c., by Shelley, Francis Jeffrey, and others. Edited by HENRY ELLERSHAW.

Previously Published. Burke Selections, Milton Poetry and Prose, Wordsworth Poetry and Prose, Lamb Poetry and Prose.

English Prose. Chosen and arranged by W. PEACOCK. In five volumes. Vol. I.—Wycliffe to Clarendon. Vol. II.—Milton to Gray. Vol. III.—Walpole to Lamb. Vol. IV.—Landor to Holmes. Vol. V.—In preparation. Thin paper, cloth, 2s. 6d. net each; paste grain, 4s. 6d. net each. [World's Classics.]

A New History of Great Britain.

Part III.—From the Treaty of Vienna to the Outbreak of the Great War. By R. B. MOWAT. With over 175 Illustrations. Cloth boards, 4s. 6d. This Part completed the History, which is obtainable complete at 10s. 6d., in three Parts at 4s. 6d. each, and in several Sections to cover periods set at various examinations. Full particulars on application.

The Golden Fleece. An Introduction to the Industrial History of England. By G. W. MORRIS and L. S. WOOD. 3s. 6d. net.

An historical study and account of the woollen industry, written with reference to the industrial history of England. "To study the growth of a trade is to see the development of our national life from a new and more intimate point of view."

Europe: A Regional Geography.

By N. MACMUNN and G. COSTER. With 75 Maps and Figures in the Text. Cloth boards. 4s. 6d. net.

An endeavour has been made to give a sufficiently full account of the regions to be readable, and to supply material for essays and exercises. There are abundant sketch-maps, and climatic figures for each month.

A Geography of the Bible.

By ELEANOR K. HOWARTH. Edited by O. J. R. HOWARTH. With 16 Illustrations and 2 Maps. 2s. net.

The aim of this book is to show something of the world as it was known to the Hebrews during the time covered by Bible history.

The Scope of School Geography.

By R. N. RUDMOSE BROWN, O. J. R. HOWARTH, and J. MACFARLANE. Cloth boards, 5s. 6d. net.

Deals with the teaching of geography in secondary schools.

The Clarendon Series of Greek and Latin Authors.

Partly in the original, partly in translation, to help pupils to understand as much as possible of the book they are reading. 3s. 6d. net each.

AESCHYLUS PERSAE. Edited by M. R. RIDLEY, with Notes, Introduction, and Vocabulary.

HERODOTUS. BOOK VII. Edited by C. E. ROBINSON and others. With a Map, Introduction, Notes, and Vocabulary.

Previously Published. CAESAR'S GALLIC WAR. Books IV (20-38) and V (3s. net), VI and VII, Sallust Jugurthine War, The Catalinarian Conspiracy (from Sallust and Cicero), Aristophanes' Clouds.

Der Onkel Aus Pommern, zwei Humoresken.

By ERNST VON WILDENBRUCH. Edited by KARL WICHMANN. Under the general editorship of A. M. D. HUGHES. 2s. [Oxford Junior German Series. Other recent volumes in the Series are Schiller's DER GEISTERSEHER, ROLAND UND BEOWULF, and SIEGFRIED.]

Jules Verne, De la Terre à la Lune.

Edited by J. B. PATTERSON. 1s. [Oxford French Plain Text.]

Junior Botany. By T. W. WOODHEAD. With 140 Illustrations and Diagrams in the Text. Cloth boards, 3s. 6d. net.

Times Educational Supplement.—"A more attractive introduction to plant-life can scarcely be imagined than is afforded by this abridged and simplified edition of the same author's 'Study of Plants.'"

The Young Industrial Worker.

A Study of his Educational Needs. By M. PHILLIPS. 4s. 6d. net.

"A welcome is due, I think, to such a work as the present volume, because enlightenment is needed, not only as to the special characteristics of adolescence in the young wage-earner, but as to the ways in which the Continuation School may deal with them—or, better still, in which it actually has dealt with them. In reading Miss Phillips's book one feels in touch with such reality."—From Professor C. W. Valentine's Preface.

The Beginner's Guide to Harmony.

Being an attempt at the simplest possible introduction to the subject, based entirely upon Ear Training. By PERCY A. SCHOLLES. Crown 8vo. Paper covers, 2s. net; Cloth, 2s. 6d. net.

School Atlas. Physical and Political.

By J. G. BARTHOLOMEW. A new edition of this Atlas will be published shortly, at 2s. 6d.

OXFORD UNIVERSITY PRESS

HUMPHREY MILFORD

LONDON, E.C. 4

by timely advice and subsequent remedial treatment. It is in some respects regrettable that the results of the valuable work done are not more widely known by those who are readiest to assume that Education is synonymous with extravagance. Under any circumstances the loss of half-a-million of the nation's manhood would gravely imperil its well-being. But the privations of the war have made large inroads upon the vitality of the men, women, and children who have survived. A new generation of children is now entering the schools, and one which is characterized by a keenly nervous temperament and a generally delicate type of physique. It is therefore of primary importance that school medical inspection should be available at the earliest possible stage; and that the expenditure upon this branch of the educational service should be maintained at the fullest standards of efficiency. Every teacher knows what prolific life-savers are the open-air school and the school clinic; the pity is that Education Authorities are so intent upon cutting down the cost of printing reports that they are too poor to announce to the community, in summary form, the magnificent national work which is being done by the school doctors and nurses.

* * * * *

The Revival of School Examinations.

THE tendency to introduce examinations which has, during recent years, been so marked in English Secondary Education, appears to be enmeshing the Primary School organization of certain Local Education Authorities. In some cases the pretext is made that a standard of attainment is necessary in order to gauge the scholastic capacity of pupils of varying ages. In one particular district all pupils of eleven years of age are required to undergo a test at the hands of H.M. Inspectors and the local committee. Every term the whole of the pupils are examined individually by the head master for the ordinary purposes of classification. In addition, the most promising scholars take the examinations for junior scholarships and bursaries, while those who wish to enter the neighbouring Secondary School must take the ordinary entrance test. Upon recent occasions H.M. Inspectors have also examined the children individually when they have visited. This school is admittedly efficient in every respect, and the head master is in responsible charge of a large class. It is surely obvious that his class will

suffer when other divisions are under examination, and that these constant upheavals of school work cannot fail to have a disturbing influence upon the normal progress of the scholars.

* * * * *

A Refuge of Incompetence.

THE opinion has been expressed that the resort to examinations is inspired by the anxiety of the Board of Education to raise the mechanical standards of school efficiency to pre-war levels. Such an attitude would imply a complete forgetfulness of the disastrous results accomplished by the wretched system of "payment by results," when the cast-iron examination system of the Board of Education produced a type of teacher unworthy of the profession—the callous Gradgrind who crushed every natural instinct of child life in order to secure one hundred per cent of passes. Those who have the widest sympathy and acquaintance with young children and their education will realize how painfully easy it is for an utterly incompetent teacher to secure a reputation for competence merely by cramming pupils for an examination.

The war has left a new and sad world behind it; the problem of child life promises for the immediate future at all events to be one of safeguarding its physical rather than its intellectual attributes; and salvation appears to lie with School Medical Officers and "days of fresh air in the rain and the sun." At the best, examinations are a poor restorative for languishing children.

HOLIDAY RESORTS.—The Education Guild of Great Britain and Ireland has published the thirty-seventh annual issue of its valuable pamphlet, "Holiday Resorts and Recommended Addresses." The title is explanatory of the booklet, though it is well to remember that the information is not confined to this country. Particulars are generally given of the accommodation offered and the charges at places in the British Isles and the nearer Continental countries, while for resorts which are further abroad, in Australasia, Fiji, Japan, Canada, the United States, and South Africa, a list of recommended hotels is provided. The booklet can be obtained from the offices of the Guild, 9 Brunswick Square, London, W.C. 1; price to members 1s., to non-members 2s.

Contemporary Review says: "Will constitute not only one of the most valuable works of literary reference existing, but an anthology of the choicest passages in English literature from Chaucer to the present day."

CHAMBERS'S CYCLOPÆDIA OF ENGLISH LITERATURE

Edited by DAVID PATRICK, LL.D.

A History Critical and Biographical of Authors in the English Tongue from the Earliest Times to the Present Day, with Specimens of their Writings.

ILLUSTRATED WITH 300 PORTRAITS AND FAC-SIMILES.

HOW TO STUDY ENGLISH LITERATURE

Extract from Mr. JAMES DOUGLAS'S Letter, in a popular Literary Weekly:

"I promised to show you a short way through the labyrinth of literature. It would be easy to compile a long list of books which you ought to read, but I take it that you do not wish me to hurl a library at your head. This is the age of time-saving and labour-saving devices. . . . How, then, can you enjoy the results of criticism? Well, there is a work which I commend to you as a complete solution of the problem that vexes you. It is the new edition of CHAMBERS'S CYCLOPÆDIA OF ENGLISH LITERATURE.

"Do not go straight through the CYCLOPÆDIA. Use it as a companion in your reading, turning to the admirable index for light on any author or any book to which your attention may be directed. Dip into it in your leisure hours, and take from it hints for your general reading, going perpetually from its quotations to the fountain head of the author. Before long you will find your way through the maze of literature, and you will begin to see the tendency of your own taste. You will be saved from barren journeyings and futile wanderings, for you will be guided by the shortest way to the best writers and the best books."

W. & R. CHAMBERS, Ltd., 339 High Street, Edinburgh, and 38 Soho Square, London, W. 1.

Student Christian Movement

SUGGESTIONS FOR A SYLLABUS IN RELIGIOUS TEACHING. By G. B. AYRE. New edition revised and enlarged. Crown 8vo. 4s. net.

A seven years' course of religious instruction for children, intended primarily for use in day schools, though valuable also to Sunday School teachers and parents. The first edition of this book attracted widespread attention, and is recognized by authorities as one of the outstanding books on this subject. The new edition has been thoroughly revised and greatly enlarged and might almost be described as a new book.

Second Edition ready.

THE MEANING OF THE OLD TESTAMENT. By HUGH MARTIN, M.A. Crown 8vo, cloth, 3s. 6d. net; Paper, 2s. 6d. net.

A guide to the main results of modern scholarship.

"Positive in statement, without being provocative, sparing in detail without being superficial, reverent in tone without surrender to mere tradition, it presents a constructive interpretation of the Old Testament that conserves every spiritual value and solves many a problem for the Bible Student."—*United Methodist*.

SOME CHRISTIAN IDEALS IN THE TEACHING PROFESSION. By Miss A. S. PAUL, late Head Mistress of Clapham High School. Crown 8vo. 3s. net.

"All who believe that education is best interpreted in the light of ideals will read this book; those who think otherwise must be persuaded to do so."—*Education*.

Fourth Impression in the Press.

PSYCHOLOGY AND THE CHRISTIAN LIFE. By T. W. PYM, D.S.O., M.A., Head of Cambridge House. Crown 8vo, 4s. net; Paper, 2s. 6d. net.

"Contains the best discussion of the religious bearings of the new psychology which has yet appeared."—*Westminster Gazette*.

MASON'S SCRIPTURE MANUALS.

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local, the Pupil Teachers', and Diocesan Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. After each question, the answer is either given in full, or the number of the verse or verses in which it occurs.

The following Manuals are already published:—

	s.	d.
The Four Gospels	each	0 9
The Acts of the Apostles	1	6
Genesis and Exodus	1	6
Joshua and Judges	1	0
Samuel I.	0	9
Samuel II.	0	9
Kings I.	0	9
Kings II.	0	9
Jeremiah	0	9
Ezra, Nehemiah, Esther, and Haggai	0	9
Corinthians II.	0	9
The Church Catechism	0	9
Morning and Evening Services and Litany	1	6

A Catechism on the Ten Commandments, with one hundred Practical Questions specially adapted for Children of all Religious Denominations in Elementary Schools. Price 4d.

Euclid (Book I.) made easy for Young Beginners. Price 1s.

JAMES GALT & CO., MANCHESTER.
SIMPKIN, MARSHALL, & CO., LONDON.

A. & C. BLACK'S LIST HISTORY.

The following textbooks cover the syllabuses for *Matriculation*, *Senior Locals*, and other examinations of a *School Certificate* standard.

A HISTORY OF ENGLAND FOR SCHOOLS.

By M. W. KEATINGE, M.A., D.Sc., and N. L. FRAZER, M.A. Price 7s. 6d. Or in 2 vols. Price 4s. each.

A succinct account covering the whole of English History, and illustrated by a collection of documents illustrative of all the more important events. Social progress and the growth of the British Empire receive special attention. The book contains a large number of problems and exercises based on the documents.

DOCUMENTS OF BRITISH HISTORY.

By M. W. KEATINGE, M.A., D.Sc., and N. L. FRAZER, M.A. A.D. 78-1900. Price 7s. 6d. Or in 6 separate parts. Price 1s. 6d. each.

Section I, A.D. 78-1216. Section IV, 1603-1715.
" II, 1216-1399. " V, 1715-1815.
" III, 1399-1603. " VI, 1815-1900.

These documents are provided with numerous problems and exercises, and, with the exception of Section VI, have been reprinted from "A History of England for Schools."

ENGLISH HISTORY ILLUSTRATED FROM ORIGINAL SOURCES.

Price 3s. 6d. each

From Earliest Times to 1399-1485. F. H. DURHAM.
A.D. 1066. Miss S. MELHUISH, 1485-1603. N. L. FRAZER, M.A.
M.A. 1603-1660. F. J. WEAVER.
1066-1216. N. L. FRAZER, M.A. 1660-1715. Rev. J. N. FICGIS.
1216-1307. N. L. FRAZER, M.A. Litt.D.
1307-1399. N. L. FRAZER, M.A. 1715-1815. H. E. N. ICELEY, M.A.

Another series of contemporary documents designed to vivify the ordinary textbook or to supply the teacher with material for the history lesson. Each volume contains pictures, a bibliography, and a date summary.

AN INTRODUCTION TO WORLD HISTORY.

By M. W. KEATINGE, M.A., D.Sc., and N. L. FRAZER, M.A. Price 4s. 6d.

A suitable textbook for candidates offering "General History." This volume provides a corrective to the study of history in "prescribed periods." It gives a continuous narrative into which the subjects which are studied intensively can be fitted, and by means of which interest will be aroused, and a conception of the unity of history imparted. The book contains maps, illustrations, and a short bibliography. It is up to date, and includes the Great War.

AN INTRODUCTION TO THE HISTORY OF ENGLAND.

By EUGÈNE L. HASLUCK, B.A., F.R.Hist.S. Price 3s. 6d.

This book is not a mere compendium of facts, although no event of cardinal importance has been omitted, but it deals with the chief aspects of English history more effectively than is possible in the usual type of textbook. It will provide the necessary background for the ordinary class lesson.

A SUMMARY OF ENGLISH HISTORY.

By N. L. FRAZER, M.A. Price 3s. 6d.

A carefully selected summary of principles and facts necessary to an intelligent understanding of English History. The outline can be supplemented either by the teacher himself or by the use of selected documents. The book includes illustrations, portraits, maps, genealogical tables, notes on special topics, biographies, and a glossary of historical terms.

The following books, recently published, are also suitable for reference and general reading by candidates for these examinations.

A SHORT SKETCH OF EUROPEAN HISTORY.

By H. E. MARSHALL. Price 5s.

THE MAKING OF EUROPE.

By W. H. BARKER and W. REES. Price 6s.

THE EXPANSION OF THE ANGLO-SAXON NATIONS.

Edited by H. CLIVE BARNARD, M.A., B.Litt. Price 7s. 6d. net.

This volume includes contributions by leading writers in each of the Dominions, in India, and in the United States. It therefore gives an especially valuable side-light upon Imperial History.

SCIENCE

Elementary Experimental Science (Physics and Chemistry). By W. T. CLOUGH, A.R.C.Sc., and A. E. DUNSTAN, D.Sc., F.I.C. With Diagrams, Examples, Examination Papers, and Answers. 4s.

Practical Science for Girls as applied to Domestic Subjects. By EVELYN E. JARDINE, M.A., B.Sc., County Secondary School, Runcorn. With Diagrams and Exercises. 3s.

First Year Physics. By C. E. JACKSON, M.A., formerly Senior Physics Master, Bradford Grammar School. With Answers. 3s.

Examples in Physics. By C. E. JACKSON. With Answers. 5s. Contains over 1,000 examples in Mensuration, Mechanics, Hydrostatics, Heat, Light, Sound, Magnetism, and Electricity.

Elementary Experimental Chemistry. By A. E. DUNSTAN, D.Sc., F.I.C. With Diagrams and Examination Papers. 3s.

A Senior Experimental Chemistry. By A. E. DUNSTAN and F. B. THOLE, D.Sc. With Diagrams and Appendices. 7s. 6d.

A Junior Chemistry. By E. A. TYLER, M.A., F.I.C., Swansea Technical College. With Diagrams, Problems, and Answers. 4s.

The Complete School Chemistry. By F. M. OLDHAM, M.A., Senior Chemistry Master, Dulwich College, London. With Diagrams, Questions, and Answers. 7s. 6d.

In use in many schools in London, Edinburgh, Glasgow, Liverpool, Birmingham, Leeds, Bradford, York, Newcastle, Nottingham, Leicester, Oxford, Cambridge, Brighton, Bath, Cardiff, Swansea, Londonderry, &c., as also in South Africa, India, Australia, and New Zealand.

A Textbook of Inorganic Chemistry. By GEORGE SENTER, D.Sc., Ph.D., F.I.C., Principal, Birkbeck Institute, London. With Diagrams, Problems, and Answers. 8s. 6d.

In use at Aberdeen, Birmingham, and Otago (N.Z.) Universities, at Imperial College and University College, London, &c.

Outlines of Physical Chemistry. By GEORGE SENTER, D.Sc. With Diagrams, Problems, and Questions. 7s. 6d.

Physico-Chemical Calculations. By JOSEPH KNOX, D.Sc., Lecturer in Chemistry, University of Glasgow. With 365 Problems, Answers, and (in many cases) full Solutions. 4s. 6d.

A First Year Course of Organic Chemistry. By A. E. DUNSTAN, D.Sc. 4s.

Higher Mathematics for Chemical Students. By Professor J. R. PARTINGTON, D.Sc., M.B.E. With 44 Diagrams. 6s.

Elementary Lessons on Plant Life. By D. G. SCOTT, M.Sc., University of Liverpool. With Illustrations and Diagrams. 4s. 6d.

British Plants : Their Biology and Ecology. By J. F. BEVIS, B.A., B.Sc., and H. J. JEFFERY, A.R.C.Sc., F.L.S. With 115 Illustrations and a full Bibliography. 7s. 6d.

A Textbook of Plant Biology. By Professor W. NEILSON JONES, M.A., F.L.S., and M. C. RAYNER, D.Sc. With 42 Plates and Diagrams. 7s.

Simple Lessons on the Weather. By E. STENHOUSE, B.Sc., A.R.C.Sc. With 74 Plates and Illustrations. 4s.

Meteorology. By R. G. K. LEMPERT, M.A., C.B.E., Assistant Director of the Meteorological Office. With 48 Plates and Diagrams. 7s. 6d. net.

The Scientific Study of Scenery. By Professor J. E. MARR, D.Sc., F.R.S., Cambridge University. With 67 Plates and Diagrams. 7s. 6d.

A Textbook of Hygiene for Training Colleges. By MARGARET AVERY, B.Sc., M.R.San.L., Vice-Principal of Warrington Training College. With 100 Illustrations. 7s. 6d.

The Modern Teacher : Essayson Educational Aims and Methods. Edited by A. WATSON BAIN, M.A. With an Introduction by Sir W. HENRY HADOW, M.A., D.Mus., C.B.E. 10s. 6d. net.

Contents : English Literature—English Composition—Modern Languages—Classics—Mathematics—Science—Geography—History—Citizenship—Religion and Morals.

METHUEN & CO., LTD., 36 Essex Street, LONDON, W.C. 2

TOPICS AND EVENTS.

BOARD OF EDUCATION LISTS OF SUMMER SCHOOLS.—The Board of Education has published a seasonable list of fifty-five Holiday Courses (H.M.S.O., 6d.) to be held during the summer months. There are a number of general courses for teachers, and in addition special courses in the following subjects: biology, the Dalton plan, the drama, economics, eurhythmics, eurhythmy, folk dancing, geography and geology, hand-work, international relations, languages, librarianship, the Montessori method, physical training, psychology, religious teaching, social service, speech training, and the teaching of mentally defective children. A further list of twenty-eight holiday courses in modern languages has also been issued (H.M.S.O., 2d.). Four of these courses are in Switzerland, at Basel, Geneva, Lausanne, and Neuchâtel; two in Spain, at Madrid and Santander; three in London; one in Oxford; one in Liverpool; two in Italy, at Florence and Siena; and the remainder in France, at Bagnères-de-Bigorre, Besançon, Boulogne, Dijon, Grenoble, Caen, Lisieux, Nancy, Paris, Saint-Malo, Strasbourg, and Tours. The dates of each course, the fees, the cost of boarding, the principal subjects of instruction, and the address of the local secretary are given for every entry in each of these lists.

INTERNATIONAL ESPERANTO CONFERENCE OF TEACHERS.—A conference was held at Geneva on April 18—20 last, when teachers of twenty-eight different nationalities took part and sixteen Governments were represented. Sir Eric Drummond, Secretary-General to the League of Nations, in welcoming the delegates, laid stress on the common aims of Esperanto and the League of Nations. The delegates presented numerous short accounts of the experiments conducted in their own countries, which brought out a remarkable agreement concerning the value of Esperanto as a help to the study of the mother tongue both spoken and written; as an introduction to the study of foreign and classical tongues; as a training in logic; and as a help to the study of grammar. At a meeting organized by the Anglo-Geneva Association, reports were presented in English on the

value of Esperanto as a school subject, Prof. Collinson, of Liverpool University, viewing the subject as a philologist, Miss A. Fisher, Head Mistress of the County Girls' School, Bishop Auckland, viewing it as a basis for the teaching of modern languages, and Mr. Young, Head Master of a Scottish elementary school, viewing it as the poor man's Latin, as a means of giving to millions of children a wider view of life, an aid to travel, and an understanding of their fellow beings in other lands. Another point worthy of note was the cumulative evidence to prove that the addition of Esperanto to the timetable has not had the effect of adding another burden to the already over-full curriculum. On the contrary, more could be attained in less time in the teaching of other subjects, especially in English, foreign languages, and geography, which are directly helped by Esperanto.

SIR RICHARD GREGORY has accepted the position of President of the Decimal Association in succession to the late Lord Belhaven and Stenton.

VACATION COURSES IN PHONETICS.—University College, Gower Street, London, W.C. 1, is organizing three vacation courses in phonetics to be held on August 1-15. There will be a series of lectures on English phonetics, with ear-training and practical classes, for teachers of English, and another concurrent series for teachers of French, the work occupying the mornings only in each course. An additional course on similar lines is being offered for foreigners in spoken English. Application for admission to these courses must reach the Secretary of University College not later than June 1.

VACATION COURSE IN CLASSICS.—The summer school of Latin conducted by the Association for the Reform of Latin Teaching will be held at Durham, in the Bede Training College, on August 2-12. There will be demonstration classes, reading in both Latin and Greek, lectures and discussions, and arrangements are being made for excursions to local Roman camps and similar places. The Hon. Secretary, Mr. N. O. Parry, 4 Church Street, Durham, will give full information and answer any inquiries.

(Continued on page 378.)

Now Ready. Third Edition. Size 11 x 7½ inches. Pp. viii + 186. With 50 Plates showing 138 Figures and 94 other Illustrations in the Text. Price 10s. 6d. net. Postage 10d.

MANUAL OF ARTISTIC ANATOMY

Being a Description of the Bones and Muscles that influence the External Forms of Man. By J. C. L. SPARKES, late Principal Royal College of Art, South Kensington. Revised and with Additional Text and Illustrations by WILLIAM H. GATES, A.R.C.A. (Lond.), Head Master of the School of Science and Art, Coalbrookdale, Shropshire; Ex-National Scholar; Gold Medallist of the Royal College of Art, London.

Uniform with above. Size 7½ x 9½ inches. Pp. xii + 100, with 23 Plates containing 320 Figures. Stiff boards. Price 7s. 6d. net. Postage 10d.

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W. 1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

VACATION COURSE AT OXFORD.—A preliminary notice has been issued of a four weeks' course organized by the Oxford University Department for the Training of Teachers on the aims, methods, and principles in education. The course commences on August 1, and in addition to the general subject of education, there will be special courses in history, English, and natural science during the first fortnight, and in mathematics, geography, French, and the classics during the concluding weeks. The director of the course, to whom inquiries should be addressed, is Dr. M. W. Keatinge, 15 Norham Gardens, Oxford.

INTERNATIONAL MORAL EDUCATION CONGRESS.—An enterprise which, in the autumn of 1919, seemed, as a result of the War, to be on the point of collapse, has now been triumphantly revived, and the Third International Moral Education Congress (which ought to have been held in Paris, 1916) will take place at Geneva on July 28 to August 1, 1922. Delegates of many nationalities will discuss two main themes: (1) the international spirit, with special reference to history teaching, and (2) solidarity and practical social service. Between thirty and forty papers will be presented (not read), and some of the writers and topics may be named: Mrs. Wintringham, M.P., "The Motive of Service"; Sir R. Baden-Powell, "Education in Love in Place of Fear"; Mr. G. P. Gooch, "Advanced Historical Teaching"; Mr. Clouesley Breton, "The Teaching and Problems of History in English Secondary Schools"; Mr. F. J. Gould, "History Teaching as an Educational Aid towards the League of Humanity"; Mr. A. Yusuf Ali, "History Teaching in India." In the United States the Dean of the University of Columbia has arranged five contributions from Dr. John L. Elliott (New York Ethical Society), Mr. Rowland Haynes, of Cleveland, O., Mr. H. N. MacCracken (President of Vassar College, Poughkeepsie, N.Y.), Mr. Angelo Patri, and Prof. Frank C. Sharp (of the University of Wisconsin). The list of Continental essayists is not yet complete; it includes French, German, Swedish, Dutch, Polish, and Czech-Slavic writers. More than twenty National Committees support the Congress; they are not so much business bodies, as enrolments of sympathisers. Some eighty names, representing many schools of thought, figure in the British list. Other groups have been enlisted in Canada, South Africa, India, and New Zealand, and names are awaited

from Australia. The papers will all be printed in French, and issued in two volumes, one in June, the other in July, to be distributed free, or sold at a low price, to Congress ticket-holders. (Tickets are to be had, for 20 Swiss francs, from Secrétariat du III Congrès d'Education Morale, Institut Rousseau, Tacconnerie 5, Geneva.) On the opening day, July 28, addresses will be delivered by Dr. Ferrière, author of "La Loi du Progrès"; Sir Frederick Pollock, who since 1914 has been chairman of the International Executive Council, meeting in London; and F.W. Foerster, Professor at the University of Zurich, and author of "Jugendlehre." Prof. Foerster will speak on "The Value of History in Moral and Social Education, treated from the View-points of Humanity and the Supra-National Spirit."

PRIZE COMPETITIONS.

The prize for the May Competition is awarded to "Philosoph," and the second place to "Emile."

The winner of the April Competition was Mr. Robert Ainsworth, 63 Park Road, Darwen, Lancs.

EXTRACT FROM KANT'S "KRITIK DER PRAKTISCHEN VERNUNFT."
BY "PHILOSOPH."

There are two things that fill my soul with an ever new and ever increasing awe and reverence, the oftener and more steadfastly I contemplate them, namely, the starry heaven above me and the moral law within me. Neither of them can I regard as veiled mysteries that I must seek out, merely inferring their existence in the dim or transcendental world outside my horizon; on the contrary, they lie before my eyes and I can connect them directly with the consciousness of my own existence. The first, starting from the position which I occupy in the external world, extends my connexion with it into immeasurable depths of worlds beyond worlds and systems beyond systems, aye, and into the limitless ages in which they have their periodic movements, into their beginnings and their continuance. The second, starting from my invisible self, my personality, sets me in a world of true infinity though perceptible only to the understanding, with which I recognize

THE SPIRIT OF OUR LAWS.

By HERMAN COHEN, of the Inner Temple, Barrister-at-Law. Second Edition. Revised to date. Crown 8vo, cloth.

Price 8s. net, postage 8d.

This book is designed to make the passage easy and pleasant from literature and philosophy to law. Thus the sixth form boy, the undergraduate, the new J.P., and the general reader may each find his account in it. It does not aim at teaching law, but at making explicit the many *understandings* which are assumed by text-books, newspapers, &c., but are not generally to be found in books. In short, it is meant to be a popular introduction to the serious study of the laws of England.

In this edition the book has been thoroughly revised and brought right up-to-date.

JUST PUBLISHED.

BOOK-KEEPING NOTES FOR CAMBRIDGE SENIOR LOCAL, WITH EXAMINATION PAPERS AND ONE FULLY WORKED KEY.

By H. LOGAN RAMSEY, B.A. (Cantab.). Assistant Master, Cambridge and County School for Boys. Demy 8vo, sewed.

Price 1s. 6d., postage 2d.

This little book is intended primarily for students who are preparing for the examination in Book-keeping as set by the Cambridge Senior Local Authorities. The student who works through the whole of the papers should have no difficulty in passing the examination.

NOTES ON GEOLOGICAL MAP-READING.

By ALFRED HARKER, LL.D., F.R.S., F.G.S., Fellow of St. John's College and Reader in Petrology in the University of Cambridge. With 40 illustrations. Demy 8vo, sewed, 3s. 6d. net, postage 6d.

"... This volume is an excellent guide to reading them (Geological Survey Maps) and will be invaluable to Schools which do local regional work, as all schools should."—Extract from *Educational Times*.

A SCHOOL STATICS.

By G. W. BREWSTER, M.A., Senior Mathematical Master, Oundle School, and C. J. L. WAGSTAFF, M.A., Head Master King Edward VII School, King's Lynn. Demy 8vo, cloth, 4s. 6d. net, postage 6d.

"We recommend the book to all types of students."—*London Teacher*.

ORIGINAL SOURCES OF ENGLISH HISTORY.

By L. F. SALZMAN, M.A., F.S.A., Author of "Mediæval Byways," &c. Crown 8vo, cloth. 3s. net, postage 4d.

"... Freshness, clearness, aptness in illustration, some care as to proportion, and good judgment as to inevitable omissions are the principal qualities—besides the requisite knowledge—on which the success of such a book as this will depend. They are present here, and make these pages excellent reading even for one to whom the matters dealt with are familiar. Much more should they prove so to readers who are as yet unacquainted with the subject. . . ."—*Notes and Queries*.

PLAYS.

SCENES FROM THE LIFE OF LONG AGO.

Five Historical plays for Senior Forms in Schools. By I. M. GAMBLE and K. E. MARIS. Crown 8vo. 2s. 6d. net, postage 4d.

These plays deal with the early period of British History from the Bronze Age to the Norman Conquest.

SIX PLAYS.

By FLORENCE HENRIETTA DARWIN. Art Paper Covers, 1s. 6d. each (postage 3d.). THE LOVER'S TASKS; BUSHES AND BRIARS; MY MAN JOHN; PRINCESS ROYAL AND THE SEEDS OF LOVE; THE NEW YEAR. Complete in one volume, with an Introduction by CECIL SHARP. Crown 8vo, cloth. 9s. net, postage 8d.

These six Plays are all concerned with the life of country people, and they are in some slight degree based on the Folk Songs of England. They are not written in dialect, but show a very deep understanding of the thoughts of country people and the speech whereby they express themselves. They are simple in plot as they are simple and beautiful in words; and they have already been acted by village players of many counties.

TWO PLAYS FROM THE PERSE SCHOOL.

Edited by F. C. HAPPOLD, D.S.O. Demy 8vo, boards. 3s. 6d. net, postage 4d.

"Here is an interesting experiment, which might well be attempted in other Public schools."—*Morning Post*.

PLAYS OF UNRIVALLED EXCELLENCE FOR BOYS.

JUST PUBLISHED.

ENGLISH INTONATION.

With Systematic Exercises. By HAROLD E. PALMER. Linguistic Advisor to the Japanese Department of Education, Late Lecturer in Spoken English, University College, London. Foolscap 4to, cloth. Price 5s. net, postage 6d.

This book is an original and brilliant piece of research work on the nature and uses of English Tones.

Its object is to explain to foreign students what the English system of Intonation is and how to use it; and to provide teachers of English and of English phonetics with a simple handbook with graduated exercises so that they may teach foreign students how to intone English sentences.

BY THE SAME AUTHOR.

THE ORAL METHOD OF TEACHING LANGUAGES.

Crown 8vo, cloth. Price 5s., postage 4d.

A Monograph on Conversational methods, together with a full description and Abundant Examples of Fifty Appropriate Forms of Work.

This book is intended to explain why the Oral method is the way of success, and states the three purposes, elementary, corrective, and advanced, for which Oral teaching may be used, and the different ways in which it should be applied in the cases of school children and adult students.

BY THE SAME AUTHOR.

A FIRST COURSE OF ENGLISH PHONETICS.

Crown 8vo, cloth. 3s. 6d. net, postage 4d.

The book includes an explanation of the scope of the science of phonetics, the theory of sounds, a catalogue of English sounds, and a number of articulation, pronunciation, and transcription exercises.

HOW TO TEACH FRENCH PHONETICS.

(Lessons, Exercises, and Drills for Class Use.) By G. C. BATEMAN, Diplôme d'Études Supérieures, Docteur de l'Université de Caen; and J. E. THORNTON, M.A. (Oxon), Senior Modern Languages Master, Leeds Boys' Modern School. Crown 8vo, duodecim. Price 3s. 6d. net, postage 3d.

SOUND DRILLS FOR FRENCH PHONETICS.

A Pupil's book, containing Vowel and Consonant Charts, Diagrams, Chart and Lip Exercises, Sound Drills, Hints for Pupils, Blank pages for Notes. Crown 8vo, 6d., postage 2d.

PHONETICS WITHOUT SYMBOLS.

(Teacher's Book.) French Phonetics for Schools. By G. C. BATEMAN, Diplôme d'Études Supérieures, Docteur de l'Université de Caen. Crown 8vo, sewed. Price 1s., postage 2d.

(Pupil's Book.) Crown 8vo, sewed. Price 1s., postage 2d.

GENERAL PHONETICS FOR MISSIONARIES AND STUDENTS OF LANGUAGES.

By G. NOEL-ARMFIELD. New Edition, revised. Crown 8vo, cloth. 5s. net, postage 6d.

"The book can be highly recommended as a sound contribution to Phonetics."—*Modern Language Teaching*.

A Full List of Heffer's Phonetic Publications may be had on application.

THE BIBLICAL HISTORY OF THE HEBREWS.

By F. J. FOAKES-JACKSON, D.D., Professor of Christian Institutions, Union Theological Seminary, New York. New Edition (Fourth) with Maps, crown 8vo, cloth, 10s. net, postage 1s.

For this new edition the notes have been revised and an entirely new chapter dealing with the time between the Testaments has been added.

The book is now complete from the Earliest Times up to the period commencing with the New Testament.

BY THE SAME AUTHOR.

BIBLICAL HISTORY FOR JUNIOR FORMS (OLD TESTAMENT).

Crown 8vo, cloth. 4s. net, postage 6d.

BIBLICAL HISTORY FOR SCHOOLS (NEW TESTAMENT).

Cambridge: W. HEFFER & SONS, Ltd.,

London: SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LTD., and from all Booksellers.

my connexion—and thereby at the same time also with all those visible worlds—only in this case a universal and necessary connexion, not as in the other an accidental one. The former spectacle of myriads of worlds seems to annihilate my importance as one of the animal creation, destined to give back to the planet—itself a mere point in the universe—the matter from which it was formed, after being endowed for a short time—one knows not how—with the gift of life. The latter on the contrary raises my value infinitely, as an intelligence, through my personality, in which the moral law reveals to me a life independent of my animal nature and even of the whole material world, at any rate so far as may be concluded from the purpose of my being as determined by this law, which is not confined to the conditions and limitations of this life but is continued into the Infinite beyond.

We did not expect that a large number of translators would grapple with Kant; indeed the setting of the extract was rather by way of an experiment. The technical terms present difficulties, and the last sentence is involved. But to translate an extract is to get its spirit into our bones, and to get the spirit of this passage into one's bones is worth a big effort and the risk of slight mistakes. For the extract belongs to what is greatest in all literature, ancient or modern; it stands on one of the highest peaks which the human spirit has ever reached. Sir William Hamilton, it may be remembered, quoted it in his lectures on Metaphysics as an illustration of the sublime in literature. Viewed from a purely literary standpoint, it has that solidity and granitic strength which is characteristic of the best German prose. "Philosoph" has produced an excellent translation in which there is little that requires criticism. *Lebenskraft* should be "power of life" or "vitality"; "endowed with the gift of life" is tautological. "They lie before my eyes" is perhaps weak for "*ich sehe sie vor mir*"; say rather "I see them straight before me, or in front of me."

We classify the 31 versions received as follows:—

Class I.—(a) Philosoph, Emile, Penguin, J. S., Gladiator.

(b) Gobelins, Jema, Hale, A. R. F., Chauve-souris, Swallow, Tangenichts, Studiosus, Owl.

Class II.—Esse quam videri, Chingleput, Fitzalan, Back Number, Taratantara, Iva, Hilde, H. E. F.

Class III.—Struwelpeter, Bobs, V. D. C., Winona, T. C. J., Vorwärts, E. M. G., Lenore, Torelore.

A Prize of Two Guineas is offered for the best translation of the following extract from "Batailles de Terre et de Mer" by Comte E. Bouët-Willaumez.

COMBAT DU 12 AVRIL AUX ANTILLES.

C'est le 12 Avril, 1782, que les deux flottes se rencontrent par une brise variable de l'est au sud-sud-est; la flotte française court bâbord amures, mais mal formée, et présente des lacunes dans sa ligne; la flotte anglaise l'atteint par sous le vent, à contre-bord, et son avant-garde prolonge les vaisseaux français à distance; mais au moment où le vaisseau *le Formidable*, monté par Rodney, atteint la flotte française pour la prolonger à son tour comme a fait l'avant-garde anglaise, le vent fraîchit un peu et adonne de deux quarts: "Serrez le vent" dit le capitaine Douglas, *flag-captain* de Rodney, au master qui tenait la barre du gouvernail: Rodney veut d'abord contraindre cet ordre; mais reconnaissant ensuite qu'il va lui permettre de couper la ligne française et de la mettre en désordre, peut-être même entre deux feux, il s'écrie, au dire de l'historien anglais Ekins: "*Then do as you please!*" Faites donc comme il vous plaira! et cependant, dans ce hasard du vent, dans ces trois mots du capitaine Douglas, mots incompris d'abord de Rodney, il y avait tout un nouveau système de combats de mer; bientôt, en effet, les vaisseaux anglais *le Formidable*, *l'Agamemnon*, *le Duke* etc coupent la ligne française, et se répondent, les uns au large, les autres le long des vaisseaux français, qu'ils mettent entre deux feux; le contre-amiral commandant l'arrière-garde anglaise, imitant la manœuvre de Rodney, vient, toujours à contre-bord, couper de nouveau notre ligne après le dernier vaisseau de notre avant-garde: en vain de Grasse multiplie ses signaux pour masser au combat sa ligne désemparée et coupée en trois tronçons; il est trop tard, *la fumée empêche de voir les signaux*, argument qui semble spécieux, mais qui est vrai et qui à lui seul suffit pour faire établir comme règle "que l'amiral en chef doit, autant que possible, prévoir, avant le combat, la manœuvre à faire; et qu'une fois le feu

(Continued on page 382.)

SCHOOL COURSES AND READERS

IN

FRENCH

PUBLISHED AT THE
University Tutorial Press.

The Matriculation French Course. By ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. *Fourth Edition.* 5s.

Exercises and continuous passages for translation into French such as are now set at Matriculation are provided, and all necessary help in vocabulary and construction is given in an alphabetical lexicon.

"The rules are well expressed, the exercises appropriate, the matter accurate and well arranged."—*Guardian*.

Senior French Course. By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 5s.

The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A model of clearness and simplicity."—*The Journal of Education*.

New Junior French Course. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 4s.

A year's Course in Reading, Grammar, and Translation into French, with material for oral practice.

Preliminary French Course. By H. J. CHAYTOR, M.A., Fellow of St. Catherine's College, Cambridge, late Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. *Second Edition.* 2s. 6d.

A beginner's Course leading up to the *New Junior French Course*. Contains grammar and translation from and into French, with provision for oral work.

"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the direct method."—*Athenaeum*.

School Certificate Practice in French. By H. J. CHAYTOR, M.A. 2s.

Contains material in unseen, set composition, and free composition for a weekly test of the work of forms preparing for School Certificate examinations.

Matriculation French Essays. By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A., late Examiner in French at the University of London. 2s. 3d.

A carefully graduated course in Free Composition in French suitable for examinations of the standard of London Matriculation.

"A serviceable book which will contribute its share to the improvement of this important part of the French teacher's work."—*School World*.

Direct French Course. By H. J. CHAYTOR, M.A. 2s. 6d. With Vocabulary French-English, 3s.

The book is intended primarily for those who pass from elementary to secondary schools at the age of 12 or 13 with absolutely no knowledge of French, but it has been found to be a most suitable book for beginners generally.

"Those who have not yet been convinced of the advantage of the direct method might be induced to change their opinions on the matter by a study of Mr. Chaytor's 'Direct French Course.'"—*Secondary Education*.

Second Year Direct French Course. By G. A. ROBERTS, M.A., and H. J. CHAYTOR, M.A. With Vocabulary French-English and numerous illustrations. 3s.

A Second Year's Course following on Mr. Chaytor's *Direct French Course*. It is based entirely on the direct method. The reading matter deals not only with French life, but with such things as central and local government, the army, education, &c.

"Well conceived as a whole and carefully carried out."—*The Times*.

Groundwork of French Composition. By Professor ERNEST WEEKLEY, M.A. 3s.

An introductory book containing the main rules of French syntax as they affect composition, general hints on the turning of English into French, and a number of extracts.

"The Author's works have done much to raise the standard in French scholarship throughout the country."—*Secondary School Journal*.

Class Work in French Composition. By Professor ERNEST WEEKLEY, M.A. 3s.

This book, which consists of passages graduated in order of difficulty, is essentially for class work under the supervision of a teacher. Complete vocabularies in order of the text are provided.

"A useful series of continuous English passages for translation into French prose."—*School Guardian*.

Senior French Reader. By R. F. JAMES, B.A. With Introduction, Notes, and Vocabulary. 4s.

This reader consists of extracts in prose and verse long enough to be of sustained interest and representative of the best French writers of the last century.

"This is a splendid reader: one feels that a real peep into good French literature has been obtained."—*Schoolmaster*.

Senior French Unseens. By L. J. GARDINER, M.A., late French Mistress, Perse High School for Girls, Cambridge. 1s. 9d.

"We have no hesitation in recommending this book."—*Secondary Education*.

New Junior French Reader. By J. P. R. MARICHAL, L. és L., late Lecturer in French at Queen's University, Ontario, and L. J. GARDINER, M.A., late French Mistress, Perse High School for Girls, Cambridge. 3s.

For use in junior forms. Provision is made for oral practice, and a number of passages are given for retranslation into French.

"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

The Matriculation French Reader. By J. A. PERRET, late Examiner at the University of London. With Notes and Vocabulary. 4s.

The Notes contain comments on grammatical and linguistic points, and renderings to show the difference between French and English idiom.

"We can recommend this reader without reserve."—*School World*.

RECENT PUBLICATIONS

CAMBRIDGE GEOGRAPHICAL TEXT-BOOKS

Senior Text-book Now Ready

By G. F. BOSWORTH, F.R.G.S. With 71 illustrations and 29 maps and diagrams. Crown 8vo. 7s 6d net.

"This Senior Book, the third of a series of Geographical text-books on the concentric system, covers the ground for most of the examinations for pupils in the higher forms of central and secondary schools. . . . The numerous questions and exercises, carefully selected from recent examination papers, and compiled from the text of the book, should prove of real value to teachers."—*From the Editor's Note.*

Third Impression

ENGLISH FOR THE ENGLISH

A Chapter on National Education

By GEORGE SAMPSON, Hon. M.A. Cambridge, St John's College. Crown 8vo. 5s net.

"His book is important because it is a book of experience—of a practised teacher as well as of a practised man of letters. . . . Sound, brilliant, and entertaining—a book that should be read by all who believe that every schoolboy should be given the key to the best that has been thought, and said, in the world."—*The Daily News.*

The Cambridge History of British Foreign Policy, 1783-1919. Edited by Sir A. W. WARD, Litt.D., F.B.A., and G. P. GOOCH, M.A., Litt.D. Volume I, 1783-1815. Royal 8vo. 31s 6d net.

The Cambridge History of British Foreign Policy was designed as a connected narrative of the subject and a consecutive account of its bearing on the political history of this country and Empire, and that of the world at large. It will occupy three volumes, the first of which is now ready. The contributors to this volume are, Sir A. W. Ward, Dr J. H. Clapham, Dr J. Holland Rose, and Professor C. K. Webster.

The Growth of British Policy. By Sir J. R. SEELEY, Litt.D., K.C.M.G. Second edition, reprinted. Large Crown 8vo. 17s 6d net.

This book was first published in 1895 in two volumes, a second edition was issued in 1897, and it was subsequently reprinted. It is now published in a convenient form in one volume.

Medieval France. A Companion to French Studies. Edited by ARTHUR TILLEY, M.A. With 17 plates and 2 maps. Demy 8vo. 25s net.

The aim of this volume is to present to the reader within a moderate compass a survey of the history (political, military, naval, and economic), language, literature, and art of Medieval France. The volume is the work of ten writers, all experts in their several provinces.

The Cambridge Medieval History. Planned by J. B. BURY, M.A., *Regius Professor of Modern History.* Edited by H. M. GWATKIN, M.A., J. P. WHITNEY, D.D., J. R. TANNER, Litt.D., and C. W. PREVITÉ-ORTON, M.A. Volume III, *Germany and the Western Empire.* With 11 maps in separate portfolio. Royal 8vo. 50s net.

"The possession of the first time of a standard work of reference on the subject, provided with bibliographies which enable the student to investigate further on his own account, is an acquisition for which we have much cause to be grateful."—*The Cambridge Review* on Vols I and II.

A Treatise on the Analysis of Spectra. Based on an essay to which the Adams Prize was awarded in 1921. By W. M. HICKS, Sc.D., F.R.S. Royal 8vo. 35s net.

"The object of the present treatise is to present, as a more or less connected whole, the knowledge already obtained, and thus to provide an introduction to the subject for those desirous of entering on its study, as well as a book of reference for data for those working in it."—*From the Introduction.*

Readings in English Social History from Contemporary Literature. Edited by R. B. MORGAN, M.Litt. Vol IV, 1603-1688 A.D. With 12 plates. Crown 8vo. 4s.

"Any one who will read this little volume through with attention and look carefully at the well-chosen illustrations provided, will certainly build up in his mind a lively picture of sixteenth-century England, so vigorous alike in soul and body."—*Notes and Queries* on Vol III.

A Guide to English Gothic Architecture. Illustrated by numerous drawings and photographs. By SAMUEL GARDNER. With 180 photographic plates and 56 figures in the text. Imperial 8vo. 16s net.

"A handy volume with 236 illustrations, and hardly a word wasted." *The Times.*

Principia Ethica. By G. E. MOORE, Litt.D. Second impression. Demy 8vo. 15s net.

"A clever, interesting, and stimulating volume, which any one will do well to read who wishes to obtain clear ideas in an important department of philosophy."—*The Literary World.*

Seneca and Elizabethan Tragedy. By F. L. LUCAS, B.A. Crown 8vo. 7s 6d net.

"The ground has been covered before, but rarely with such a grasp of the poetic essentials and such a concentration of history and argument. Mr Lucas gives an admirable sketch of Seneca and Seneca's Rome, and then pilots us through the early medieval mists into the radiance of the Renaissance. . . ."—*The Manchester Guardian.*

The Story of Dr Johnson. Being an introduction to Boswell's Life. By S. C. ROBERTS, M.A. Crown 8vo. With a portrait of Johnson. 2s 6d.

This book was first published in 1919 and quickly reached a second edition. A cheap school edition is now produced in the hope of introducing a larger circle of young readers to the study, and the charm, of Johnson and his age.

The Provinces of Ireland. General Editor, GEORGE FLETCHER, F.G.S., M.R.I.A., of the Department of Agriculture and Technical Instruction for Ireland. Now ready. **Leinster**, 7s 6d net, and **Connaught**, 6s 6d net. With maps, diagrams, and illustrations. Crown 8vo. Previously published, **Ulster and Munster**, 6s 6d net each. Prospectus on application.

"Should become the pocket companion of every traveller in Ireland." *The Times Literary Supplement.*

MACMILLAN'S LATEST LIST

VOLUME I. JUST PUBLISHED.

A Dictionary of Applied Physics. Edited by Sir RICHARD GLAZEBROOK, K.C.B., D.Sc., F.R.S. In 5 vols. Medium 8vo. Fully illustrated. £3 3s. net each. Orders for the complete set of five volumes will be accepted through a bookseller at the price of £14 14s. net, payable in advance.
Vol. I. MECHANICS—ENGINEERING—HEAT.

* * Full descriptive Prospectus post free on application.

The Spectator.—"The editor's object, namely, to supply the practical man with a full and accurate statement of the researches of the physicist, who is concerned with principles, appears to have been fully attained. The book is admirably planned and the separate articles are thoroughly scientific in treatment. We shall look with interest for the remaining volumes of a work that does great credit to British men of science and to the publishers."

SECOND EDITION. THOROUGHLY REVISED.

A Treatise on Bessel Functions and their Applications to Physics. By ANDREW GRAY, F.R.S., and G. B. MATHEWS, F.R.S., sometime Fellow of St. John's College, Cambridge. Second Edition prepared by A. GRAY and T. M. MACROBERT, D.Sc. 36s. net.

PART IV, JUST PUBLISHED.

A Class-Book of Physics. By Sir RICHARD GREGORY and H. E. HADLEY, B.Sc. Part IV, Light. Illustrated. 2s.

First Books of Science. New Vol.

A First Book of Applied Electricity. By S. R. ROGET, M.A., A.M.Inst.C.E., &c. Illustrated. 2s. 6d.

The Technical Journal.—"It is clearly written, and if it stimulates a reader to ask for more, and also a better understanding of some of the formulae, a useful service will have been served."

English Composition : A Systematic Course for School Use. By HARRY PINE. With an Introduction by F. H. HAYWARD, D.Litt., M.A., B.Sc.

Teacher's Edition. Crown 8vo, cloth. Price 3s. 6d. net.

Pupil's Edition. In Two Parts. Paper 8d. net, Cloth 11d. net each.

Old Ballads of England and Scotland. Selected

and edited, with Introduction, Historical Notes, and full Glossary, by ROBERT ARMSTRONG, Secondary School, Gateshead. Crown 8vo., cloth, 203 pages. Price 2s. 3d. net.

The Story Thread. By EDITH KIMPTON, M.A.,

A.K.C. Illustrated with 21 Line Drawings by PETER CAMPBELL. Crown 8vo. 155 pages. Cloth. Suitable as an introduction to the study of English Literature for the Younger Classes. **Reduced Price, 2s. net.**

READY THIS MONTH **PAULATIM:**

A Translation and Composition Book based on the Syntax of the Latin Complex Sentence. By PERCY H. REANEY, M.A., Classical Master, Sir George Monoux School, Walthamstow. Crown 8vo. Cloth. 256 pages. Price 4s. net.

This book is designed to ease the transition from the primer to the Latin author. It anticipates and embodies in a remarkable way the recommendations and findings of the recently appointed Committee on Classics.

Its chief characteristics are : (1) Translation and Composition are treated side by side. (2) Rules are deduced from numerous examples. (3) The Latin passages are carefully selected from Latin authors to illustrate the construction dealt with, and continuous passages, complete in themselves, are chosen whenever possible. (4) Most of the exercises for translation into Latin are continuous passages. (5) More attention than is usual at this stage is devoted to the Latin Period and *Oratio Obliqua*.

Copies on Loan or Approval on application.

Book Ways : An Introduction to the Study of

English Literature. By EDITH KIMPTON, M.A., A.K.C. New edition, with a Prefatory Letter by the late THEODORE WATTS-DUNTON. Crown 8vo. Cloth. 296 pages. An excellent supplement to "The Story Thread," for use in the Upper Classes. Price 3s. 6d. net.

The Old Order and the New. (Book III of "The

Ancient Civilizations" Series), being the story of the **Roman Empire and the Beginnings of Modern Europe.** By EMILY M. BURKE, L.L.A., Hornsey County School. Crown 8vo. Cloth. Price 3s. net. *Full Prospectus on application.*

"This well printed book continues a series of which the previous volume deals with Ancient Greece and Republican Rome. The book is intended for pupils in the middle and senior forms of secondary and central schools. It is an excellent survey. . . ."—*The Times Educational Supplement*.

With "The Shining East" (2s. 3d. net) and "The Violet Crown and the Seven Hills" (3s. net) it completes one group of a series, yet it is at the same time complete in itself.

REVIEWS AND MINOR NOTICES.

EDUCATION.

The History of Education. By ELLWOOD P. CUBBERLEY. (18s. net. Constable & Co.)

Having boxed the compass of the various subjects that fall to the lot of a professor of education, Dr. Cubberley here returns to his first love, and gives us a compendious treatise on the history of education. He recognizes that there is not exactly a dearth of such histories, but claims that his treatment is sufficiently distinct to give it a right to a place in educational literature. He does not compete with Paul Monroe's text-book that has won for itself an established place in the universities of the world. The new book deals not so much with educational theories and their classification as with the actual work of education throughout the ages. Here he comes into competition with Prof. J. W. Adamson, who has made it his specialty to inquire into what actually took place in the schools at the different periods. His "Short History of Education," however, covers only a comparatively brief period, though it covers that exceedingly thoroughly. There appears, accordingly, to be room for the new book, particularly as its author approaches his subject with a definite reference to the development and spread of civilization in the west.

To a certain extent the book is self-contained, and may be read with complete understanding without reference to any other work of its author. But if it is intended to be used as a class-book it will be necessary for the reader to provide himself with a copy of Prof. Cubberley's "Readings in the History of Education." This runs to 684 pages, and the present work to 849, so that between them the student has an historical library sufficient for all his needs. The whole constitutes a body of work that should satisfy even the exacting demands of the American university public, that appears to expect from its educational professors an output of an ordinary book every year. Each of these volumes should count for at least a quinquennium.

The first two parts of the present book deal with the Ancient and the Medieval World. They contain nothing very new, but they are efficiently done and give just the information that the student is expected to acquire. The matter is presented in a very attractive way, and some points are made with unusual skill, as, for example, the transition from home education to school education at Rome, the relation of Christianity to the Roman system, and the Moslem influences tending towards a renaissance. But Prof. Cubberley is at his best in the transition period and in modern times, particularly towards the end of the book, for it may fairly be said that the value of the work goes on increasing as it approaches modern conditions. Chapters XVI, XVII, and XVIII, are more like other text-books than the rest, but with really modern times our author comes into his own and is at home. While he has a full and generally sympathetic appreciation of the ancient and medieval problems, his active interest appears to be in the developments of our own time and the period that immediately preceded. His account of English education in the nineteenth century is socially interesting to our readers, and they will find that he has given an excellent presentation of the essential points. We can learn more from the book, however, where it brings in American conditions as a contrast to those of Europe. It may be complained that the last part of the book has too much of an American flavour. But though Chapter XXVI is given up entirely to American affairs, it is certainly not the least instructive section to us on this side. The remaining chapters are of particular value to us in our present educational difficulties. It would be to the best interests of these islands if our educational administrators could be called upon to read the last three chapters.

The book is copiously illustrated and has an excellent index. The chapters are followed not only by a list of selected readings from the author's companion book, with questions on them, but also by a list of questions for discussion. It is an altogether workmanlike production.

CHRISTIANITY.

An Introduction to the History of Christianity, A.D. 590-1314.

By Prof. F. J. FOAKES-JACKSON. (20s. net. Macmillan.)

In this volume of less than four hundred pages Dr. Foakes-Jackson gives a survey of the salient aspects—the developments and institutions—of the Middle Ages. In his Preface he explains that the object of the work is “to give such an introduction to the history of the Middle Ages as to make its readers desire more knowledge of this important epoch in the development of mankind.” He adds, “I have attempted to present the main features of the period, treated in chapters which are rather essays than chronicles, with the hope of stimulating further inquiry.” The excellent bibliographies appended to each chapter will certainly facilitate such further study.

The scope of the book can be seen from the following titles of chapters: “The Pillars of the Medieval Church” (Monasticism and the Papacy), “The Church and the Empire,” “The So-called Dark Ages,” “The Church Empire of the West,” “The Revival and Reorganization of the Papacy,” “The Crusades,” “Learning and Heresy in the Early Middle Ages,” “The Medieval Church as a Disciplinary Institution,” “The Friars, the Schoolmen, the Universities,” “England,” “A Survey of Society,” “Dante and the Decay of Medievalism.” These titles are, perhaps, the most important.

It will be at once evident that the book is full of interest. It will be particularly useful as a first survey on a large scale for the study of the medieval period, which, in spite of the author's complaint that the subject “does not appear to be for the moment popular in the universities of Great Britain or America,” is exciting great interest, and was quite recently the theme of a series of university lectures in London, which have been published in volume form under the editorship of Prof. Hearnshaw. A useful list of important Popes concludes Dr. Foakes-Jackson's volume.

THE INFLUENCE OF DIET.

Diet and Race : Anthropological Essays. By F. P. ARMITAGE. (7s. 6d. net. Longmans.)

Geographers and historians no less than zoologists and anthropologists are concerned in elucidating the problems associated with the origin and distribution of the varieties of the human species. The question was discussed even in classical times, and attention drawn to the fact that the negro races inhabited the hotter and more humid parts of the then known world. The influence of latitude, altitude, and climate, have been repeatedly discussed, together with the features of racial intermingling. The present volume presents a series of essays on the influence of diet, which include many new presentations of already known facts which throw further light on some of the discrepancies noted by previous investigators.

The first essay deals with the relation of diet to physique, the author pointing out that the majority of short people inhabit inhospitable and isolated districts; whether in arctic, torrid, or temperate climates, scarcity of food is associated with diminutive stature. It is not so clear whether he regards man as having developed from a diminutive type as a result of gradual improvement in his means of alimentation or considers the modern dwarf races as examples of degeneration. In this connexion he might have dealt with the observations of Collignon and others that those born in inhospitable areas but brought up elsewhere attain to a greater stature than those remaining in their native environment, and with the abundant evidence of the steady improvement in the physique of the peoples of western Europe during the last two centuries,

when the cost of living has been reduced and so more food has been available for the family. The author draws attention to the importance of the nature of the food. Fish and flesh eaters have powerful frames when this is readily available, small frames if it is scarce, but always show great energy and stamina, but the perishable nature of the food renders them improvident and gregarious. He might have added that a hunting life required the communities to be small or migratory. Those whose staple food is wheat have greater energy, if less endurance, than the foregoing; owing to the stability of their food they are the pioneers of the world. Rice eaters are men of poor physique and feeble stamina, but thrifty and numerous. The best results are found where there is a mixed diet.

In essays on diet and colour Mr. Armitage shows that the discrepancies arising when the attempt is made to explain coloration as due to the influence of light and particularly of tropical light are minimized if consideration is paid to the amount of salt in the dietary, and he concludes that an increased intake of salt leads to a lessened action of light on pigmentation. He gives a detailed study of the amount and the sources of the salt available in different areas, and shows how important a part this substance has played in the origin of trade routes. Some of his conclusions may be subject to revision in the light of further knowledge, since the works from which he has obtained his data are admittedly not the most recent, but the idea should prove stimulating to the racial geographer.

In a final essay he discusses the relation between the food and the cranial form as affected by the mechanics of the lower jaw. This is of importance in reviewing the stages of human evolution, and the section would have been better for expansion and further reference to the work on these lines of Sir Arthur Keith, Prof. A. Thomson, and Dr. Harry Campbell. The essays should serve to illuminate some sections of the teaching of geography in its relation to human elements, and as such will no doubt be read with interest by many.

CLASSICS.

Ancient Greece : A Study. By STANLEY CASSON. (2s. 6d. net. Oxford University Press.)

Not a story for children, but an analytical study, by a Fellow of an Oxford college, of the factors which made for the rise, the peculiar perfection, and the decline of the Greeks, this book raises expectations which it does not entirely fulfil. Of course, this may be the fault of the expector and not of the author. But in his anxiety to avoid the inane raptures of the “classical enthusiast,” Mr. Casson has become rather too jejune and matter-of-fact. He devotes thirty-three pages to a rough survey of the historical conditions under which the Greeks developed from 1100 B.C. to 450 B.C., and he shows well how these conditions tended to produce that directness and endurance which are so characteristic of the Greek spirit. Then the second portion of the book is devoted to an examination of the Greek himself, of his social, moral, and spiritual life. Mr. Casson's judgment is always sane, and at times very happily expressed, as, for example, his summary of the religious attitude of the average Athenian in the age of Pericles as “the creed of mankind consciously at the summit of its development, of a mankind proud of and satisfied with its achievements, and meeting its deficiencies not with pride nor yet with humility, but with the steady gaze of perfect control” (page 50). The contribution of material surroundings towards the production of this attitude is rightly stressed in subsequent pages, and the book concludes with an examination of the causes—not forgetting malaria—which led to the decline of Greece. Mr. Casson is aware of the defects of the Greek character, and gives full significance to the ravages of *στάσις* but his dismissal of *παιδευσθῆναι* in fourteen lines is rather perfunctory. Occasionally we notice a distortion of reference, such as the quotation of “You will never step into the same river twice” from Heraclitus (on page 42) which we should not expect to find in a book intended for scholars, and *dormital* *Homerus* with a vengeance when an Oxford don speaks of the Aristotelian *μεσότης* as though it were a quantitative mean between two extremes, as Mr. Casson does on pages 75 and 76. The dozen illustrations are unusually good and of unusual interest.

EDUCATION.

Mentally Deficient Children: Their Treatment and Training. By Dr. G. E. SHUTTLEWORTH and Dr. W. A. POTTS. Fifth Edition. (10s. 6d. net. Lewis.)

The issue of a new edition testifies to the well-deserved popularity of this book, which was the forerunner of those serving alike the needs both of the medical and of the educational professions, and which may be said since its first appearance in 1895 to have kept its light shining a little in front of the rest.

The educationist will be specially attracted to the sections on educational and industrial training which set out the results noted by the authors in the course of an almost unique experience of the mentally defective in institutions, schools, and the world. Special consideration is given to the value and the limitations of psychotherapy as a means of treatment of some of the features of conduct of those innately defective, and as an aid to the differential diagnosis between moral imbecility and the neuroses of adolescence. The social reformer will find an excellent account of the efforts made by the Birmingham Justices to investigate the mentality of juvenile delinquents brought before them. This is largely pioneer work in this country, following the example set in Chicago and Boston, and it is interesting to note that Dr. Potts bears testimony to the advantages of training and control of the young delinquent over a considerable period. He regards it as unfortunate when young prisoners charged for the first time are therefore discharged, because he has often found they have been on the wrong path for some years. This is the more important as in some quarters there would appear to be a tendency to minimize the really valuable work in character formation and reformation carried out in many of our schools.

The War List of the University of Cambridge, 1914-1918. Edited by G. V. CAREY. (20s. net. Cambridge University Press.)

This handsomely produced volume, of over 600 pages, is a fitting memorial of the response made by Cambridge men to their country's call in the hour of war. The summary at the end—a table giving statistics of distinctions, etc., gained—is an idea which might be adopted in all "War Lists"; we could then compare the collective records of the "educated" and the "uneducated" soldier. To judge from the summary in this volume, Cambridge would stand very high indeed upon any such comparison.

- (1) "Riverside Text-Books in Education: Division of Secondary Education": (a) *Experimental Education*. By Dr. F. N. FREEMAN. (7s. 6d. net.) (b) *The Psychology of the Common Branches*. By Dr. F. N. FREEMAN. (7s. 6d. net.) (c) *Statistical Methods Applied to Education*. By Prof. H. O. RUGG. (10s. 6d. net.) (2) *National Intelligence Tests*. Prepared under the auspices of the National Research Council and Revised for Use in English Schools. Specimen Set. (2s. 6d. net.) (3) *The Principles of Education*. By Prof. W. C. RUEDIGER. (7s. 6d. net. Harrap.)

Of these, the "National Intelligence Test" is the only one that is quite new. The success of the Intelligence Tests in the American Army was so marked that the U.S.A. General Education Board made an appropriation of \$25,000 to be used for the preparation of methods of measuring the intelligence of school children, and the Tests now published are a part of the work of the committee that was appointed in consequence. The documents are meant for mass testing, and make the minimum demand for time from the teachers. They are accompanied by a Manual of Directions, and the packet is therefore self-interpreting, and can be used by any teacher of ordinary intelligence without any special training in testing. The tests have been revised in such a way as to make them applicable to English conditions, without which of course they would be of little value on this side of the Atlantic.

Most of the other books have been already favourably reviewed in these columns, so we are pleased to find them thus issued in a uniform get up. "Statistical Methods" is a very valuable book in these days of quantitative treatment of educational problems. So many of our newer educational texts take for granted the commoner terms and formulae, that the intelligent but non-specialist reader is often at a loss. Everything he needs in the way of explanation is here provided in a clear way. The matter is made as attractive as such matter can be made, and the general reader can take from it as much as he desires. The real student of the newer educational methods will, however, need to master the book. It is indeed essential to all students of this type.

Ruediger's "Principles" has now taken permanent rank among the half-dozen books with the same title that now enrich

pedagogical literature in English. It has amply justified the praise with which it was received on its first appearance.

Dr. Freeman's two books have a very practical turn. They will certainly commend themselves to class-room workers who want guidance on the psychological side. Since there are half a dozen books with the title "Principles of Education," it seems useless to find fault with Mr. Freeman for appropriating the title that we, in this country, associate with the name of Dr. Rusk. But the "Experimental Education" that comes from Chicago is quite different from the "Experimental Education" that comes from St. Andrews. The two books are complementary to each other, each is no doubt of most use on its own side of the Atlantic: yet each has a special value in bringing the two ideals of education into their true relations to each other. The present reviewer did not happen to have seen "The Psychology of the Common Branches" when it appeared in 1916: accordingly, he was more interested in it than in the others that he had previously read. This departmental psychology, or psychology in commission, is apt to lead to a false perspective, unless readers are fairly well grounded in general psychology. But the place of general psychology may be either before or after this departmental form. If it comes after, then the material supplied in this volume forms the data on which generalization may be justified, whereas if it comes first, Dr. Freeman's materials form admirable illustrations of generalizations already attained.

Teachers will welcome this handsome addition of four volumes to the technical literature of their subject.

ENGLISH.

Fourteenth Century Verse and Prose. Edited by KENNETH SISAM. (7s. 6d. net. Clarendon Press.)

Good and useful anthologies of Middle English literature are already available for the student and general reader, so that the gap which this book seeks to fill is not obvious. If its purpose be to give examples of the best writers of the fourteenth century, other than Chaucer, it may be said to be successful; but to issue a book of this kind without a glossary is a serious mistake which is not compensated for by the promise of one at some future date. The volume consists of (1) a general introduction which is interestingly though rather floridly written, and surveys the chief literary features of the century, (2) short introductions to the extracts, (3) explanations of difficulties in these, and (4) a short sketch of the English language in the fourteenth century as an appendix. The extracts have been chosen with discrimination and taste and the notes are clear and to the point.

Eton Fables. By CYRIL ALINGTON. (3s. 6d. net. Longmans.)

A vivid recollection of *Shrewsbury Fables* reviewed in these columns at the time of its publication, led us to expect a couple of hours of real pleasure and profit in the perusal of this new collection. And our expectations of *Eton Fables* have not been disappointed. Mr. Alington has a gift, which surely amounts to genius, for using this literary form so as to compel the interest of boys, and at the same time to deal most effectively with some moral or spiritual problem. An old tree in his garden, or a box of matches on his study mantelpiece, or the school yard, or a moving staircase at Paddington, furnishes the text of an entrancing and effective discourse in the form of a fable. We hope this book will find its way to many a home and to many a head master's (aye, and head mistress's) desk. Mr. Alington's gift is peculiarly his own, and few of us could successfully imitate him. But, with a little adaptation, to which we are sure he would not object, the privilege of hearing his delightful fables might be shared by thousands of boys and girls to whom *Shrewsbury* and *Eton* are little more than names.

GEOGRAPHY.

Cambridge County Geographies.—Hampshire. By TELFORD VARLEY. (3s. 6d. net. Cambridge University Press.)

Like the other volumes in the series, this book is well printed and beautifully illustrated. Historically as well as geographically, Hampshire is a very interesting county, and all the important features are effectively dealt with in the course of the various lessons.

The Human Geographies (Secondary Series).—By J. FAIRGRIEVE and E. YOUNG. Book I, *The British Isles*. (2s. 9d. Philip.)

This book, intended for use in secondary schools, is written in the same style and on the same general lines as those in the Primary Series. Human activities in relation to geographical conditions are emphasized in all the descriptions, and particular attention is given to the great industrial areas, to the positions of towns and the important railway routes. At the end of each chapter practical exercises are given to supplement the work in the text

HISTORY.

China, Japan, and Korea. By J. O. P. BLAND.
(21s. net. Heinemann.)

Readers of Mr. Bland's former work, "Recent Events and Present Policies in China (1912)," will welcome the present volume, in which the author brings the economic and political history of the Far East up to date (1921). After tracing in close detail the succession of recent events in republican China, in which he shows the futility of endeavouring to Westernize Eastern political institutions, Mr. Bland draws a vivid picture of the country under the heel of the rapacious Tuchuns, whose bandit armies prey upon every form of productive industry, while the lack of an effective Central Government renders it impossible to keep disorderly elements in check. Only a benevolent despotism can, in Mr. Bland's opinion, save China from political and economic bankruptcy. The chapters on Japan's vital problem and her policy in China and Korea are a brilliant and statesmanlike contribution, and should be read by every representative at the Washington Conference. Put simply, Japan's population, to live, must either spread over the adjacent Asiatic shore lands or obtain food from a reorganized China. It is only fear of moral isolation that has hitherto prevented her from interfering more largely in Chinese affairs. Mr. Bland has some bitter things to say, in this connexion, of the "racial equality" decisions of the Versailles Conference and of the British and American Exclusion Laws. Every student of Far Eastern affairs should read this book, which is the most enlightened and inspiring work on the subject that we have read.

A Century of Revolution, 1789-1920. By MARGARET KENNEDY.
(5s. Methuen.)

Miss Kennedy's "Century of Revolution" covers the one hundred and thirty-one years which have elapsed since the outbreak of the French Revolution. It can hardly be contended that a new history of this period was urgently called for; it has been treated in a score of text-books during the last decade. Nor can it be said that Miss Kennedy adds much to our knowledge of the period. Nevertheless, she tells the familiar story agreeably, and she co-ordinates social and literary movements with the current of political events. Eight outline maps are incorporated with the text.

MATHEMATICS.

Commercial Arithmetic. By H. HALL.
(3s. 6d. net. Collins.)

A clear and fairly comprehensive account of the arithmetic of commerce. It is interesting to observe that the advantages to be derived from a decimalization of money and weights and measures are at length beginning to be more fully realized. So long as the present systems are maintained it is necessary to decimalize at the beginning and dedecimalize at the end of every calculation. The author lays undue stress upon contracted methods and advocates the reversal of the multiplier, a most fruitful source of error. Logarithms are introduced at the end, but we may hope that in time they will be taught at the beginning, and then there will be no need to trouble about contracted multiplication and division.

An Introduction to the Theory of Relativity. By L. BOLTON.
(5s. net. Methuen.)

This is an amplification of the essay which gained the prize offered by the *Scientific American* for the best popular exposition of Relativity. Whether the "man in the street" will rise from a perusal of this book with any clear idea of what Relativity is and of the steps whereby Einstein arrived at his theory, is perhaps doubtful, for although the amount of mathematical symbolism introduced is small, what there is requires for the understanding of its significance a certain amount of preparation. However, any one who has some elementary knowledge of co-ordinate geometry and the differential calculus should have no difficulty in following Mr. Bolton's exposition. So far as the restricted theory is concerned, a complete statement of the argument leading up to the Lorentz transformation can be given without employing any advanced analysis. It is otherwise with the general principle, and in dealing with this the author has had to content himself with suggestive illustrations of the line of reasoning followed. The final chapter is a brief but well balanced review of the bearings of the theory upon the problems of the aether, the extent of the universe, and action at a distance. Mr. Bolton is to be congratulated upon a by no means unsuccessful attempt to make comprehensible to persons without special mathematical training some of the ideas which Einstein has embodied in the mysterious language of tensors.

MODERN LANGUAGES.

Collection Gallia.—G. LENOTRE: *Histoires Etrangères qui sont arrivées*. (2s. 6d. net. Dent.)

It is with pleasure we note the appearance of the 35th volume of the excellent Collection Gallia. These books are well produced and form most useful material for the modern language teacher and student, whom they enable to escape from the ordinary run of French texts. M. Lenotre as one of the chief contributors to *Le Temps*, is eminently readable, and his knowledge of the by-ways of history is unsurpassed.

"Macmillan French Series": *Aid to French Pronunciation, with Numerous Drawings and Exercises.* By E. TILLY. (5s. net.)

This manual, written by the son of Mr. William Tilly, who was for many years a tutor at Berlin, is a complete exposition of the art of pronouncing French. It is fully illustrated with diagrams of the position of all the vocal organs when pronouncing the sounds of French, especial prominence being given to those which are strange to English or American mouths. To those who believe in phonetics it will be welcome; but to others it may be regarded as taking up too much of the brief time available for French. For the majority of pupils who will never go to France or meet a Frenchman, it seems more essential to learn how to read French, and if possible to write it without making too elementary errors.

The Oral Method of Teaching Languages.

By HAROLD E. PALMER. (5s. net. Heffer.)

Mr. Palmer has followed up his *Principles of Language-Study* with a detailed text-book of what he calls "The Oral Method"—that is, the method of teaching languages by conversation only. In his first volume he was careful to explain that he did not consider "the oral method" to be a complete method of language-study; in this volume he lays down definitely the principles by which teachers should be guided in its application. "Written work should, if possible, be excluded from the earlier stages of language-teaching" is his rule, emphasized with all the force of italics; and by "the earlier stages" he means "the first three to six terms." He supports this proposition by chapters in which various types of conversation are illustrated and elaborated. The conversations are by no means of the ordinary text-book kind; they are methodical and systematic exercises in the expression of thought in a foreign tongue, and they include some designed to give practice in grammar. They are frankly inhuman, and the pupil's interest will be wholly the interest of acquiring a capacity and making progress. Whether Mr. Palmer's method is fitted for the classroom is a question we have not the necessary space to discuss, but teachers who find that their oral work is apt to degenerate into chatter may be safely recommended to study his ingenious exercises. In too many language classrooms method and system in conversation are lacking.

Marlborough's English Grammar Self-Taught for the French: *La Grammaire anglaise sans Maître.* Par JOHN TOPHAM. (L'Ouvrage complémentaire "L'Anglais sans Maître." (3s. 6d.)

This is a book on old-fashioned lines. The pronunciation is indicated in the old way customary before the phonetic alphabet was invented, e.g. feud (houde). Verbs are conjugated at enormous length: e.g. the future participle of "not to be praised" is given as "n'étant pas sur le point d'être loué." How many years would a student read French before needing such a form? The same uninteresting exercises occur as in pre-Ollendorffian works, e.g. "Les couteaux et les cuillers sont des choses utiles." A French student of English could find many more effective books than this.

De la Terre à la Lune. By JULES VERNE.

Edited by J. B. PATTERSON. (1s. net. Oxford University Press.)

This much abbreviated version of Jules Verne's well-known story forms a suitable addition to the "Oxford French Plain Texts." It is clearly printed, and the proof has been well read. Such books, issued at a reasonable price, and calculated to induce our pupils to do some private reading in French, are always welcome.

Von dem Jungsten Tage: A Middle High German Poem of the 13th Century. Edited with Introduction and Notes by L. A. WILLOUGHBY. (7s. 6d. net. Oxford University Press.)

It is gratifying to find such scholarly evidence that interest in Middle High German literature has not ceased in this country. The poem which Mr. Willoughby has selected for treatment is of intrinsic literary value, and is at the same time a good example of the many writings that deal with the last judgment.

(Continued on page 398.)

FROM THOMAS MURBY & Co's LIST.

GEOLOGY.

For the School Library and the Teacher.

THE STUDY OF CRYSTALS IN SCHOOLS. By T. V. BARKER, University Lecturer in Chemical Crystallography, Oxford, and Fellow of Brasenose College, Oxford. 9d. net.

PRACTICAL SUGGESTIONS TOWARDS THE STUDY OF CRYSTALS IN SCHOOLS. By T. V. BARKER. 1s. net.

A pocket edition in limp cloth with rounded corners.

GEOLOGICAL EXCURSIONS ROUND LONDON.

By G. M. DAVIES, M.Sc., F.G.S. 3s. net.

RUTLEY'S MINERALOGY.

Revised by H. H. READ, A.R.C.S., B.Sc. 6s. net.

MINERALS AND THE MICROSCOPE. By H. G. SMITH, A.R.C.S., B.Sc., F.G.S. 5s. net.

AN INTRODUCTION TO PALÆONTOLOGY.

By A. MORLEY DAVIES, A.R.C.S., D.Sc., F.G.S., Lecturer on Palæontology, Imperial College of Science. 12s. 6d. net.

CRYSTALLOGRAPHY.

A series of Nets (with instructions) for making a set of 41 models of Crystals. 3s. net. These Nets are also supplied mounted on cards ready for making into models.

Recent volumes in the same series:—

PETROGRAPHIC METHODS AND CALCULATIONS.

By ARTHUR HOLMES, D.Sc., A.R.C.S., D.I.C., F.G.S. 31s. 6d. net.

THE NOMENCLATURE OF PETROLOGY.

By ARTHUR HOLMES, D.Sc., A.R.C.S., D.I.C., F.G.S. 12s. 6d. net.

Three new volumes in Murby's Geological Series.

AN INTRODUCTION TO SEDIMENTARY PETROGRAPHY.

By H. B. MILNER, M.A., D.I.C., F.G.S., Lecturer in Oil Technology, Royal School of Mines. [End of June.

GRAPHICAL AND TABULAR METHODS IN CRYSTALLOGRAPHY.

By T. V. BARKER, University Lecturer in Chemical Crystallography, Oxford. [End of June.

AN INTRODUCTION TO STRATIGRAPHY.

By Dr. L. DUDLEY STAMP, late of King's College, London. Will be published about end of September.

COLLECTIONS AND APPARATUS

For the Geological Section of the School Museum.

Mineral Collections.	Micro Sections.
Rock Collections.	Microscopes.
Fossil Collections.	Blowpipe Apparatus.
Crystals.	Card Trays.
Models of Crystals.	Cabinets.

SMALL COLLECTIONS (for Beginners). 20 specimens of each. (a) Precious Stones. (b) Earthy Minerals. (c) Sedimentary Rocks. (d) Metallic Minerals and Ores. (e) Metamorphic, Igneous, and Volcanic Rocks. (f) British Fossils.

FOR FIELD WORK : Hammers, Chisels, Satchels, &c.

Leaflets to the number of upwards of thirty have been prepared, giving particulars of these Collections and Apparatus, any of which will be sent post free on application.

RELIGIOUS INSTRUCTION.

For Schools where Text-books are used as supplementary to the Teacher's Work.

OLD TESTAMENT COMMENTARIES.

By Dr. G. W. WADE and Rev. J. H. WADE.

Larger Series. II Samuel. 4s. net.

Smaller Series. II Samuel. 2s. net.

"The name of Dr. Wade is sufficient to guarantee careful and conscientious work. In our opinion the editors have accomplished a difficult task with a remarkable degree of success."—*The Journal of Education*

DR. KNAPP'S NEW TESTAMENT COMMENTARIES.

Larger Series :

St. Mark. 2s. 6d. net.

St. Luke. 4s. net.

The Acts. 4s. net.

Smaller Series :

St. Matthew. 2s. net.

St. Mark. 2s. net.

St. Luke. 2s. net.

The Acts (i) (i.—xvi.). 2s. net.

The Acts (ii) (xiii.—xxviii.). 2s. net.

The first notice of the first volume in Dr. Knapp's series was as follows:—

"Dr. Knapp does not serve up the usual trite commonplace stuff that too often finds a place in popular handbooks. He has made a real study of the questions with which he deals, and is in contact with the recent important literature dealing with his subject: in consequence, he manages to impart to his discussion a freshness too often wanting."—*The Journal of Education*.

The following is a notice of the most recent volume of Dr. Knapp.

"Dr. Knapp's manuals have now won a place for themselves in the newer school commentaries on the Gospels and the Acts and this edition of a smaller work on St. Matthew follows on the lines of its predecessors. It combines the results of modern scholarship with a reverence for the Scriptures based on the conviction of their sacred character and purpose."—*Times Educational Supplement*.

ELECTRICITY AND MAGNETISM.

Three books supplementary to the Teacher's Work, which provide numerous well selected examples for the Student to work; the explanation is only brief.

MAGNETIC MEASUREMENTS AND EXPERIMENTS.

By A. RISDON PALMER, B.Sc., B.A., Head of the Matriculation Department, the Polytechnic, W. Second Edition. With Answers, 2s. net.

Each chapter contains a set of experiments, arranged to reduce a duplication of apparatus as far as possible (or graphical questions), a short account of the theory to supplement the class lesson, some fully worked examples, and a set of carefully graduated exercises for the student to work.

ELECTRICAL EXPERIMENTS.

By A. RISDON PALMER, B.Sc., B.A., Head of the Matriculation Department, the Polytechnic, W. 2s. net.

A course for one or two years. Details are given as to Apparatus and the method of procedure and the setting out of results.

HOBBS'S ARITHMETIC OF ELECTRICAL MEASUREMENTS.

Revised by the same Author. 2s. net.

Brief explanation; supplementary to the teacher's work; provides numerous well selected examples for the student to work.

DRAWING, CUTTING, AND MODELLING IN CARDBOARD.

A Course suitable for Scholars in the Lower Standards. With Teaching Notes and Illustrations. By W. A. MILTON, Principal of the Central Rand Manual Training Centres, Johannesburg. With Preface by F. HANDEL THOMPSON, Inspector Johannesburg and Rand Schools. Crown 4to, 7s. 6d. net.

There are 42 full-page plates and numerous smaller illustrations.

THOMAS MURBY & Co., 1 FLEET LANE, LUDGATE CIRCUS, E.C. 4.

In his introduction the editor shows his thorough acquaintance with this body of literature, and in his discussion of the authorship, date, dialect, &c., he shows that thoroughness which may be expected of one who has studied under Prof. Priebisch. The critical apparatus is admirable, and we have no hesitation in regarding this as likely to remain the standard edition of "Von dem Jungstem Tage." The specialist will be glad to possess it, and for the young student it is a model of method.

Giacosa: Una Partita a Scacchi. (The University of Chicago Italian Series.) Edited by R. S. PHELPS. (8s. 6d. net. The University of Chicago Press.)

The number of simple Italian texts edited for school purposes is small, no doubt owing to the small number of those who learn that beautiful language. Giacosa's little play—it runs to about 650 lines—is charmingly written. Based on an episode in the old French tale of "Huon de Bordeaux," it tells how a game of chess is played as a test by one who seeks the love of the fair Iolanda. The notes explain such references and grammatical difficulties as occur in the text, and there is an Italian-English vocabulary. The price seems high for a book of eighty pages.

PSYCHOLOGY.

The Foundations of Aesthetics. By C. K. OGDEN, I. A. RICHARDS, and J. WOOD. (7s. 6d. net. Allen and Unwin.)

On page 88 this book quotes an obscure passage with the question, "What is to be understood by the following remarks?" Many passages in the text could be legitimately subjected to the same treatment. The subject notoriously lends itself to obscurity, but the bewildered reader does feel that he is entitled to a little more guidance than he gets here. He is left under the humiliating impression that he ought to get a great deal more from the book than appears on the surface. The illustrations are admirable, if we were only informed definitely what they illustrate. The thesis of the book is that Aesthetics is based on Equilibrium and Harmony. The text is taken from the Chung Yung as follows: My master, the celebrated Chang, says: "Having no leanings is called Chung, admitting of no change is called Yung; Yung is the fixed principle regarding everything under heaven." From this the reader is encouraged to find his way to the final satisfaction of synaesthesia.

The Cambridge Medical Series.—*Instinct and the Unconscious.* By Dr. W. H. R. RIVERS. Second Edition. (16s. net. Cambridge University Press.)

On publication the first edition of this valuable work was reviewed most favourably in these columns. We are glad to note that the merits of the book have been so widely recognized that a second edition has been so soon demanded. There is very little change in the text, the only point of any importance being a slight modification of the author's views on dissociation, caused by criticisms made by Dr. T. W. Mitchell. To the six appendices of the first edition have been added other two: *Psychology of the War*, and *The Instinct of Acquisition*. The former does not add much to the valuable contributions its author has made on this subject; the latter is an excellent bit of work.

RELIGIOUS KNOWLEDGE.

Catholic Scripture Manuals: The Gospel according to St. Matthew. With Introduction and Annotations by Madame CECILIA. Second Edition. Complete in One Volume. (5s. net. Burns, Oates.)

Madame Cecilia's volume is a full and carefully prepared manual, very well adapted for its special purpose. The authoress explains that "it has been compiled in the hope that it may be useful in preparing young Catholics for the University Local Examinations," and also for the use of "Catholic teachers in general." The work is divided into two parts, the first of which contains 494 pages, and is devoted to an Introduction (70 pages), followed by the text (Latin and English), with notes. The second part, embracing 287 pages, is devoted to a series of "additional notes," dealing with special points, like the Genealogy, Jewish Parties, the Jewish Calendar, &c. The whole volume, admirably printed and produced, is a marvel of cheapness.

The Prophets of the Old Testament and Their Message.

By Rev. Canon V. F. STORR. (2s. 6d. net. S.P.C.K.)

This little book is warmly to be commended to teachers. The author describes it as "Notes for Lessons on the Prophets," which were originally drawn up "in connexion with the new syllabus of Religious Instruction for Elementary Schools in the Diocese of Winchester." But the book can be used independently. It contains three courses of lessons, all dealing with the prophets.

and bringing out various aspects of the prophetic teaching and methods. For instance, one section has the following headings ("The Prophet and True Religion"): "(a) God, One and Holy, (b) God, Ruler of History, (c) The Outward and Inward in Religion, (d) Modern Sins. For 'Samaria' in Amos read 'London.'" Nothing is more urgent at the present time in religious instruction than that the prophets of the Old Testament should be given their rightful place. Canon Storr's little volume will be of real service for this work. We wish the price could have been 1s. instead of 2s. 6d.

BOOKS OF THE MONTH.

NEW BOOKS FROM HARRAP'S LIST

ENGLISH BOOKS

All Teachers should make a point of examining thoroughly Mr. Pritchard's three books. They are class text-books of the latest type, and mark an epoch in the new teaching of English, conforming closely to the Government Commission's Report on "The Teaching of English in England."

TRAINING IN LITERARY APPRECIATION.

By F. H. PRITCHARD, Author of "English Extracts and Exercises." Crown 8vo, 208 pages, 2s. 6d.

This volume is a practical guide to just taste in the best books. The publishers are confident that this work will be found as stimulating and practical as Mr. Pritchard's first two books:—

ENGLISH EXTRACTS AND EXERCISES.

Fifth Impression. Crown 8vo, 240 pages, 2s. 6d.

STUDIES IN LITERATURE.

Third Impression. Crown 8vo, 208 pages, 2s. 6d.

A PRACTICAL TRAINING IN ENGLISH.

By H. A. KELLOW, M.A. Revised and Enlarged Edition. "I congratulate you cordially on producing a most creditable working text-book, full of sound common sense, and showing a keen appreciation of the needs of the classroom."

PROF. JOHN ADAMS, M.A., B.Sc.

A YEAR'S WORK IN ENGLISH.

By J. W. MARRIOTT. Second Impression, 176 pages, 2s. 3d. This book is intended for pupils from twelve to seventeen years old. The work is divided into forty weeks, each of which contains (a) material for thinking exercises, including tests of intelligence and ingenuity; (b) opportunity for self-expression, imaginative effort, and original experiment; (c) an introduction to some great author or masterpiece of literature.

READINGS FROM RUSKIN.

Selected and Edited by SUSAN CUNNINGTON. With Memoir and Notes. Crown 8vo, boards, 156 pages, 2s.

READINGS FROM THE BIBLE.

Chosen from the Authorized Version for school use by B. L. K. HENDERSON, M.A., D.Lit., and F. G. RUSSELL, M.A., Mus.Bac., Haberdashers' School, Hampstead. 192 pages, 2s. This book closely follows the recommendations in the Report of the Departmental Committee, 1921.

TOLD THROUGH THE AGES. 2s. 6d. NEW VOLUMES.

- 46. STORIES OF THE SAINTS. By GRACE HALL.
- 47. THE STORY OF ST. ELIZABETH OF HUNGARY.
- 48. IN FEUDAL TIMES. By E. M. TAPPAN, Ph.D.
- 49. THE HIGH DEEDS OF FINN.

ALL-TIME TALES. 1s. NEW VOLUMES.

- 18. NATURE STORIES. By H. WADDINGHAM SEERS.
- 19. LEGENDS OF THE STARS. By MARY PROCTOR.

ECONOMICS

FIRST PRINCIPLES OF POLITICAL ECONOMY.

By Prof. CHARLES GIDE

Authorized Translation by ERNEST F. ROW, B.Sc.

Crown 8vo, 208 pages, 2s. 6d. This work by one of the greatest living authorities on the subject is written in very simple language.

MATHEMATICS

INTRODUCTION TO MATHEMATICAL ANALYSIS.

By F. Z. GRIFFIN, Ph.D.

10s. 6d. net.

544 pages, with Answers & Index.

FUNDAMENTALS OF HIGH SCHOOL MATHEMATICS.

A Text-book designed to follow Arithmetic. By Profs. H. O. RUGG and J. R. CLARK, Colombia University. Crown 8vo, 384 pp., 6s. net. Answers only, 1s. 6d. net.

HISTORY AND GEOGRAPHY

ILLUSTRATED EASY STORIES FROM ENGLISH HISTORY.

By LUCY DALE. With Four Plates in Colour and Line Illustrations. Small crown 8vo, 256 pages, 2s. 6d. Also in two Parts, each 1s. 6d.

THE BEGINNER'S HISTORY OF ENGLAND.

Second edition. By E. W. MILLER, B.A. With Maps and Illustrations. Small crown 8vo, 280 pages, 2s. 6d.

This volume is designed to follow the study of history in story form.

A SHORT SOCIAL AND POLITICAL HISTORY OF BRITAIN.

By ROBERT L. MACKIE, M.A. Fully Illustrated. Crown 8vo. Second edition. With new Synopsis. In two Parts, each 2s. 6d.; or Complete, 440 pages, 4s. 6d.

THE BEGINNERS' ANCIENT HISTORY.

By J. B. NEWMAN, M.A. Illustrated. Crown 8vo, 176 pages, 2s. 3d. This is an attractively written account of the Ancient World from the earliest days of Egypt and Assyria down to A.D. 1000.

THE BEGINNERS' MODERN HISTORY

By J. B. NEWMAN, M.A. Illustrated. Crown 8vo, 160 pages, 2s. 3d. From the year A.D. 1000 to the present time.

THE EARTH AND ITS LIFE.

By A. W. SEERS, M.A. A short graphic story of the origin of our planet and of prehistoric man. With 80 Illustrations. Crown 8vo, 208 pages, limp, 2s. 3d. Prize Edition, 3s. 6d. net.

THE HOME OF MAN

By W. C. BROWN, M.A., F.C.P., F.R.G.S., and P. H. JOHNSON, B.A.

NEW VOLUME.

VI. AUSTRALASIA, &c. About 128 pages, 2s.

FRENCH GERMAN SPANISH RUSSIAN ITALIAN

BILINGUAL SERIES

Descriptive Leaflet, post free, on application.

University Tutorial Press, Ltd.,

High Street, New Oxford Street, LONDON, W.C. 2.

LONDON HOSPITAL MEDICAL COLLEGE AND DENTAL SCHOOL.

THE Medical College and Dental School of the London Hospital are fully equipped to meet modern requirements. The various departments are under the direct control of University Professors and Lecturers, who devote their time entirely to work in their Department and who are assisted by a number of Demonstrators. The HOSPITAL contains 950 beds and is the largest General Hospital in England. Its position in the neighbourhood of the extensive docks, factories, and workshops of the East of London renders it for accidents one of the largest Hospitals in the World. The Wards, Out-patient, and Special Departments present a wide field for clinical instruction and afford exceptional opportunities for acquiring an extensive and practical knowledge of all phases of disease.

SCHOLARSHIPS AND PRIZES. Entrance Scholarships are offered in Science. An Entrance Scholarship is also offered in Anatomy and Physiology to students of the Universities of Oxford and Cambridge. Numerous Prizes are awarded in all subjects of the curricula.

FEES. MEDICAL COURSE. An Entrance Fee of 20 Guineas and an inclusive Annual Fee of 40 Guineas.

DENTAL COURSE. Four years' Course, a Fee of 200 Guineas; two years' Course, 100 Guineas; payable in equal annual instalments.

RESIDENT APPOINTMENTS are more numerous than at any other Hospital in the Kingdom.

RESEARCH FUNDS of over £26,000 give unrivalled facilities for Medical Research.

ATHLETICS, RESIDENCE, &c. A Clubs' Union with an Athletic Ground of thirteen acres, Students' Hostel on Hospital Grounds, College Dining Hall, &c.

(MEN STUDENTS ONLY ARE ELIGIBLE FOR ADMISSION.)

A Prospectus giving full particulars may be obtained from the Dean:

After the War Geography

We all know that the old standards have gone. The difficulty is where to find material upon which to build a new and accurate understanding of geography as Europe and, indeed, the World is to-day. It is new teaching, with a multitude of new factors, new boundaries, new racial problems and valuations.

All this information has been gathered up into a momentous volume just issued, in which every chapter is teeming with facts and figures, graphically reinforced by illuminating cartograms, maps, and every device to explain.

The book tells you in painstaking, accurate detail, both by text and maps, by diagrams and cartograms, by the revelation of inner knowledge of Treaties and understandings, and by acute perception of the personalities of all those high strategists of progress who "run" the world.

This book makes clear the effect of the changes that have been made in the Map of the World.

THE NEW WORLD

BY

DR. I. BOWMAN,

Director of the American Geographical Society and Chief Territorial Adviser of the Commission, Paris Conference.

Gives in one volume all there is to be known about the problems of every country affected by the Peace Treaties and Agreements, and shows how these problems are being solved.

The exact position as it is to-day in—

PORTUGAL.	CZECHO-
ALBANIA.	SLOVAKIA.
ROUMANIA.	BALTIC STATES.
HOLLAND.	CHINA.
GREECE.	PERSIA.
BULGARIA.	GREAT BRITAIN.
PALESTINE.	LATVIA.
ANATOLIA.	GERMANY.
RUSSIA.	ESTHONIA.
FAR EAST.	FRANCE.
TRAN-CAUCASIA.	POLAND.
AFRICA.	LITHUANIA.
U.S.A.	FINLAND.
AUSTRALIA.	SPAIN.
LATIN-AMERICA.	JUGO-SLAVIA.
INNER-ASIA.	DENMARK.
TURKEY.	AUSTRIA.
LIBERIA.	HUNGARY.
KOREA.	SCANDINAVIA.
INDIA.	ITALY.
ARABIAN	SWITZERLAND.
SPHERES.	BELGIUM.
JAPAN.	

The Schoolmaster says:

"The book is intensely practical. By providing such admirable maps, and so many of them, Dr. Bowman has rendered a real service to teachers, and the book will also be very valuable to private students of foreign affairs. It is impartial, yet propagandist, and authoritative, yet open-minded. It sets forth the countless problems of local and national interest now troubling the continents and the great islands with succinctness, and fairly."

The Daily Chronicle says:—

"The author passes the whole world under survey, and manages to squeeze into the chapters more facts about the post-war world than one has ever seen within the compass of a single book."

The Times Literary Supplement says:

"The author writes as a geographer and not as an historian. He surveys disputed areas, examines burning questions, considers changes of frontier, and details the ambitions of peoples with dispassionate care. In the illustration of his book with so many and such admirable maps, which provide valuable facilities for the study of current affairs. Dr. Bowman has done a real service to his generation."

THE FREE BOOKLET

has a full consideration of this vital subject, describes the book in detail, has extract from text, shows mapping scheme, and tells how teachers and educationalists can obtain the work at once, but paying later by convenient periodical payments.

Nature Topics

No finer means of direct teaching, without hours of preparation, exists than in the Revised 1922 Edition of "The Nature Book." It has been compiled with the aid of many of the most eminent authors and artists, such as J. McWhirter, R.A., A.R.S.A., Walter Crane, R.W.S., Dr. William J. S. Lockyear, F.R.A.S., &c., and the teachers' point of view has been kept steadily in mind throughout.

The Nature Book gives insight as to the ways and wonders of Nature, yet conveys its valuable scientific knowledge in simple, understandable, but graphic language, and by means of an unparalleled wealth of unique illustrations in colour and black and white.

A very valuable booklet for Teachers has been produced giving full particulars of the Waverley Nature Book and is offered below FREE.

THE WAVERLEY NATURE BOOK

In no other work will so wide a range of information of real value be found; the work contains everything necessary for lessons in every Branch of Nature Study—Botany, Physical Geography, Biology, Zoology, Meteorology, Ornithology, Entomology, Conchology, Geology, Piscatology, &c., &c. Every teacher who possesses this work will be able to impart a living interest into his Nature Study Lessons.

This Work has

36 EXQUISITE COLOURED PLATES.

24 BLACKBOARD LESSONS.

1,000 DELIGHTFUL BLACK & WHITE ILLUSTRATIONS.

Whatever particular branch of Nature Study is contained in the curriculum, it will be found in ready-made lessons in appropriate sequence, each clear-cut, fascinating, and full of teaching points, all set forth in an amplitude of satisfying descriptions by acknowledged experts.

For personal reading and study, the Nature Book leads to a fuller understanding of all life, and it is all related in happy, interesting style that never tires.

FREE BOOKLET

SEND TO-DAY FOR THIS.

It has many free lessons, a complete Syllabus, Blackboard Designs in Nature Study, and other teaching material on 1922 lines. Learn too how to get the work at once, paying by instalments.

THE NEW HUDSON SHAKESPEARE

"THIS FAIR
PAPER,
THIS MOST
GOODLY
BOOK."

Malcolm prince of Cumberland, as it were
thereby to appoint him his successor in the king-

dom, he receiveth the intelligence of the kingdom
according to the accustomed manner.

The bodie of Duncane was firste conveyed
into Elgine, and there buried in kingly wise,
the bones of king Duncane, for fear of que-
lles (whiche they might well knowe to be)

"BUT NOW
HER PRICE
IS
FALLEN."

(Illustration from *Macbeth*, New Hudson Edition. After Holinshed's *Chronicles*, First Edition.)

With Introduction and Notes by HENRY NORMAN HUDSON, LL.D. Edited and Revised by E. C. BLACK, Ph.D., Glasgow, with the co-operation of A. J. GEORGE. Each Volume 2s. 6d. net. (Reduced Price.)

An edition which combines scholarly editorial matter with attractive binding and type. The introduction to each volume contains a history of the play, a discussion of the sources of the plot, paragraphs on versification and diction, and sketches of the principal characters. The text is based upon the first folio, while variant readings of subsequent editions, together with textual and literary notes, are given at the foot of each page.

The volumes are artistically bound in blue flexible cloth, contain in each case an authentic facsimile of a page from quarto, folio, or source book, and possess that attractive appearance which goes so far towards recommending a book to a young student.

The following volumes are now ready :

AS YOU LIKE IT.
CORIOLANUS.
HAMLET.
HENRY V.
JULIUS CAESAR.

KING JOHN.
KING LEAR.
MACBETH.
MERCHANT OF VENICE.
MIDSUMMER NIGHT'S DREAM.
MUCH ADO ABOUT NOTHING.

RICHARD II.
RICHARD III.
ROMEO AND JULIET.
THE TEMPEST.
TWELFTH NIGHT.

(An illustrated prospectus will be forwarded on application.)

THE STANDARD ENGLISH CLASSICS SERIES

While not encumbered with editorial matter, each volume in this Series contains Notes and Introductory material. The latter includes a biography of the author and other information designed to help the student to form a critical estimate of the classic as a work of art, and to appreciate the reason for the place in literature which has been assigned to the book and its writer.

The following is a selection of the volumes in the Series. A complete list will be sent on application :—

Their Complete Educational List can be had, post free, on application.

FRENCH.

By A. R. FLORIAN,
Head Master of the Priory School, Shrewsbury.
ELEMENTARY FRENCH READING BOOK. Crown 8vo. 2s. 9d.

This book of Easy French Stories is intended for beginners who have done some little preliminary work in Pronunciation and Grammar, and may be used as a supplement to any beginners' book such as the authors' First French Course. The pieces are graded, Tenses are introduced one at a time, and care has been taken both to limit the Vocabulary and confine it to Common Words. Repetition of words and phrases has been freely employed, and in a few cases the same story has been made to do duty more than once, even if in a slightly different guise. It is hoped that the pieces will be found interesting, but the chief aim has been simplicity.

INTRODUCTION TO FRENCH PROSE COMPOSITION.
Crown 8vo. 3s.

Divided into grammatical sections with full explanations, and introducing the beginner almost at once to Continuous Prose Translation, the book provides a thorough grounding in Composition up to the standard of Matriculation or the First Approved Examination. Some general Prose Passages, a full Vocabulary, and an Appendix of Irregular Verbs are included.

PROGRESSIVE FRENCH COMPOSITION FOR MIDDLE FORMS.

By C. L. A. BONNE and E. F. HORSLEY, French Masters at Bradford Grammar School. Crown 8vo. 3s. 6d.

The book provides a progressive Course of French Syntax, suitable for pupils who have reached the stage when they are ready to begin French Composition. It is arranged so that it may be worked through twice in successive years, the sectional revision exercises providing ample material for School Certificate and Matriculation Forms. Each of the thirty Lessons deals with one topic, and is followed by short sentences for rapid oral work, longer sentences for written work, and two interesting pieces of prose, introducing the Lesson-matter copiously and avoiding constructions which form the subject of subsequent Lessons.

The Revision Exercises occur after each set of five lessons and consist of a number of prose compositions based largely on the preceding section. Exercises on Free Composition, relating to the subjects of the Proses, are also included. Idioms are given in the Sectional Vocabularies.

The main ideas embodied are definite progression from one topic to another, and Continuous Revision of construction and vocabulary.

SENTENCES FOR TRANSLATION INTO FRENCH, ILLUSTRATING GRAMMATICAL RULES.

With Vocabulary. For Middle and Upper Forms. By A. W. STREET and ARNOLD LEE, Modern Language Masters in King Edward's High School, Birmingham. 3s.

CONTENTS: Adjectives: Their position and comparison—Adverbs—Pronouns—Agreement of Past Participle—Relative and other Verbs—Use and omission of the Articles—Use of *devoir*—Subjunctives—Verbs—Prepositions—Uses of Tenses—Inversion of Subject—Comparative Sentences—Active Voice in French for English passive—Verbs followed by a Preposition—Miscellaneous Sentences—Vocabulary.

EXERCISES IN FRENCH FREE COMPOSITION.

By C. L. ALBERT BONNE, French Master at Bradford Grammar School. 3s. 6d.

CONTENTS: 50 Preparatory Exercises in French, 55 Pieces in French, and Free Composition Exercises or Themes, some English Pieces, and Subjects for Composition.

HISTORY.

A CLASS BOOK OF THE BRITISH COMMONWEALTH.

With Coloured Maps, Plans, Summaries of Laws, Parliament, Military Forces, Justices of the Peace, Religious Bodies, Genealogies, Chronologies, and Special Subjects. By A. D. INNES. Crown 8vo. In Three Volumes.

The work is of wider scope, and therefore of greater length, than the usual School Histories: (1) Every period opens with a comparatively full outline of the movements of European History to which British History is related. (2) It gives unusual and constantly increasing space, especially in Vol. III, to the developments in the Dominions beyond the seas which we must regard no longer as merely adjuncts of England or even as Provinces of our Empire, but as members of the British Commonwealth. It treats with explanatory fullness of economic and social as well as Constitutional developments, in the hope of making them more interesting as well as more intelligible than young students usually find them.

Vol. I. Early Days to 1485. 4s. 6d.

CONTENTS: Early Days—The English Kingdom: 800 to 1066—The Conquest and the Normans—The Shaping of England—The English and Scottish Nations—National Growth—The House of Lancaster—The Passing of the Middle Ages.

Vol. II. 1461 to 1714. 4s. 6d.

CONTENTS: The Passing of the Middle Ages—The Reformation—The Age of Elizabeth—The Right Divine—The Puritan Revolution—The Restoration—The Whig Revolution.

Vol. III. 1714 to 1920. 5s.

CONTENTS: Whig Triumph—Seven Years' War—America—India—The Eighteenth Century—The French War, 1789-1815—Reconstruction—1832-1852—Recent History.

MAIN CURRENTS IN WORLD HISTORY. For Students at Schools and the Universities, who are beginning to specialize in History.

By L. CECIL SMITH, Modern History Master at St. Paul's School. Author of *British History*. Crown 8vo. 8s. 6d.

"I have taken as my connecting link the development and expansion of modern Western civilization, which I trace from three sources: Oriental religions, culminating in Christianity, classical Politics, Law and Art, and modern Inventions. Accordingly I do not profess to write a detailed history of the Ancient or Medieval world. I content myself with a summary of 'Ancient' and 'Medieval' History, attempting to emphasize just those elements which are still affecting our lives and human society to-day. In the more modern chapters I have allowed myself more scope. In fact, this is an outline of Modern History with summaries of those past ages to which it owes its origins."—*Extract from Preface.*

CONTENTS: Primitive man and the Ancient World—The Medieval World—Renaissance, Reformation, and Geographical Discoveries—The Age of Louis XIV—The Balance of Power and the Expansion of Europe—Constitutional History—War and Peace Congresses, 1792 to 1830—The Modern State—The Extension of Western Civilization—The Development of New Powers in Europe—The Great War and the Settlement.

NOTES ON BRITISH HISTORY.

By WILLIAM EDWARDS, Head Master of the Middlesbrough High School.

Part I.—Prehistoric Times—1485, 3s.

Part II.—1485—1600, 3s.

Vol. I (Parts I and II), 5s. 6d.

Part III.—1600—1783, 3s.

Part IV.—1783—1901, 5s.

Vol. II (Parts III and IV), 7s. 6d.

Parts I to IV, complete. 12s. 6d.

MATHEMATICS.

By W. G. BORCHARDT.

COMMERCIAL ARITHMETIC.

With or without answers, 3s. 6d.

This volume is based on the Board of Education Circular 1116, on the First Year's Course of *Commercial Instruction* in Evening Schools.

It assumes that the student has had previous training in Arithmetic, but at the same time thoroughly revises all the more important and fundamental parts of the subject.

Stress is laid on rough checks, accuracy, and short methods of calculation suitable for business work.

Included in the book are sections on Invoices, Sales and Purchases Books, Cheques, Cash Book, Insurance, Brokerage and Commission.

The examples have been made as concrete as possible and Revision Papers are given at the end of the volume.

SCHOOL STATICS.

With or without answers, 7s. 6d.

The examples are mainly numerical, the book-work simple, and easy experiments are suggested. The sections on Moments and the Lever are taken first, and the Parallelogram and Triangle of Forces before Machines. Extra Laboratory Experiments and a set of graduated Test Papers are given at the end of the book.

The earlier chapters are suitable for beginners, while the later ones are sufficient for the Higher Mathematics for entrance to Woolwich and Sandhurst and for the Senior Cambridge Local Examination.

SCHOOL DYNAMICS.

With or without answers. In one vol. 7s. 6d., or in two parts, with or without answers, 4s. each.

Part I will be found sufficient for such examinations as the Cambridge Junior Local, while Part II includes all that is necessary for the Cambridge Senior Local, the Higher Mathematics for entrance to Woolwich, and other similar examinations.

The book-work is illustrated by simple experiments, while velocity and acceleration are studied with the help of graphs and Fletcher's trolley.

In Part I the author has not hesitated to introduce simple standard formulae, and though in dealing with Forces, absolute units have been employed, in most cases the magnitudes are eventually given in gravitational units.

Part II includes the graphical representation of Work and the solution of problems by the Principle of Work, and chapters are given on Simple Harmonic Motion and Rotating Bodies.

PLANE GEOMETRY FOR SCHOOLS

By T. A. BECKETT, M.A., and F. E. ROBINSON, M.A., Mathematical Masters at St. Paul's School.

In Two Parts, with or without Answers. 5s. each.

CONTENTS: Part I. Straight lines, angles, triangles, parallelograms, circles, areas, Pythagoras's theorem and constructions arising therefrom, co-ordinates, and easy trigonometry. With numerous examples.

CONTENTS: Part II. Harder properties of areas, extension of Pythagoras's theorem, rectangle properties of the circle, radical axis, propositions on inequalities, maxima and minima, and regular polygons, ratio and proportion. With numerous examples.

ELEMENTARY CALCULUS.

With numerous Diagrams. By C. H. P. MAYO, M.A., formerly Senior Mathematical Master at Harrow School. 10s.

RIVINGTONS: 34 KING STREET, COVENT GARDEN, LONDON, W.C.2

OCCASIONAL NOTES.

THE second reading of the Superannuation Bill, 1922, was adjourned in order that a Select Committee of the House might consider and report upon the question whether any undertaking by the Government or Parliament was given or implied that the provisions of the 1918 Act should not be altered while

**Pensions and
the Select
Committee.**

the Burnham Scales remained in force. This Committee consisting of nine members did its work very thoroughly, no less than seven of these members attending all five sittings, an eighth, Mr. Rhys Davies, attending four, and the ninth, Colonel Hurst, the last two only. The first and last meetings were deliberative, at the second and third evidence was taken from representatives of the teachers, and at the fourth from Viscount Burnham, Mr. Fisher, Mr. F. J. Leslie, and Sir Cyril Cobb. At the final meeting the chairman, Mr. Acland, proposed a draft report, the essential feature of which was the sentence: 'We are bound to find that an undertaking was implied.' The Committee, however, divided upon the paragraph containing this sentence, three members, Messrs. Davies, Joynson-Hicks, and Spoor voting for, and four, Messrs. Grant, Gregory, Hume-Williams, and Colonel Hurst against. Colonel Stephenson did not vote, though he had been present at all the sittings. A new paragraph, stating that "No undertaking, either express or implied" was given by the Government or Parliament, was then drafted and passed. In view of the somewhat narrow terms of reference of the Committee, of opinions given by Viscount Burnham, in his evidence, that a forced contribution would be "from the point of view of morals a little shabby," and that "during the currency of the

Scales," it would "admittedly be a breach of faith," which would "partake of the nature of sharp practice," and of a close analysis of the nature of the final voting, most teachers thought it probable that the Government would not press the Bill further.

THE Bill could reasonably be opposed on the ground that the proposed levy is *not* a contribution to a carefully thought out contributory pension scheme including, as such a scheme should, provision for contractual obligations, the redress of the inequalities and anomalies inherent in the 1918 Act, and some share by those affected in its control. In fact, the levy is held to be simply an appropriation from salaries, in aid of taxation, which is being applied to one, special section only of the nation. Moreover, it is not even being applied to all that section, since there is no proposal to place other public servants' superannuation schemes on a contributory basis. The Government has promised to set up a Departmental Committee to consider the Superannuation Act of 1918; it is clearly the business of this Committee, first to consider very carefully whether the advantages of a genuine contributory pension scheme do really outweigh the disadvantages, and, then, if it comes to the conclusion that they do, to frame amendments to the 1918 Act—or possibly a new Act—with this end in view. The contention of the Government, that a saving must be made in educational expenditure at the expense of the teachers, seems indefensible; for it ought to have considered its commitments under the Superannuation Act of 1918 at the time when its commitments under the Burnham Scales were under consideration. To proceed with the present Bill appeared to constitute an indictment of the Government for want of ordinary business capacity. However, on June 15 the Prime Minister stated in the House that the Government had decided to press forward with the second reading. The teachers therefore had the opportunity of reconsidering their position. As there was a considerable body of opinion that it was desirable to refrain from further opposition to the second reading, it was decided merely to ensure that a clear statement of the teachers' position should be made during the reading.

AN Economy Campaign usually involves an attack upon officials and administrators, their number and their remuneration. The Select Committee on Estimates have passed in review the expenses of the Board of Education, and it might be assumed from the scare headlines of the daily press that the Board is guilty of gross extravagance. In all but a few details, however, little exception can be taken to their record. The number of the "Higher" staff is the same as in 1913-14, and if their emoluments are some £38,000 more than in that year, it is not an excessive addition, and is presumably largely due to the war bonus provided by the Government for all Civil Servants. The executive and clerical staff has increased, and as the bonus was, quite properly, substantial for the lower paid branches of the service, the cost has considerably increased. The substitution of the percentage system for fixed grants demands a much larger clerical staff, and until the system is altered, the staff will be required. As Inspectors may be classified as desirable rather than essential, the wisdom of

**The Board's
Administration.**

increasing the staff of women Inspectors by nine since last year may be doubted, and the Select Committee's observations regarding their salaries and that paid to the Chief Medical Officer are, we think, justified. We note that the President of the Board attended before the Committee and referred to the increase in teachers' salaries. He might have added that this increase must influence the salaries paid to Inspectors and other officials employed in the service of education.

THERE is much to be done, and many changes to be made, before the financial relations between the Board of Education and the Local Authorities will be satisfactorily adjusted. Some method

Circular 1298.

will have to be devised under which the Government, while bearing an equitable proportion of what must be an increasing burden, does not impose upon the Authorities the vexatious obligation of obtaining approval for every detail of expenditure. The circular relating to grants for Higher Education to Local Education Authorities does not affect the main issue, but it may, and it is hoped it will, tend to reduce the number of detailed claims and returns now required. The existing grants for Higher Education (so far as they are payable to Local Education Authorities), now administered under various regulations, are to be withdrawn and a single comprehensive grant substituted. This grant will include the residue grant and amount to one-half of the Authority's expenditure recognized by the Board as expenditure in aid of which Parliamentary grants may be made. It is provided that to any area in which the grants payable in the year 1921-22 exceeded 50 per cent the Board will pay, for the current year, only a grant bearing the same proportion to the net expenditure of that year as the grant normally payable in 1921-22 bears to the net expenditure of that year. The inevitable regulations will be issued in due course and will include certain provisions already published under which it is proposed to gradually extinguish duplication of State aid in respect of Secondary Schools and other institutions not provided by Local Education Authorities.

THE Empire Settlement Act, recently passed, is intended as part of a scheme which must be completed by our trans-oceanic brethren for renewing

Colonial Expansion.

the flow of emigration from this country that was so large a feature in the history of our possessions fifty years ago. The occasion is one which reminds us of Colonial expansion in the past history of Europe; the Hellenes, from their peninsular home, sent out many colonies to all parts of the Mediterranean from Asia Minor in the east to Spain in the west. These colonies were the children of the cities, their metropolises, they were organized as religious and commercial daughters of their original home; the tie was often slight and quarrels were not unknown, but the whole movement made the Hellenes rivals in the "Great Sea" to the Phœnician colonies from Tyre and Sidon. Hellenic colonization was thus very similar to English and differed entirely from the "Colonies" (*coloniae*) of Rome into whose empire the whole of the Hellenic world was finally absorbed. These were settlements of Romans in cities to which special privileges were granted and which formed centres of Roman power throughout the empire.

With the "fall of Rome" in the west, and the growth of new states in Europe, colonization ceased for centuries; when the Mohammedan powers barred the overland way to India, Portugal began that series of navigations toward the south which finally led her round the Cape of Good Hope to the shores of India, but her achievements were for trading purposes only, like the later work of Dutch and English merchants, and it was Spain that, with the accidental discovery of America by Christopher Columbus, began to colonize in Central and South America, by methods far different from those of Hellas, but leading to the formation of subject communities.

IT was in rivalry to this, the colonial growth of Spain, that Englishmen began, in the seventeenth century, to colonize the northern coasts of America, and, largely

Empire Settlement.

for commercial purposes, but also partly for religious reasons, founded the original thirteen colonies which later have grown into the United States of America. The Dutch also founded colonies in North America, but the chief rival of England there was France, with her trading posts and missionary efforts, and the conflict that arose out of that rivalry in the eighteenth century is well known to all. When the conquest of French Canada led to the revolt of our own colonies, Captain Cook began to discover Australasia, and after the Napoleonic struggle (during which we acquired the beginnings of South Africa), Canada, Australia and New Zealand began that career as British colonies which has given us to-day a far extending empire in which the word "colony" has been dropped and Greater Britain consists of daughter States, equals in many respects of the mother country. Since the Great War, however, there has arisen a growing feeling that the Dominions and Commonwealths which are a large part of the British Empire are not sufficiently stocked with men and women of the British race; with the development of new possibilities in the Pacific, it is being gradually realized that Australia, and to a large extent New Zealand, is comparatively an empty continent. This opinion has resulted in the welcome Empire Settlement Act, which will give the opportunity to many intending colonists to realize their desires; indeed the Premier of Western Australia has already arranged to take 25,000 British subjects every year to the south-western portion of his country.

INTERESTING experiments are being made in Germany with a new method of teaching history in higher classes in schools. Synoptic history-tables

New Method of Teaching History.

(Synoptische Geschichtstabellen) have been set up, under the editorship of Dr. Siegfried Kawerau, of Charlottenburg, himself a teacher of history, in which the contemporaneous facts and events in economic development, social conditions, five departments of mental life (religion, science, literature, art, education), internal constitution and foreign policy of the principal countries, are presented side by side in parallel columns. While the teacher deals with his subject matter, he and his pupils will have this work open before them. They will be able not only to make comparisons, but also by thought to make deductions, and to perceive the inward and functional interdependence of the various phenomena. Since the facts are to speak for themselves,

their presentation is in a form, at once comprehensive and objective, which is simply impossible to a continuous narrative. The old method of teaching history, principally as political, acted as an incentive to war, for none but students and statesmen knew the causes and prevention of war; the school-boy had no means of building up his historical knowledge on a sociological basis, and could not recognize war as the catastrophic snapping of economic-social tension; his memory and not his reason was exercised. This new training should obviate these defects; its possible value for a real democracy will be quickly recognized.

THE problems of vocational psychology have recently aroused great interest in this country. At a meeting held at the Mansion House towards the end of March, Viscount Haldane spoke strongly in favour of the application of psychology to industry as one of the most scientific

Vocational Psychology.

methods of dealing with the present industrial unrest, and of repairing the injuries to the economic position of the country consequent upon the war. In a series of official reports published by the Industrial Fatigue Research Board, Prof. Muscio and others have reviewed the whole literature of the subject, and have described investigations of their own dealing with the selection of suitable employees for such trades as printing and the manufacturing of confectionery. Dr. C. S. Myers has given up his post at the Cambridge Psychological Laboratory to become Director of the new National Institute of Industrial Psychology. Under his guidance investigations are proceeding in a Lancashire colliery, in a London firm of caterers, and in various other factories. The Institute makes grants to research students at universities, and, as soon as the necessary funds allow, proposes to establish a separate section for vocational guidance and selection. Mr. Cyril Burt, Psychologist to the London County Council, has recently published a description of tests for clerical occupation, such as shorthand and typewriting; with other workers, he is now engaged in some of the trade schools and technical institutes under the Council upon the construction of tests for accountancy, dressmaking, engineering, and other technical trades; and, in conjunction with the National Institute, the Industrial Fatigue Research Board, and the labour exchanges he is conducting a test-experiment in vocational guidance with a representative batch of children about to leave selected elementary schools.

ONE of the best and most unbiased surveys of the whole subject is that published in the current number of "The International Labour Review," by M. E. Gauthier, Director of the Regional Employment Office under the Ministry of Labour at Paris.

Selection and Guidance.

He reviews the progress made throughout the world in vocational guidance and selection, and describes the chief methods employed. He considers—and here he is only echoing the views voiced by experts at the Congress of Industrial Psychology held at Barcelona last year—that vocational selection has now passed beyond the experimental stage. He lays down the following aim as formulated by the French Ministry of Labour: "the best distribution of human values among the various types of industrial activity." The school alone, and the psychologist alone, he argues,

can no longer deal with the whole problem. They must collaborate, not only with each other and with the medical inspectors and social workers, but also with the employment bureaux and the labour exchanges, and thus review all the many-sided qualifications of the employee, and all the varying needs of the employment market. He insists strongly that, in the interests of the community as a whole, vocational selection in the narrower sense is not sufficient, it must be supplemented by vocational guidance. It is not enough for each special firm simply to select the most suitable employees upon the lines most profitable to it. The State or the municipality, working either through the school or through the labour exchanges, must do the best for each child, at the critical moment when he ceases to be a pupil and becomes a worker, by finding for him the occupation most fitted to his physique, his general intelligence and his special aptitudes, his character and temperament, and his general social circumstances.

A FEW months ago we commented upon a discussion, in which men and women of high academic standing took part, upon the alleged disappointingly small output of women, reckoned in terms of original research. After all allowance had been made for circumstances peculiar to women, there seemed by common consent to be some justice in the allegation, and the question naturally arose whether the pioneers in the higher education of girls and women had been altogether right in imitating the systems which had been slowly devised for boys and men. In the very able presidential address of Miss Fanner, before the Association of Head Mistresses, we seem to discern a fresh and constructive way of approaching this intensely interesting problem. "The strength of woman," says Miss Fanner, "lies not in the control of the physical environment, but in the understanding of persons, and for this reason her chief interest has always been in the humanities, while among the sciences it is the laws of biology and of psychology which she most needs to understand and apply." Again, "aesthetics and crafts are for her of equal importance with the humanities and the sciences," and in the study of art and music we are concerned not chiefly with technique but with appreciation. It is no disloyalty to the pioneers, but rather in the very spirit of progress for which they stood, if we find that we have to revise our inherited conceptions of the educational ideals appropriate to women. Such utterances as that of Miss Fanner are both significant and helpful.

The Education of Girls and Women.

THOSE who drew up the agenda for the Conference were evidently concerned, not only with curricula, but also with the effect on education of external compulsion which imposes on girls' schools unsuitable subjects, leaving out much of importance and forgetting that all taxpayers really have a right to use schools supported by public money. The head mistresses rightly invited expression of opinion on the withdrawal of scholarships for higher education with little or no notice. In the political world it seems allowable to repudiate anything that is to one's own hindrance. As the voting power of women will have considerable effect on the tone of politics, a discussion bordering on political ethics by head mistresses is of considerable public interest. We agree too that

Conference of Head Mistresses.

the effect of a free place examination common to an area is one that can only be justly considered by heads of schools concerned by the introduction of the system objected to, and it is well that all should hear their experience. It is an anomaly that free places should be awarded on a standard lower than that expected of fee payers. Still, schools are founded for all who can gain by attending them. Many profit by school or university who never obtain the school brand of the first examination or a B.A. degree. It is a matter for eternal debate whether free places should depend on merit and suitability or on merit and poverty. A member has just been declaring in the French Chamber: "Les enfants accéderaient d'un ordre d'études à un autre non pas selon leur situation sociale, mais selon leur intelligence." In England we suffer from the fact that those who help themselves by their own efforts are pushed aside by those who mean to rise by other people's efforts; so abuses creep in when selection appears to depend on financial need. The only solution seems to be: Free places for elementary children, bursaries for children already in secondary schools. Disapproval was expressed of the tendency to estimate suitability to profit from a school course by the probability of the pupil's attaining the standard of the first examination in due time. The idea that worth can be estimated by the potential passing of an arbitrary examination is on a par with ostracizing those who cannot actually pass it. A short time ago we were bent on cutting down examinations; they are now again becoming all powerful; they are the only facts Mr. Gradgrind can understand. It is not the clever alone that Education calls to her great supper.

Choice of Employment. IN accordance with the terms of Lord Chelmsford's report, Local Education Authorities have now the option of giving effect to the Education (Choice of Employment) Act, 1910, unfettered by the Ministry of Labour, provided they also undertake, on behalf of the Ministry, the administration of Unemployment Insurance in regard to young persons under eighteen years of age. Except on the ground that the reward for the fulfilment of one duty is supposed to confer the power to fulfil another, it is a little difficult to understand why the price of liberty in one direction should carry with it an obligation to discharge an alien function. The Ministry of Labour will of necessity retain all their machinery for the payment of Unemployment doles to persons over eighteen years of age so that additional cost must be incurred by Local Authorities if they deal with the payments to young persons. Consequently, it will not be surprising if a good many County Authorities decline to accept the proposals. They will probably be right in doing so, but we doubt whether they are equally well advised in protesting against the suggestion that if a County Authority stands aside, it should not be competent for what are termed "Part III Authorities," if they so desire, to discharge the duties.

The Teaching of Grammar. THE papers and speeches at the English Association's recent Conference on Grammar show how far we have travelled from the days when the teacher looked up to "Lindley Murray" almost as to an inspired Bible, accepted unquestioningly its rules, and imposed them rigidly upon his pupils. The grammar of a dead language

is, in a sense, a thing fixed. We can tabulate the practice of those who used it, and specify deviations from the norm. Yet even to a dead language the modern attitude has changed; we no longer look upon Thucydides as breaking rules of grammar because his sentences evade our classifications. We realize that the dead language was alive when he wrote, and that he moulded his expressions without being in the least subject to rules that as yet had not been formulated. Still more with a living language do we recognize the fluidity of grammar; the rule of to-day is simply a statement of current practice; it did not exist yesterday, it will not bind to-morrow. This is why it is desirable to confine the teaching of grammar in schools to the simplest elements. Prof. Mawer carried the argument a stage further when he showed that modern developments of analytical languages were opening up new possibilities of expression and that we were faced with the reconstruction of grammar. Till that reconstruction was accomplished, the teacher should hold his hand. But this only makes it more necessary, as Mr. Andrew ably urged, to be clear and definite about those simple rules of universal grammar which are a statement of laws based on the analysis of thought. Neglect of them in the school means slovenliness of thinking, haziness in comprehension of what is read, and sloppiness in composition.

What is Technical Education. IN his presidential address to the Association of Teachers in Technical Institutions, Mr. J. Paley Yorke ranged over a wide field, as is customary on such occasions. From the important topics he dealt with, we select for special emphasis the most fundamental of them all—the very meaning of technical education, as the term is now used, or as it ought to be used. Many years have elapsed since the last comprehensive inquiry was made, and many changes have taken place since then. It is not without significance that the old phrase technical *instruction*, implying more than a hint of a narrowly utilitarian aim, has by fairly common consent been replaced by the phrase technical *education*. The technical institute at its best is really part of our educational system. Its main concern, as Mr. Yorke remarks, is the connexion between science and industry, and if the industry, and the science which is brought to its assistance are rightly conceived of, we have here no poverty-stricken ideal. And if again, in the curriculum of the technical institute, this element of applied science is supplemented by a distinctively humanistic element, the result is a type of general education fitted to take its place beside other types. But the whole subject is so gravely misunderstood even by some whose business it is to know better, that we gladly support Mr. Yorke's appeal for a public inquiry.

Women Tutors and Celibacy. THE terms of appointment for a recently-advertised post of resident tutor at the Home Science Department, King's College, Campden Hill, lay down the unqualified condition that candidates "must be unmarried and not engaged to be married." What can be the significance of the special stress laid on the unsuitability for such a post of a married woman—perhaps one whose husband is abroad or dead—and, still more extraordinary, of an engaged woman? How, for instance,

should it be a disqualification to be engaged, if the further step of matrimony is not yet above the horizon? Is the tutor permitted—the advertisement is not explicit on the point—to contemplate marriage as a future possibility? The mystery deepens when we reflect that the post is in an institution where the art of home-making and the sciences relevant thereto are the chief preoccupation of staff and students. Are the latter as well as the former discouraged from contemplating the management of a home in the capacity of wives and mothers? Or are only professional women to be doomed to celibacy as an alternative to continuing the work for which they have been trained? The terms of the advertisement look like a revival of the “No followers” and Mrs. Grundy attitude to female employees that we had hoped no longer survived, at any rate in the University of London, which surely did not intend to put a ban upon marriage when it led the way in opening its degrees and teaching to women students, and, more recently, in establishing a degree in home science.

ONE wonders further how the presumable intentions of those who framed the terms of appointment in question can be carried out. Will the Resident Tutor be allowed a male caller (a privilege accorded, we believe, to her students)? Or will association with men, except in her official capacity, be entirely forbidden to her? For a caller might propose and be accepted, and the effect on the institution of such an event might be worse than the more unexciting existence of the Tutor's husband or betrothed. These questions may safely be left unanswered if only professional women will resolutely boycott an institution which pries so unjustifiably into the private and personal concerns of its employees. For this is a serious matter which touches all women workers. The insistence that they shall concentrate exclusively on their work, giving up their right to live a normal woman's life, with normal human interests and outlets, is as bad for them as it would be for their brothers. The obvious reservation of the special conditions attached to child-bearing in the woman's case must not be allowed to colour and influence the whole question of the relationship between her profession and her individual life. Lastly, the demand is one which in all the true interests of education must be resisted. A woman gives best service as a teacher when she is happiest in her human relationships, and as little as in the case of man, was she made to live alone. Nor need one be a Clemence Dane to be conscious of the existence of evils which are in part due to the fact that the education of girls is too exclusively under the “regiment” of single women.

TWO very interesting Reports dealing with Carnegie Trusts were recently published. One of these, the “Carnegie United Kingdom Trust,” is naturally, chiefly concerned with the library policy of the late Mr. Carnegie to whom we are so deeply indebted both for Libraries built and endowed and for the assistance which this Trust is still giving to local authorities in proceeding with Library schemes. The Report, however, makes it abundantly clear that we owe a debt of gratitude for good work quietly, but steadily performed in other directions. Music is fostered, for instance, both under a scheme by which the works of present-day

composers are adjudicated upon and their writers awarded financial assistance, and by means of rural concert schemes. The other Report is that of the “Carnegie Foundation for the advancement of teaching.” Medical and Legal Education, and the training of teachers, in Canada and the States, are dealt with in great detail and, what is of deep interest at the moment, nearly one third of the Report is devoted to a close, almost meticulous examination of pension schemes and pension legislation. Pension schemes in American Universities are of very recent institution and are almost all contributory, salary conditions having been previously fixed independent of the subsequent pension arrangements. Since they are, in most cases, of little value to older teachers the Trust grants retiring allowances to such of these as are deemed worthy of help. The Report includes an article on the Federated Universities Superannuation Scheme of England and Wales and contrasts the position with that established by the School Teachers' Superannuation Act of 1918, but concludes that the Act does not represent a final judgment on the matter.

EXPERIMENTAL INVESTIGATION IN EDUCATION.*

BY PROF. C. W. VALENTINE, M.A., D.Phil.

EVERY new movement has two types of enemies. There are those whose minds are closed to anything new, because it is new; but even more dangerous to the success of a movement and the consolidation of what is really good in it are those misguided enthusiasts who accept novel doctrines without due criticism: witness the attitude of some to psycho-analysis and more recently to auto-suggestion.

In the same way experimental work in education will not gain from such assertions as that made by a distinguished psychologist, that experimental psychology had now made it desirable to scrap the history of education as useless; or again, by a recent writer to the effect that the experimental investigator can proceed independently of practical experience in the schools.

With this warning against exaggerated claims, let us consider three broad types of investigation of educational problems.

1. There are the cases in which new methods are put to the test in school practice, as, for example, the Dalton plan, the Montessori method, or, on a wider scale, the direct method of teaching foreign languages.

These are experiments in the sense of being efforts to strike out along new lines, and they have the advantage of being in the closest touch with school work. But they fall short of being experiments in the scientific sense. For that we need a knowledge of all the conditions: the power to vary one, and only one, element of the whole at a time, and to observe the corresponding changes.

Experiments in school are too complex to admit of such exact manipulation. Nor can the results be treated as typical of what would inevitably follow the methods applied. We must bear in mind the following weaknesses of the experiments considered as tests for universal application.

First there is often a special selection of the teacher. So long as a method is unpopular it is usually the alert, open-minded teacher who has the courage to break away from tradition. When the movement becomes more fashionable, with a sign of being “up-to-date,” it may attract on the other hand the less intelligent or superficial teacher. This is no doubt the chief reason why a

* Based upon a paper read at the Bangor Conference of the Training College Association.

number of movements starting with promise give disappointing results when carried further; compare the results of the direct method of teaching Latin in the hands of experts at the Perse School with some results elsewhere.

Again an experiment may not be typical if there is a special selection of pupils. If a school trying new methods gains a reputation for the teaching of certain subjects, as, for example, Oundle in Mathematics and Biology, it may attract especially boys of exceptional ability in those subjects, and so its final results are not only the consequence of the method followed. Or if a school is of the type sometimes called a "crank" school, it will attract the children of cranks; and who knows whether this is an advantage or not to the particular methods of the school?

The selective factor certainly works in an adverse way as regards some new movements. Thus the classical side in the public schools has certainly tended to draw the ablest boys, backed until quite recently by the aid of the best scholarships and by the tradition that only duffers do modern subjects. Hence modern subjects have only recently begun to have anything like a fair test.

A further complexity is this: that the mere novelty of a method may attract for a time the interest of pupils, especially younger ones. On the other hand it may take some time to be mastered and for its value to be felt by older and more serious students. The unfamiliarity of the method to a teacher on whom it has been more or less forced is a grave handicap to the method concerned. A method will only yield its best results in the hands of a teacher who is enthusiastic about it, who has re-adapted some aspects of it to suit his own idiosyncrasies, who is a master of his method and not fettered by it.

In summing up this type of experimental investigation one might be tempted to parody a paradox of Bradley's and say that the experimental movement is the best of all movements in the educational world at present, but that every particular experiment in it is a failure. That, however, would be too strong: for these experiments are not merely investigations, they are the accomplishing of results, which in many cases are their own justification, however difficult it may be to analyse their causes.

Furthermore, as a new method is adopted and in more varied types of schools, every one of the above-mentioned weaknesses *qua* experiment is decreased: there is less and less likelihood of a special selection of teachers or of pupils, the effect of mere novelty wears off, and text-books more suitable to the method are produced.

2. Under the second main type of investigations I would include those inquiries which are on the border line between statistical inquiries and experiments proper; as, for example, the investigations as to norms in spelling or arithmetic, as to the correlation of school subjects, and the application of tests of intelligence or fatigue. Even when such inquiries are merely statistical, they are in a line with the spirit of experimental inquiry and may be even more valuable in supplying facts as bases for our educational thinking.

Some of such investigations require expert skill: the application of mental tests, for example, by teachers untrained for the work, cannot supply material on which we can rely for statistical purposes, though it may be of great interest for the teacher himself.

But some investigations in the group are of a type notable for their simplicity. Take, for example, an admirable inquiry made by the late Prof. J. A. Green, as to the nature of the private reading of evening school pupils. The students were asked to write down a list of what they had read the preceding month or two. The beauty of this research is that what one may call a kind of probable constant error, namely, the danger of the student being tempted to do himself more than justice, makes the results all the more striking. For it was found that 75 per cent of the students read nothing but newspapers and trashy novelettes, a typical list being as follows:—"I read comic papers and various books, such as the 'Doctor's

Double,' 'Dick Turpin's Marvels,' 'The Pace that Kills,' 'Pickwick Papers,' and 'Henry Esmond'" (the last, I suspect, may be part of the "constant error"!). And the students were *voluntary* evening students, so the selective factor again makes the results more striking.

Another simple investigation of this type is Dr. E. O. Lewis's on the popularity of school subjects, with its significant revelation that, among eight thousand elementary school children, Repetition—the lesson intended to instil a love of good poetry—was the most unpopular subject in the day's work, a common reason for the dislike being typified by the remark, "I get tired of shouting the same thing over and over again."

One of the main advantages of such inquiries as this is that they afford to the teacher interesting sidelights on to the minds of children, which do not emerge so readily in the routine of school work. One meets, for example, the rank utilitarian attitude of the elementary school boy of thirteen or fourteen in the boy who put Scripture low in the popularity test because "You can't get a living by Scripture," and in another who frankly said, "I don't like Scripture because it will be no use to me after I am fourteen."

But perhaps the most striking result of such investigations is the evidence one gets of the rich store of individual variations in all types of mental activity existing in even a supposedly homogeneous group of pupils, guarding us against a too facile generalization as to an imagined "average pupil." I will close this section with a little study in individual variation gained in the course of a simple test. A class of girls of fifteen had just had a lesson on the sonnet, given by a student. In the half-hour remaining after the lesson I asked them to write a sonnet on the making of peace (it was just after the signing of the Treaty of Versailles). It is well to bear in mind that the writers of the two samples had to study the same literature and that the teacher had to give them similar instruction. The manuscript of the first attempt quoted had many alterations. Though a number of its lines do not conform to the rules of the sonnet it breathes, I think, something of the spirit of poetry.

ON THE GREAT WAR AND THE SIGNING OF PEACE.

(By A. B., aged fifteen.)

For four long years, o'er Europe's stricken lands
The war clouds lowered, and conquered nations lay
Crushed and bleeding, trampled in the clay,
The fate of earth in one mad tyrant's hand.
But by great sacrifice the gallant band
Of heroes suffered, died, and gained the day;
And so came Peace to Europe's sorrowing strand.
Be worthy of their sacrifice, ye world!
War's grim banner must not be unfurled
Again in history. They died for this,
And such contempt of their great deeds
Would anger God in Heaven.

The second selection forms an effective contrast.

(By C. D., aged fifteen.)

The Great War is ended so now we are glad,
The Germans we've beaten from Belgium and France,
We knew from the first they had not a chance
To gain a victory o'er any British lad.
The Peace of the Nations we all wish we had.
But soon it will be signed in Belgium and France,
The representatives of the Grand Alliance
Oh what a busy time they must have had.

3. In the third section I include psychological experiments carried out in the class room or laboratory with the object of discovering facts or laws relating to selected mental processes, but usually dissociated from the complex life of school. These experiments come nearest to scientific experiments in the strict sense; we can sometimes control conditions with considerable accuracy and may vary one condition at a time, or counteract other variables by repeating under varying conditions. The disadvantage of this kind of experiment is, of course, that it usually,

though not always, deals with processes under more or less artificial conditions, somewhat remote from the more complex conditions of school life and work. But the science of education, if it is to be built up at all, must be built from both ends: we must observe the results of various kinds of work in the schools on the one hand, and on the other we must seek to establish a more definite psychology of mental processes which will enable us to understand more fully why certain things are a success and others a failure.

Even experiments which leave us in a state of uncertainty may not be without their value in shaking over-confident dogmatism—witness the results of experimental work on the transference of the effects of special training and their influence on the doctrine of formal training. Again, even when an experiment only seems to establish a view which was already held to be obvious, we cannot assume the experiment is useless. For some things held to be "obvious" have been demonstrated by experiment to be false without doubt. For example, Dr. Ballard's research entitled "Reminiscence and Obliviscence" revealed the surprising fact that young children do not remember a poem best immediately after they have read it, but about two days later, though the poem be not looked at in between; all children and most adults would, I think, have regarded the opposite as "obvious." Most persons, I find, are also convinced that the best way to learn a poem is to take it bit by bit, instead of reading the whole poem through and through again. Experiment has shown the opposite to be true for most persons.

We may consider finally the question of experimental psychology and education in the training of the student. What can one hope to do in the short time that can be spared for experimental psychology in the training college course or in the University fourth-year course?

In the first place one can make the general psychology more real by some experimental work. One can bring home facts with far greater force if they are discovered by students in their own experiments. For example, few can realize so strongly the relative independence of different types or aspects of memory, visual and auditory, rote and substance, as those who in experiments have found themselves near the top of a class in one type and at or near the bottom in another type.

Secondly, there is nothing like a course in experimental psychology to make a student realize the enormous range of individual variations in every kind of ability.

Thirdly, the experimental work should help a student to understand the growing literature on experimental work in education and to subject it to a more thorough criticism.

The first aim of the training in experimental work at college should be to encourage the open-minded attitude of the seeker for truth, the desire to get to bedrock facts, when facts are needed. Hence I think it useful to gather constantly in class all kinds of statistics, as to the changing interests of the students in various studies at different ages, as to their experiences in their adolescence, the motives for adopting the teaching profession, the varied elements which appeal most in poetry, the rate of reading, &c. It is true that some students who will laboriously copy down every word of psychological platitudes into which I fear one drops in unguarded moments, will sit with vacant faces when interesting individual differences are being discovered. On the whole, however, I think it may be hoped that by such work we may slowly set up in the minds of students a tendency to be dissatisfied with vague opinions when they can be tested by definite inquiries, a refusal to generalize on one's own narrow experience when statistical results are obtainable, a more open-minded attitude towards experimental work of a wider kind in the schools, and, above all, a realization that the work of education is of such supreme importance that in forming an opinion only in the light of every fact ascertainable, the utmost patience and pains are well worth while. And if experiment in the matter

of mind seems so far to have accomplished little compared with the marvellous results of experiment in physical science, let us consider, as Bergson has urged us to, the youth of this movement, and reflect what results might have been obtained if there had been a parallel army of workers equal in ability to that in the sphere of physical science, working through the centuries with equal zeal at the experimental investigation of problems of the mind.

THE HEAD MISTRESSES' CONFERENCE.

THE forty-eighth Annual Conference of the Association of Head Mistresses of Public Secondary Schools was held at the Lady Eleanor Holles' School, Hackney, on June 9 and 10, under the Presidency of Miss Fanner, M.A., of the County Secondary School, Putney.

The morning session on Friday, the 9th, was held at the Cripplegate Institute, and was welcomed there by Mr. Capper, who gave a short account of the historical interest of the neighbourhood and of the School. Then followed the election of Miss Haig Brown as Treasurer and Miss Norden as Auditor. Miss Robertson received a very warm welcome on her election as an Associate member.

When we consider the nature and urgency of the educational problems that face us at the present time, it will be readily seen that the strenuous work of the sub-committees during the year is followed by a strenuous two days of conference, discussion, assimilation, and determination of course of action. Such a Conference is very impressive; those present represent the educational needs of thousands of girls and the educational aspirations of thousands of parents. They are faced by such far-reaching questions as those of the balance of the curriculum, the consideration of new methods of work based on the fuller development of individuality, the lightening of the examination yoke, the value of the present system of inspections, the conditions of admission to secondary schools, the effect of economies following the recommendations of the Geddes' Committee, the Burnham scale of salaries, and the Superannuation Act of 1918.

This year the various sub-committees presented their reports and proved that substantial work had been done with regard to the improvement of examinations through conferences arranged with the various examining bodies; the difficult problem of openings for girls had been considered and the suitability of employments investigated; the Board of Education were urged to establish a satisfactory course for the training of Art teachers; the desirability of getting into touch with head mistresses of the British Empire overseas was urged; the problems of boarding schools were sympathetically treated; and much work was done by the sub-committees dealing with questions of entrance examinations and scholarships. The large number and infinite variety of the reports show that the work covers a wide field and the interests of the head mistresses are by no means confined to the limits of their own schools.

The Report brings out strongly the closer co-operation which exists between the different branches of the teaching profession, and shows the strength of combined action. The Joint Committee of the four Secondary Associations have met the officials of the Board of Education to discuss problems arising out of the provisions of the Superannuation Act, and have made recommendations to the London University School Examination Board.

Miss Stoneman voiced the general appreciation of the State Scholarships as adequate in amount, involving no new examination and based on the financial circumstances of the parent, and regretted that they had been swept away without notice, thus inflicting a great hardship on those girls who had entered the Advanced Courses two years ago in the belief that these scholarships would still exist.

The President herself moved the adoption of the Report as a whole and picked out the salient points. She opened by speaking of the loss sustained by the Association in the deaths of Miss Connolly, ex-President, and Miss Bentinck Smith, Head Mistress of St. Leonards' School, St. Andrews, both of whom have done such good work for education.

The Head Mistresses as a body always stand for greater elasticity, for individuality in schools, and for consideration of local and special circumstances. Naturally, therefore, they did not agree with the recommendation of the Departmental Committee that "as a rule the Free Place examination should be common to the whole area," regardless of the varying conditions in that area; nor that "the standard of admission to a secondary school for all pupils should be determined by reference to the standard of a First Examination taken at the normal age," as it is impossible to guarantee the future examination capacity of girls of eleven, and it leads to the standardization of all secondary schools to an examination level. In connexion with the same question Miss Lowe advocated that all suitable children should be able to benefit by a secondary education and that those who have not passed through an elementary school should not be debarred from competing for free places. Resolutions were carried stating that free place awards should depend on the two factors of the financial need of the parent and the suitability of the child, irrespective of the previous place of education; and that bursaries (not exceeding half the fees) should be offered and competed for by pupils already in the school or by prospective pupils who fulfil the same two conditions.

In the absence of the Press the Conference discussed with great freedom the question of the purpose and methods of Full Inspections by the Board of Education. It was evident that the majority were not satisfied with inspections as at present conducted, and would welcome a conference on the subject between the Board and the four Secondary Associations.

After luncheon the Conference reassembled at the Lady Eleanor Holles' School, where they were welcomed by the Head Mistress, Miss Nickalls. Then followed the main discussion on the Balance of the Curriculum, to which was devoted the remainder of the afternoon and the greater part of Saturday morning. This was in part the outcome of the special investigation by the Board of the four important subjects, English, Classics, Modern Languages, and Science. The Head Mistresses discussed the balance which should be maintained and included other subjects of equal importance, grouped together under the heads of the Humanities, Aesthetics, the Sciences, Domestic Subjects, and Physical Education. Practically every subject was included except Geography, for which there was no special plea, in spite of the fact that as long ago as 1815 the introduction to Pinkerton's Atlas states that "Geography is a study so universally instructive and pleasing, that it has for nearly a century been taught, even to females, whose pursuits are foreign from serious researches. In the trivial conversations of the social circle, in the daily avidity of the occurrences of the times, pregnant indeed above all others with rapid and important changes that affect the very existence of states and empires, geography has become an habitual resource to the elegant female as well as to the profound philosopher."

It is a hopeless task to arrive at any conclusion, for although most agree that the curriculum is overcrowded, each specialist urges the importance of her own particular subject and requires that even more time should be given to it.

Miss Gwatkin opened the discussion and faced the problem of how to give opportunity to the pursuit of knowledge without dulling the desire to learn, and laid stress on the point that it is not balance of instruction but balance of opportunity that is needed, and that we

should concentrate on vision and outlook rather than on knowledge. The time of girlhood is limited, and if the school destroys that zest for learning which is inherent in little children, however good the examination results may be, it will not only have failed to educate its girls, but by dulling their original powers will have prevented them from carrying on their own education through life. She gave practical suggestions for work and pleaded for a balance which was not rigid.

Then followed the specialists. Miss Brock carried her audience with her in her eloquent plea for inclusion of the classics, not only for themselves, but also for the difference of outlook which they give to other subjects. Miss Haig Brown defended the claims of Scripture; Miss Gray, of English; Miss Major, of History; Miss Beard, of Modern Languages. The claims of Aesthetics, so often ignored by the authorities, were upheld by Miss Ainslie, who confined herself mainly to pictorial art, not only as creative in the classroom, but as an inspiration and an atmosphere.

Miss Home spoke of the educative value of Music; developing from folk songs to the great masters and including some of the best modern work. The creative impulse must be allowed full scope and the children will improvise their own melodies. Miss Dawson said that Dancing, if properly taught, is educative in its development of the aesthetic side, and gives realization of beauty and rhythm.

On Saturday morning Miss Burstall opened with a practical and helpful speech on the place of Science and Mathematics, saying that although she believed very profoundly in the importance of these subjects, she would not require the formal study of the latter to be carried through the school. She suggested proportions of time to be spent at different stages of development. In Science she believed that the work for girls should be mainly biological and consist of Zoology and Botany, giving opportunity for experimental work and based on a sound foundation of Physics and Chemistry.

Miss d'Auvergne's paper dealt with the place of Domestic Subjects.

Miss Gardner read an excellent and carefully considered paper on Physical education and spoke warmly of the benefit derived from co-operation between the school doctor and the Games' Mistress. She included dancing as a part of training, and was warmly applauded when she spoke of the advantages of Net Ball as a school game.

In the discussion which followed the members recognized the difficulty of attempting any definite balance of subjects. Miss Leahy suggested that instead of giving up subjects, syllabuses should be curtailed and only what is essential and vital retained. To do this the sympathy and aid of examining bodies must be enlisted as their long syllabuses are largely responsible for a curriculum which often strains both teachers and taught to the utmost.

The Presidential address is always eagerly anticipated, as it is an opportunity of summarizing ideals and progress and takes a broad view of the whole field of educational effort and aspiration. Miss Fanner began by speaking of the defeat of the Geddes' proposals on education and characterized it as a triumph of spiritual forces over commercial interests. Next she turned to the Burnham scales, and considered that their indirect reduction by a levy of 5 per cent for purposes of superannuation is entirely unjustifiable. From these preliminary statements she turned to the main subject of her address—the achievement of individual personality which is the purpose of all our educational activity. Out of the present ferment of ideas we hope may be produced in the future "new bread, more nourishing and more digestive than some on which we ourselves have been fed." She believed that as the strength of woman lies in the understanding of persons, her chief interest has always been in the Humanities, but for the full development of her personality she must

POST-GRADUATE STUDY

FOR LONDON UNIVERSITY EXAMINATIONS.

University Correspondence College

Founded 1887.

Principal: WILLIAM BRIGGS, LL.D., D.C.L., M.A., B.Sc., F.C.S., F.R.A.S.

Provides Courses of Preparation in Arts, Science, Economics, Commerce, Theology, Laws, Music, and Engineering by Tutors who are specialists in their several subjects.

SPECIAL ADVANTAGES

offered by

University Correspondence College.

Tutors in Residence,

who correct the Student's answers *promptly*, and return them while the difficulties are still fresh in his mind.

Tutors giving their Whole Time

to the work of the College.

Specialists for each Subject,

the majority of whom have taken First-Class Honours.

Full Notes to each Lesson

in *all* subjects.

Correction of Individual Weaknesses.

Very full solutions to the Test Papers are provided to cover all general difficulties, thus enabling the tutor to devote his whole time economically to correcting the individual weaknesses of a candidate.

Printed or Typewritten Lesson Papers.

Detailed Schemes of Science Practical Work

for the Inter. Science, Inter. Arts, B.Sc., and
B.A. Pass Examinations.

Post-Graduate Prospectus

giving further particulars, post free from THE SECRETARY,

University Correspondence College, No. 14 Burlington House, Cambridge.

understand and apply the laws of Biology and Psychology. As her function is the nurture of a many-sided life, training in Aesthetics and Crafts is equally important—a training which does not consist merely in technique, but aims at developing judgment through appreciation. All these subjects have their roots in the training at school and must be regarded as a means to an end and not ends in themselves; they are tools which must yield place eventually to newer and finer instruments, better adjusted to the achievement of individual personality. This may be developed in two ways; first, we must train not only the reason and will of the conscious mind, but also the instincts and emotions whose roots are in the unconscious; these are reached through Aesthetics and Crafts which sublimate our emotions into higher forms and these by becoming part of our conscious life enlarge and enrich our whole personality.

The afternoon brought a change of discussion and Miss Lowe opened a subject of great interest to all Head Mistresses on alternative methods of education. She began by examining the methods of older times, of which we catch echoes in the methods of to-day, and showed that they strive to satisfy either the instinct of common or of individual work. The Greeks attained their goal of individuality through an education which gave to the boy no free choice of subject or method; yet the Greek student or philosopher certainly thought for himself. Medieval teaching, chiefly in the monastery, gave little variety and resulted in general indifference to learning with intellectual survival of the fittest. The Renaissance re-formulated the idea of the individual, but the methods were too stereotyped. The public school policy was to oblige a rigid prescribed course of study resulting once more in survival of the fittest. The Scotch dominie school gave a certain amount of class teaching, but there was also individual attention, especially for the promising pupil, and a real scholar was by no means infrequent. At the present time there are attempts to realize the twofold idea of common and individual teaching. In the home school the individual goes at her own pace, but she misses the friction of other minds and the inspiration of a specialist. In the class system of the Secondary School the pupil has the advantage of learning from the failures and successes of others, and of knowing women of wide reading, but the teacher may lecture and the lazy-minded pupil do nothing; the lesson may be closed at a vital point by the school bell calling for a change of subject. The Appreciation class is the antithesis of the Dalton Scheme as the teacher is predominant. Those who urge complete freedom of choice on the part of the pupils do so on the assumption that all work is against the grain—a conclusion which all good teachers know to be untrue. The Dalton plan admits of independent work, develops a sense of responsibility, allows girls to work at their own rate, but by too great dependence on books loses some of the human side and by the reduced number of class lessons suffer some loss of stimulus and deprives the teacher of scope.

These varieties of plan have made all teachers consider the question of method and try to evolve some way for themselves which will admit of independent work and the free use of books and yet maintain the human and social side of class work.

During the ensuing discussion Mrs. O'Brien Harris and several others gave some account of their own experiments.

The social side of the Conference gives an opportunity of meeting friends and of indulging in informal discussion, and is always greatly appreciated. On Friday afternoon the Governors of the school entertained the Head Mistresses at tea, and the Saturday Conference was followed by a most enjoyable At Home at the Mansion House given by the Lord Mayor.

On Friday also, there was a special service at St. Giles', Cripplegate, for those attending the Conference.

Late Head Mistress of the Wakefield High School.

THE DEPARTMENTAL REPORT ON THE TEACHING OF ENGLISH.

FROM A SECONDARY SCHOOL POINT OF VIEW.

BY J. F. USHERWOOD.

THE Departmental Report since its issue last December has attracted much attention from all sections of the community, and certainly it has placed all teachers under a lasting debt of gratitude, not only for stating so clearly and cogently the position English teaching ought to hold in our educational system, but also for the high and worthy ideals of education in general set forth in it. It is especially necessary for those engaged in the heat and burden of the struggle to stop and ask themselves at what goal they are aiming, and the Report by its introductory chapter gives us an opportunity to do this. It is good that we should be reminded that education is not the same thing as information, that it is guidance in the acquiring of experience.

Making this the starting point of its inquiry, the Report deduces the supreme importance of good English teaching, because it is the foundation on which all other education must be based. "For this purpose" (*i.e.* the refounding of education), "of all the means available there is only one which fulfils all the conditions of our problem" (p. 14). To progress in any direction we need to think; now we think in our mother tongue and if this instrument is faulty, our thinking is faulty too. As the Report says (p. 20): "English is not merely the medium of our thought, it is the very stuff and process of it." The argument was admirably developed by Clutton Brock in a recent article in *The Manchester Guardian*. The close observer knows how deep this truth goes and how little apprehended. Quite often the teacher gets the humiliating answer, "I know, but I don't know how to put it." What an illumination of failure somewhere in the earlier training and teaching. It follows, then, that there is no antithesis between the teaching of English and of other things; they are practice in the use of English, while all teachers are teachers of English. "In every department of school work confused and slovenly English must be regarded as the result of a failure on the part of the teacher" (p. 24).

So much for what English should be; the Report frankly recognizes that actually "English teaching was often regarded as inferior." All teachers know how true this is, and how often we must use not the past tense, but the present, so that the first necessity in many schools is to alter this state of things. In the older public schools the classical tradition is strong, and either tacitly or explicitly it is held that the study of Latin and Greek is the most efficient way of learning to write good English and of gaining a true appreciation of our literature (*v.* Classical Report, p. 11. "We regard the wide extension of a sound knowledge of the classical languages, or at least of Latin, as of great and almost *irreplaceable* value as a means of promoting the proper use of the English language both in speech and writing by *all classes* of the community.") Where such opinions as these are held, much excellent work may be done in English and probably is, but it is not likely that English will be taught on a logical or definite scheme or be held in the esteem which is its due. Nor is the position better in many modern secondary schools; often they began their existence as "organized science schools," and though their curriculum has been modified the bias remains, and English is regarded as of secondary importance, pushed into odd corners of the time table, and taught by the least efficient of the staff.

Let us consider that point gained—the supreme importance of English—and three main conditions of reform present themselves. First the appointment of a properly qualified specialist with the same powers to organize and direct as are given to other senior masters. In many,

LONGMANS, GREEN & CO., 39 PATERNOSTER ROW, LONDON, E.C. 4.

perhaps in most, secondary schools this is already the case, but there are still too many where it is not so, where the English work is allotted to various members of the staff on no very clear principle, under the general supervision of the head master, while the work is insufficiently co-ordinated. The Report is definite in recommending this reform, but it could have been even more emphatic, for the point is vital. The other conditions follow as corollaries—that the teaching generally of English must be in the hands of men at least as well qualified as are the Science and Mathematical teachers in their subjects, and that sufficient time must be allocated to English; it is impossible to make any real progress when a bare hour, or hour and a half, in the week is all that it is allowed. With these conditions granted it will follow that a well-knit scheme throughout the main part of the school will be possible, leading to advanced courses where English is not merely a subsidiary subject but a main one. The recommendations of the Report on the position of English in advanced courses are particularly valuable, and one is glad to note that the Board has already taken steps to give effect to them. This must stimulate the interest taken in English in the highest part of the school, and in its turn help to train teachers who are effectively qualified, so that we should have started a movement which is bound to produce valuable results for the future.

So long then as the Report is dealing with its subject on broad general lines it is in every way admirable, and by attracting general attention to the importance of English, and by stimulating the interest of school authorities, it must have a wholly beneficial effect on future education. When, however, the practical teacher reads the Report he is conscious of a certain amount of disappointment; he is grateful for all that is said in these introductory chapters, but to be candid, the really keen teacher knew much of it already, though never before has such a weighty and eloquent statement of these truths been made, and never has the outside world needed more to be reminded of them.

The question arises, however, How attain these aims? By what methods and along what lines should schools organize themselves to reach these ideals? And the answer to the question is not always clear or distinct. Of course the problem is more than half solved if the conditions of reform mentioned above are adopted; but there are many questions involved in the actual teaching of English, especially in secondary schools, about which there is wide divergence of opinion and on which the considered opinion of the Committee would have been invaluable. One appreciates the anxiety not to do anything to stereotype the teaching of English and the realization that the less an original teacher is fettered the more valuable his work will be, but we can all learn from one another, and specimen syllabuses, or the details of time tables, even of actual lessons would have been welcomed. The Classical Report certainly has the advantage in this respect, though it must be remembered that it is dealing with something much cleaner cut and more definite. There are exceptions fortunately, and such a paragraph as the one on p. 151 about the methods used at the Royal Naval College, Dartmouth, is worth much to other teachers—the practice of getting every boy to lecture to the others on any subject he liked will be novel and suggestive to many. One admits that the Report could not be swollen with too much detail, but more of this sort of thing might have been given in appendices.

On the other hand many difficulties which confront the teacher are faced most admirably; the vexed question of grammar is handled fully and clearly in Ch. IX, where it is shown that many of the objections to grammar are based on old-fashioned conceptions of what grammar should be and what it aims at doing; thus on p. 284: "English grammar came to be (1) formulated as a series of doctrines on correct speech; (2) modelled as closely as possible on the pattern of the old Latin grammars."

(Continued on page 426.)

SIX NEW BOOKS

Nouveaux Contes Français

By MARC CEPPI, Senior Modern Language Master, Victoria College, Jersey. With or without vocabulary. 2s.

The success of Mr. Ceppi's "Contes Français" (2s.) has induced him to prepare a similar volume. The tales are short, bright, and attractive. They are written in simple French, and carefully graduated. Much care has been taken in the use of tenses: one story is written entirely in the present tense, another in the future, a third introduces the conditional present, &c. There is a full vocabulary and carefully prepared questionnaire and exercises (including re-translation).

Concise French Course

Adapted for the use of British Students from the French of P. A. DESSAGNES, Professeur au Lycée Louis-le-Grand, Paris, by MARC CEPPI. 2s. 6d.

This course is intended to meet the needs of older students and for use in evening and continuation schools. The rate of progress is much more rapid than in ordinary school courses; essentials only are dealt with, and the exercises are on a novel plan. Much of the subject matter is based on simple scientific experiments. The book is well illustrated, and there is a French-English vocabulary.

Solid Geometry

Practical and Theoretical *pari passu*.

By V. LE NEVE FOSTER, M.A., Eton College. 3s. 6d.

[Bell's Mathematical Series: General Editor, Prof. W. P. Milne, D.Sc.]

In this third volume of Mr. Foster's course, as in the two previous volumes on *PLANE GEOMETRY* (3s. each) the theoretical and practical aspects of the subject are developed *pari passu*. Ample practice is given in numerical work applied to simple and obvious figures in space, so that the pupil approaches the formal propositions with his mind well stocked with concrete examples of the figures and properties of Solid Geometry, and is therefore in a better position to understand them.

A Text-Book of Machine Construction and Drawing

By H. E. MERRITT, B.Sc., Eng., and M. PLATT, M.Eng., Lecturers in Engineering at the West Ham Municipal College. Fcap 4to. With 8 plates and over 200 diagrams in the text. 7s. 6d. net.

The object of this book is to provide a thorough and comprehensive exposition of the subject for Engineering students. It adequately covers intermediate requirements, while owing to the up-to-date character of the illustrations it will also be found of service to more advanced students as a book of reference.

First Lessons in Practical Biology

By E. W. SHANN, B.Sc., F.Z.S., Biology Master at Oundle School. With 71 illustrations. 5s.

Intended to meet the need for an elementary book suitable for the lower fifth forms who are ready to begin the serious study of Biology. The author's aim is to inculcate habits of accurate observation, of concise description, and of intelligent reasoning, as well as to create a background for the further study of Biology. All the objects chosen for study can readily be obtained, and no expensive apparatus is required.

The Discovery of the Circulation of the Blood

By CHARLES SINGER, M.D., F.R.C.P., Lecturer on the History of Biological Sciences in the University of Oxford. Illustrated. About 1s. 3d.

This is the first volume of a new series of *Classics of Scientific Method*, edited by E. R. THOMAS, M.A., M.Sc., Head Master of the Royal Grammar School, Newcastle-on-Tyne. The object of the series is to show by quotation from original papers, with a complete explanatory introduction, the lines of development along which human thought achieved certain fundamental discoveries.

Detailed prospectuses of any of the above books will be sent on application to

VOLUMES RECENTLY RE-ISSUED IN BOHN'S LIBRARIES

Bohn's well-known libraries consist of a series of over 500 volumes of Standard Literature, including many translations, price 6s. net each (with a few exceptions). Messrs. BELL were compelled owing to war conditions to allow a number of volumes to go out of print. In response to requests from students and others, they have now found it possible to re-issue some of these volumes, details of which will be found below:—

EARLY ENGLISH LITERATURE. By BERNHARD TEN BRINK. In three volumes. Small post 8vo. 6s. net each.

A new impression of Vol. II of this well-known work is now ready, and the complete set of three volumes is thus again available.

Vol. I. TO WYCLIF. Translated by Horace M. Kennedy.

Vol. II. WYCLIF, CHAUCER, EARLIEST DRAMA, RENAISSANCE. Translated by W. Clarke Robinson, Ph.D.

Vol. III. FROM THE FOURTEENTH CENTURY TO THE DEATH OF SURREY. Edited by Dr. Alois Brandl. Translated by L. Dora Schmittz.

KANT'S CRITIQUE OF PURE REASON. Translated by J. M. D. MEIKLEJOHN. Small post 8vo. 6s. net.

VERGIL'S WORKS. A Literal Prose Translation by A. HAMILTON BRYCE, LL.D. Small post 8vo. 6s. net.

THE PROSE WORKS OF JONATHAN SWIFT. Edited by TEMPLE SCOTT. In twelve volumes. Small post 8vo. 6s. net each.

The following volumes have been recently reprinted, thus making the complete edition available again:—

Vol. II. THE JOURNAL TO STELLA. Edited by Frederick Ryland, M.A.

Vol. VI. THE DRAPIER'S LETTERS.

Vol. VIII. GULLIVER'S TRAVELS. Edited by G. Ravenscroft Dennis.

Vol. IX. CONTRIBUTIONS TO THE EXAMINER, TATTLER, SPECTATOR, &c.

Details of the other volumes will be sent on request.

AN ENQUIRY INTO THE NATURE AND CAUSES OF THE WEALTH OF THE NATIONS. By ADAM SMITH, LL.D. Reprinted from the Sixth Edition, with a new Introduction by Prof. W. R. SCOTT, D.Phil., Litt.D. Two volumes. Small post 8vo. 12s. net (sold in sets only).

G. BELL & SONS, Ltd., York House, Portugal St., W.C. 2

By tracing recent investigations into modern English, especially those of Professor Jespersen, of Copenhagen, the Report shows that modern English is more civilized than the classical languages or modern German, and that its structure is quite different. It concludes that *English* grammar is unsuitable as an introduction to linguistic study, and that the teaching of grammar to children should be pure grammar concerned with the essential modes of thought of all people. It is pure grammar (p. 290) because it is independent of grammatical forms and deals with laws of general application. In short the proper grammar to teach in schools is functional grammar. Probably most teachers, though not all, had already been forced to similar conclusions by their own experiences, and certainly the effect of this pronouncement must be profound. It should reverse the tendency to do away with the study of any formal grammar altogether, and bring it back upon a more satisfactory and rational basis. What is needed for progress is a recognition that the sentence and not the word is the unit of language, and a complete abandonment of mechanical methods.

It is impossible to discuss grammar without reference to terminology and the Report adopts that recommended by the Joint Committee. All teachers are agreed that a universal terminology is vitally necessary, and to that extent welcome the decision of the Report, but many feel very strongly that some of the recommendations of the Joint Committee are of doubtful validity. Apparently the English Committee felt that the subject was a tangled one, and were content to adopt the suggestions of their predecessors on this point.

So far as grammar is concerned, the Report speaks definitely, though there are many matters of important detail for teachers to decide; let us turn to another debatable point—the use of phonetics. Repeatedly this

is mentioned with approval (e.g. p. 208), but nowhere is there a clear statement as to all that is implied. Considering that many teachers of English as yet make no use of phonetics, and know very little about it, this is unfortunate; more should have been said for instance about the notation to be used. Presumably that employed by Prof. Wyld in such a book as "Modern Colloquial English" was in the minds of the Committee. That point settled, however, there still remains the question of how it is to be used, and the problem of standard pronunciation, which the Report is content to define as "pronunciation free from provincialisms and vulgarisms" (p. 66). Altogether the Report will make teachers think seriously about phonetics where at present they know little, but good results will hardly follow, unless some carefully thought out scheme is generally adopted.

There could, too, have been more practical guidance on the question of composition; methods of introducing the subject, of extending vocabulary, of building up the paragraph from the sentence, might all have received more attention. Above all, except for a very cautious paragraph, (p. 110) little is said about original composition in verse for comparatively young children. There are some who make original composition in prose or verse the test of progress in English; others regard it as the encouragement of precocity, since a child of fourteen has little background of experience to draw upon and may easily see these immature efforts in a wrong perspective. Which view is right? It is of great importance that the matter should be decided, unless effort is to be misdirected. In this respect the Report is not likely to make much difference: there will be most diverse aims and methods, but it is to be hoped that the exercise of making abstracts or précis of speeches or of passages from books will never be dropped. This is something which even average children

(Continued on page 428.)

MASON'S SCRIPTURE MANUALS.

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local, the Pupil Teachers', and Diocesan Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. After each question, the answer is either given in full, or the number of the verse or verses in which it occurs.

The following Manuals are already published:—

	s.	d.
The Four Gospels each	0	9
The Acts of the Apostles	1	6
Genesis and Exodus	1	6
Joshua and Judges	1	0
Samuel I.	0	9
Samuel II.	0	9

THE HANDBOOK TO THE DALTON PLAN BY ITS FOUNDER

Just Out. Crown 8vo. With Portrait. 5s. net.

EDUCATION ON THE DALTON PLAN

By HELEN PARKHURST

With an Introduction by T. P. Nunn, M.A., D.Sc.,
Professor of Education, University of London; and contri-
butions by Rosa Bassett, M.B.E., B.A., & John Eades.

THIS new book contains a full exposition of the Dalton Plan by its founder. Miss Parkhurst, says Dr. Nunn in his *Introduction*, "has envisaged a definite problem of great practical importance—namely, how to secure from the vast volume of educational effort expended in schools a richer harvest of individual culture and efficiency. The 'Dalton Laboratory Plan' is her solution . . . [it] offers a path of progress which may safely be taken by all who have the gifts of intelligence, devotion, and enterprise."

The book contains additional chapters on the working of the Plan in British Secondary and Elementary Schools, together with sample assignments adapted to their respective needs.

G. BELL & SONS, Portugal Street, W.C. 2.

BELL'S STANDARD TEXT-BOOKS

HISTORY

MODERN EUROPEAN HISTORY. By C. D. HAZEN, Professor of History, Columbia University. With 154 illustrations, 26 maps in colour, and 9 in black and white. 7s. 6d. net.
"Contains a fine array of historical portraits and other adornments. It is undoubtedly a first-rate text-book."—*Journal of Education*.

BRITISH DIPLOMACY, 1813-1815. Select documents dealing with the Reconstruction of Europe. Edited by C. K. WEBSTER, M.A., Professor of Modern History, University of Liverpool. 12s. 6d. net.
"An invaluable collection of 230 extracts from original documents. . . The story of 1813-15 as told in this illuminating source-book is full of parallels to present-day problems."—*Journal of Education*.

CONCISE HISTORICAL ATLAS FOR SCHOOLS (1789-1914.) Compiled and drawn by B. V. DARBISHIRE, M.A. With 108 Maps and Diagrams. 2s.
"A marvel of compression . . . the author deals with almost every aspect of his subject."—*Athenaeum*.

A HISTORICAL COURSE FOR MIDDLE FORMS. By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School, Cricklewood. In 4 vols. 3s. each.
Vol. I.—WESTERN EUROPE. 4th edition.
Vol. II.—THE ENGLISH NATION: INDUSTRIAL AND SOCIAL HISTORY. 4th edition.
Vol. III.—THE ENGLISH NATION: CONSTITUTIONAL HISTORY.
Vol. IV.—THE ENGLISH NATION: POLITICAL AND GENERAL HISTORY.

ENGLISH HISTORY SOURCE-BOOKS. Joint Editors, S. E. WINBOLT, M.A., Christ's Hospital, Horsham; KENNETH BELL, M.A., Fellow of Balliol College, Oxford. 17 volumes, covering the period from 449-1887. Reduced price, 1s. 6d. net each. Also *A Source Book of London History*. 1s. 6d. net. *Scottish History Source Books* (1637-1688 and 1689-1746). 1s. 6d. net each. *Canada, 1535-1913*. 1s. 6d. net.

The editors have aimed at the greatest possible variety in the choice of extracts, and letters, biographies, ballads, and poems, diaries, debates, and newspaper accounts have all been laid under contribution.

AN INTRODUCTION TO ENGLISH INDUSTRIAL HISTORY. By HENRY ALLSOPP, B.A., formerly Vice-Principal of Ruskin College, Oxford. With Maps and Plans. 6th edition. 2s. 6d.
"A well-proportioned economic history of England from 1066 to the present day."—*Manchester Guardian*.

A SENIOR HISTORY OF ENGLAND. By A. E. MCKILLIAM, M.A., University of St. Andrews. Third edition. 3s.

A JUNIOR HISTORY OF ENGLAND. By E. NIXON. Seventh edition. With 66 Illustrations. 2s. 6d.

EUROPE IN THE NINETEENTH CENTURY. An Outline History from 1802 to the opening of the Great War, 1914. By E. NIXON and H. R. STEEL. With Maps. 4th edition. 2s. 6d.

ANCIENT HISTORY FOR SCHOOLS from the Earliest Times to the Death of the Emperor Augustus. By E. NIXON and H. R. STEEL. 2nd edition. With 29 Illustrations and 7 Maps. 3s.

THE BUILDING OF THE BRITISH EMPIRE. By E. M. RICHARDSON, B.A. 4th edition. With Illustrations, Maps, and Plans. 2s. 6d.

LANDMARKS IN THE HISTORY OF EUROPE. By E. M. RICHARDSON, B.A. 6th edition. With Illustrations and Maps. 3s.

AN IMPERIAL HISTORY OF ENGLAND. By G. GUEST, B.A. New and revised edition (1921). 2s. 6d.

A SOCIAL HISTORY OF ENGLAND. By the same author. 5th edition, revised (1921). 2s. 6d.

A CONSTITUTIONAL HISTORY OF ENGLAND. By the same author. Revised edition (1920). 2s. 6d.

Each of these three volumes by Mr. Guest is self-contained, a different aspect of the national development being presented in each. They are well illustrated and strongly bound.

LATIN

BELL'S SIMPLIFIED LATIN CLASSICS. Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. With illustrations, translation exercises, and a full vocabulary. 1s. 6d. each.
Caesar's Invasion of Britain. *Vergil's Athletic Sports.*
Livy's Seven Kings of Rome. *Vergil's Taking of Troy.*
Simple Selections from Cicero's Letters. *Tacitus' Agricola.*
Sallust's Catiline.
Caesar's Fifth Campaign (from *De Bello Gallico*, Book V). *Caesar's Belgian Campaign.*

BELL'S ONE-TERM LATIN CLASSICS. Designed for use with Fourth or Fifth Forms.
Cicero's Pro Milone. Edited by C. E. LAURENCE, M.A., Assistant Master at Haileybury College. 1s. 8d.
Livy's Veii and the Etruscan Confederacy. Edited by S. E. WINBOLT, M.A. 1s. 3d.

BELL'S ILLUSTRATED CLASSICS. Edited by E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford. Sixty volumes, each illustrated, and containing Notes and a full Latin-English Vocabulary. *Detailed List on application.*

BELL'S ILLUSTRATED LATIN READERS. Simple Stories for translation. Extracts from Eutropius, Caesar, Ovid, Nepos, Cicero, &c. Edited by E. C. MARCHANT, M.A. With short Notes and Vocabularies. Illustrated. 1s. 6d. each.
Scalae Primae. By J. G. SPENCER, B.A. 146th Thousand.
Scalae Mediae. By PERCY A. UNDERHILL, M.A. 14th Edition.
Scalae Tertiae. By E. C. MARCHANT. 7th Edition.

BELL'S LATIN COURSE FOR THE FIRST YEAR. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. In Three Parts. With Coloured Plates and numerous other illustrations. 2s. each.

BELL'S CONCISE LATIN COURSE, PART I. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. Thirteenth edition, revised, with long quantities marked. 3s.

BELL'S CONCISE LATIN COURSE, PART II. By E. C. MARCHANT, M.A., and S. E. WINBOLT, M.A. Fifth edition. 3s. 6d.

A LATIN PROSE GRAMMAR. By E. L. CHURCHILL, B.A., and E. V. SLATER, M.A., of Eton College. Second edition. 5s.

THE SHORTER AENEID. By H. H. HARDY, M.A., Head Master of Cheltenham College. With Introduction by Prof. H. E. BUTLER, University of London. Second edition. 4s. 6d.
A volume of selected passages from the Aeneid worked up into a connected narrative by means of summaries in English. The Epic can thus be read as a whole and the story appreciated.

FABULAE ANTIQUAE. A First Year Reader. By A. M. CROFT, B.A., Leeds Girls' Modern School. Illustrated. With or without Full Vocabulary. Second edition. 1s. 9d.

DE DUCIBUS. Selections from Cornelius Nepos. By W. G. BUTLER, M.A. With Illustrations and brief Grammatical Notes. Second edition. 1s. 9d. *Uniform with Bell's Simplified Latin Classics.*

DIALOGUES OF ROMAN LIFE. By S. E. WINBOLT, M.A. Second edition. Illustrated. 2s. 6d.
A series of dialogues, both original and adapted, written in accordance with the aims of the Summer School for the Reform of Latin Teaching.

A BOOK OF THE EMPERORS. Edited with Notes and Vocabulary, by E. C. MARCHANT, M.A. Illustrated. 3rd edition. 1s. 9d.
Based upon Suetonius' Lives of the Emperors, and contains the Lives of Julius Caesar, Augustus, Caracalla, Boadicea, Vespasian, and Titus Agricola. For second year pupils.

PONS TIRONUM. A First Latin Reader. By R. B. APPLETON, M.A., and W. H. S. JONES, M.A., both of the Perse School, Cambridge. Illustrated. With Summary of Grammar Exercises and Latin Vocabulary. Second edition. 1s. 6d.

This is a fourth term book on the Direct Method, the object of which is to teach the regular Latin syntax by means of a very simple narrative.

FABULAE, Virginius Puerisque aut Narrandae aut Recitandae. By R. B. APPLETON, M.A. Illustrated. 2s. 6d.
A Reader on "Direct Method" lines for Second and Third Year pupils.

BELL'S LATIN PICTURE CARDS. Edited by Prof. FRANK GRANGER. A Set of 16 cards, printed in colours, with vocabularies and exercises on the back of each card. Price 2s. net.
Cards I-VIII illustrate subjects found in the prose writers, Caesar, Livy, Cicero, &c.

Cards IX-XVI those of the poets, Vergil, Horace, Ovid, &c.
Packets of 16 cards, confined to either series of subjects, or 16 of any one card, will be supplied if desired.

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2

can learn to do, and is invaluable as a training in intelligent reading as well as in clear and terse expression.

The greatest problem of all remains, the teaching of literature. As might be expected from a Committee which includes so many eminent writers, the Report loses no opportunity of emphasizing its importance from every point of view. Here, perhaps, is the real touchstone of success or failure in English teaching—Have the children learnt to love and value English books?

Everybody will agree with what is said, especially the definition of literature as experience of life and the clear distinction between the reading of a text slowly so as to gain a more or less scholarly insight into its qualities, and the encouragement of rapid reading by the pupils themselves in their leisure time. The Report, too, marks the final rout of those who use their texts for mere "gerund-grinding" or the elucidation of obscure etymologies. It must lead not only to a great extension of literature teaching in the near future, but also to the placing of it on saner and more fruitful lines.

We may hope to see the day come when literature will be, in the minds of children, not as it is too often to-day, one of many school subjects having little or no connexion with the ordinary activities of life, but the expression of all that is vital and true in life. For that reason one would have welcomed a stronger plea for the reading of some contemporary literature not only by those taking the advanced courses (p. 186), but also by the majority of children in our secondary schools, who will leave at the age of sixteen. One can understand the diffidence which avoided the suggestion of suitable modern books, while still wishing it could have been overcome, for a general and vague recommendation will not prevail against the inertia of many school authorities. The question of texts would be a difficulty but, given the demand, publishers would find some way of meeting it, though, as the Report recognizes,

the whole question of cheap texts has not been easy, especially of recent years.

One looks forward then with confidence, but there are pitfalls. Schools will wake up to their shortcomings and allot more time to literature. It seems an easy thing to teach, and so will sometimes be given to those who are not conspicuously fitted to teach something else. In reality, the words are often so familiar that the deep, underlying meaning and beauty are missed, and the lesson becomes no more than an exercise in reading. Even an enthusiast can fail if his personality is insufficient to pass on his enthusiasm and his knowledge to those he teaches. That was the great advantage of the classics; the difficulty of the medium did focus the attention on the meaning, and the English teacher's task is to find another way of getting the same concentration. Thus one comes back to the starting point, that with keen competent teachers in the schools, the Report may well begin a veritable revival of learning based, this time on English, and not on the Classics.

PERSONAL PARAGRAPHS.

THE King's Birthday Honours list included the following:—

BARONETS.—Sir Berkeley George Andrew Moynihan, Army Medical Advisory Board, Professor of Clinical Surgery, University of Leeds.

KNIGHTS.—Dr. Hugh Kerr Anderson, Master of Gonville and Caius College, Cambridge, since 1912; Mr. R. A. Bartram, one of the senior J.P.'s of Sunderland, leading educationist from 1870, has made many munificent gifts to charitable, religious, and educational bodies in Sunderland; Prof. W. M. Bayliss, Professor of General Physiology

An Elementary and Intermediate Algebra. By J. LIGHTFOOT, D.Sc., M.A., Author of "Elementary Logic," &c. Crown 8vo, 472 pp., cloth. 4th Edition. With Answers, **6s.** Answers Separately, **1s.**

Concrete Examples are introduced from the first, and the powerful Remainder Theorem is introduced early. A special feature is the very clear and interesting treatment of **Graphic Methods.**

"The worked examples are perfect models."—*The Teacher.*

Elementary Algebra for Junior Students. With Exercises and Answers. By J. LIGHTFOOT, D.Sc., M.A. Being Part I of "An Elementary and Intermediate Algebra." Containing a valuable introduction to **Graphic Methods.** Crown 8vo, cloth, 229 pp. Price **3s. 6d.**

Graphic Algebra for Elementary and Intermediate Students. By J. LIGHTFOOT, D.Sc., M.A., Author of "An Elementary and Intermediate Algebra," &c. Crown 8vo, 91 pp. With Answers. Price **1s.**

A detailed treatment of the subject for the use of Students who desire to specialize.

Concurrent Practical and Theoretical Geometry. By W. J. POTTER, M.A. (Cantab.), Roan School for Boys, Greenwich. Published in Three Parts.

Part I. Lines, angles, parallels, triangles, parallelograms. Contains the substance of Euclid, Book I, 1-34, with additions on Symmetry, Loci, Division of a Line, and Scale Drawing. Crown 8vo, 194 pp. **Reduced Price, 2s. 6d. net.**

Part II. Circles, Inscribed and Circumscribed, Polygons, Areas. Contains the substance of Euclid, Books III, 1-34; IV, 1-9, 13-15; I, 35-84; II, 1-14, with additions. Crown 8vo, 256 pp. **Reduced price, 2s. 9d. net.**

Part III. Similar figures. Contains the substance of Euclid, Books VI, III, 35-37; IV, 10-12 and 16, with additions, including a course of Numerical Trigonometry. Crown 8vo, 274 pp. Price **3s. 3d. net.**

Parts I and II (together). **5s. 6d. net.**

Answers to the numerical and graphical examples in Parts I to III. Price **1s. net.**

"The propositions are preceded and followed by sets of practical and theoretical exercises. The bold type and clear arrangement of the different steps of the proofs of the theorem should do much to facilitate their comprehension. The book is sure to find favour."—*The School World.*

NOW READY.

PAULATIM: A Translation and Composition Book based on the Syntax of the Latin Complex Sentence. By PERCY H. REANEY, M.A., Classical Master, Sir George Monoux Grammar School, Walthamstow. Crown 8vo. Cloth, 256 pp. Price **4s. net.**

This book is designed to ease the transition from the primer to the Latin author. **It anticipates and embodies in a remarkable way the recommendations and findings of the recently appointed Committee on Classics.**

Its chief characteristics are: (1) Translation and Composition are treated side by side. (2) Rules are deduced from numerous examples. (3) The Latin passages are carefully selected from Latin authors to illustrate the construction dealt with, and continuous passages, complete in themselves, are chosen whenever possible. (4) Most of the exercises for translation into Latin are continuous passages. (5) More attention than is usual at this stage is devoted to the Latin Period and Oratio Obliqua.

A Complete Arithmetic. By M. EASTWOOD, B.Sc., University Extension Lecturer, and formerly Lecturer on Education at the University of Liverpool, and J. LIGHTFOOT, D.Sc., M.A., Author of "An Elementary and Intermediate Algebra," &c. Cr. 8vo, 588 pp., cloth. Price **6s. 6d.**

This book has been specially written for the use of Students preparing for those examinations in which the Theory of Arithmetic and Higher Arithmetic generally are subjects. The whole of the matter usually included in elementary and advanced Arithmetic is thoroughly revised.

Short Methods in Arithmetic. By M. EASTWOOD, B.Sc., and J. LIGHTFOOT, D.Sc., M.A., Author of "An Elementary and Intermediate Algebra," &c. Crown 8vo, 150 pp., cloth. Price **2s. 6d.**

Exercises on the Metric System. By A. W. WISE, St. James' School, Enfield Highway. A Series of Graduated Exercises, arranged according to the rules of Arithmetic, with Answers. Adapted for use in Day Schools, Evening Continuation Classes, and Students in Technical and Commercial Classes. Including copious Examples on the proposed new Decimal Coinage, together with a large number of Examples in Mensuration, and an Introductory Chapter on the Metric System. With Answers, **10d.** Also in Two Parts. **Elementary, 4d. Advanced, 5d.**

The Ancient Civilizations Series. By EMILY M. BURKE, L.L.A., Senior Mistress, Hornsey County School.

Book I.—THE SHINING EAST. Crown 8vo, 166 pp., with 32 Illustrations and Maps. Price **2s. 3d. net.**

"The Shining East" tells in simple language the story of Ancient Egypt, Babylon, Assyria, Media, and Persia, Tyre and Sidon, in short, of all those ancient peoples first made known to us by Bible reading.

Book II.—THE VIOLET CROWN AND THE SEVEN HILLS. Crown 8vo, cloth, 177 pp., with 11 Maps. Price **3s. net.**

"This is the story of the glory that was Greece and the grandeur that was Rome. . . . Miss Burke's is a pleasant method, for she never bores us with too many hard facts, and her historical outlook is that of a well-equipped scholar who is conscious that a good deal more than what old fashioned history books would have given is necessary to explain the ancient world. She talks rather than writes, quotes poetry, and can appeal when necessary to modern instances."—*The Times Educational Supplement.*

Book III.—THE OLD ORDER AND THE NEW. Being the story of **The Roman Empire and the Beginnings of Modern Europe.** Crown 8vo, cloth, 184 pp., with 7 Maps. Price **3s. net.** Full Prospectus on application.

"This well-printed book continues a series of which the previous volume deals with Ancient Greece and Republican Rome. The book is intended for pupils in the middle and senior forms of secondary and central schools, and is offered as of great interest to students in continuation schools. It is an excellent survey. . . ."—*The Times Educational Supplement.*

Detailed Prospectus of **HEATON'S SCIENTIFIC GEOGRAPHIES** and **Complete Catalogue** post free on application.

MR. HERBERT RUSSELL, 35 and 36 TEMPLE CHAMBERS, LONDON, E.C.4.

in University College, London. Is recognized both inside and outside this country as one of the leading physiologists of the world. Mr. C. F. de la Fosse, Director of Public Instruction, United Provinces. Dr. C. H. Firth, Regius Professor of Modern History at Oxford since 1904. Mr. R. S. Giles, Vice-Chancellor, University of Rangoon, Burma. Prof. F. W. Keeble, Sherardian Professor of Botany and Fellow of Magdalen College, Oxford. Prof. J. Macpherson, Professor of Psychiatry in University of Sydney, New South Wales. Medical Commissioner in Lunacy for Scotland, 1899. Mr. H. Sharp, Secretary to the Government of India, Education Department. Mr. W. Thomson, lately Registrar of the University of South Africa.

C.I.E.—Mr. C. J. W. Mayne, Indian Educational Service, Principal, Rajkumar College, Rajkot, Bombay.

IMPERIAL SERVICE ORDER, COMPANIONS.—Mr. W. H. Bulley, Inspector of Reformatory Schools, Home Office. Mr. W. J. Moulton, Law Section, Board of Education. Major A. W. J. Lynsdale, Acting Professor of Materia Medica, Medical College, Madras.

Miss I. L. RHYS, who retired from the Headship of the Belvedere Girls' Public Day School, Liverpool, at the end of last year, has decided to open a Girls' Preparatory School near London. She was appointed to the school as an assistant in 1903, and became Head Mistress in the following September. During the nineteen years of her tenure Miss Rhys has endeared herself to hundreds of girls and their parents and to the many members of her staff, who, perhaps more than any one else, have known the wisdom and devotion she gave to every matter which came under her notice. She was a leader in education in the North of England, and she has been proclaimed by the Council of the Girls' Public Day School Trust in their annual report as "one of the ablest Head Mistresses who have served the Trust."

ALL "Old Girls" of Aske's Haberdashers' School, Hatcham, will feel deeply the great loss sustained in the death of their old Head Mistress, Miss Connolly, for whom all connected with the School have the greatest admiration and affection. She was Head Mistress of Aske's Haberdashers' School, Hatcham, S.E., from its opening in September, 1875, and took an important part in the development of higher education for women. Miss Connolly had a strong and attractive personality, and great charm of manner, and dignity of bearing, that few could resist. Her intellectual power, earnestness of purpose, and high principles inspired admiration and respect in all, and affection and loyalty as well in those who felt the extreme kindness that lay beneath her dignified manner. Madam, as she was affectionately called, had the entire confidence of the parents and committee, the loyalty and devotion of her mistresses, and the reverence and obedience of her pupils. She inspired pupils and staff with her own energy and perseverance, and inculcated high ideals of duty, loyalty, and honour. Her influence lives in the valuable work which is being done by them all over the country.

MR. CHARLES BICKERSTETH WHEELER, whose death at the age of 60 was recently reported, was a noted contributor to modern educational work. He was educated at Merchant Taylors' School and New College, Oxford, and articulated as a solicitor, but in 1885 he left the law to follow his natural inclination towards teaching, and became second master at Mercers' School, a post which he occupied for twenty years, retiring in 1911. This retirement was interrupted by the war, on the outbreak of which he volunteered to return to his work at Mercers' School. The overstrain of this work, increased as it was by the special constable duty he also undertook, no doubt contributed to the illness of two years which led to his death. His

MILLS & BOON, Ltd., 49 Rupert Street, London, W. 1.

IMPORTANT FIRST NOTICE. READY JULY 15th.

HEATH'S NEW PRACTICAL FRENCH GRAMMAR.

Time and usage are the real tests of a text-book.

The original Fraser and Squair "Practical French Grammar" attracted much attention and attained unprecedented popularity because, at a critical turning point, it gave new life and vital presentation to an old subject.

A pioneer of its time, it brought the subject into accord with the best-known advances in the method of modern language teaching. To-day, the book is recognized as one of the premier manuals in the field of effective French instruction.

The New Grammars—Part One and Complete—aim to adapt the study of the fundamentals of French to the ability of the average beginner in Secondary Schools.

They are committed to no theory of methods, unless it be an insistence upon spoken French, in combination with that substantial knowledge of grammatical forms which is essential to all accuracy of work. Each of the thirty-nine Lessons in Part I consists of short statements of grammatical principles that are stripped of all technicalities, and are exemplified in interesting reading matter, couched in the vocabulary of commonest use. Copious Exercises of most varied nature lead the way to sentence building and greater self-expression.

SYNOPSIS.

(1) *Useful Classroom Expressions*.—Fifty typical expressions have been chosen for their immediate usefulness to students.

(2) *Pronunciation*.—Phonetics is taught unobtrusively and by means of unique Exercises in Pronunciation.

(3) *Grammar*.—There is a simple and harmonious survey of essentials and a gradual approach to syntax which is summed up in the Reference Grammar of the Complete Edition.

(4) *Reading*.—Continuous, lively, and rational passages, and a number of Anecdotes furnish ample and suitable elementary reading.

(5) *Exercises*.—No principle is presented without the provision of generous and ingenious exercises.

(6) *Vocabulary*.—Simple, practical, and concrete. Six formal Vocabulary Reviews, grouped at suitable stopping places, sum up the work of the preceding pages.

SECTION ONE. Crown 8vo, 342 pages, strongly bound, 3s.

A book for beginners. PART I.—(a) Concise Grammar Rules, practical Reading passages, Direct-method Exercises, Lesson Vocabularies, Exercises in Pronunciation, formal Review Exercises; (b) Selected Anecdotes for Reading and Drill. PART II.—The Verb, paradigms and tables of Regular and Irregular Verbs. PART III.—Vocabularies, with phonetic transcription.

COMPLETE. Crown 8vo, 592 pages, strongly bound, 5s.

SECTION ONE as above, combined with the Systematic Grammar, Syntax, and Exercises, for later study and reference.

GEORGE G. HARRAP & CO., Ltd.,
2 and 3 Portsmouth Street, Kingsway, London, W.C. 2.

intellectual activities, besides his professional, were many. He was a keen Fabian; he was at one time interested in the work of the Society for Psychical Research, and he was a member of the Stage Society. His first book, published under the title of "Wedges," consisted of articles on philosophical and social questions which had appeared in the *Nineteenth Century*, the *Hibbert Journal*, and other periodicals. Later on most of his leisure was spent in extraordinarily careful and complete editorial work upon school texts of the English classics for the University Press. Of many of these he was sole editor—Thackeray's "English Humourists," Marlowe's "Doctor Faustus," and notably an edition of Palgrave's "Golden Treasury." At the time of his death he was general editor of a new issue of the novels of Sir Walter Scott, for whom he had a great and lasting admiration. His interest in literature was in the subject rather than the style, in the argument rather than the voice. He was anxious both to teach and to learn. He held that life was meant to develop fine character as shown in the growth of and obedience to the laws governing the universe. Besides intellectual activity, he delighted in physical. He was a great cyclist (he obtained his "half-Blue" at Oxford, and the number of roads on his maps scored as travelled was remarkable) and an enthusiastic climber.

ONLOOKER.

CORRESPONDENCE.

SCRIPT HANDWRITING

To the Editors of *The Journal of Education and School World*.

SIRS,—What is wrong in connection with script handwriting is not the formation of the letters, but the prejudice which hampers its general adoption.

No greater handicap in the efficiency of the clerical side of a business can be imagined than the ill-formed illegible scrawl too characteristic of the so-called education given at the rate-payers' expense.

On the other hand, in sloping script, attention is concentrated on the formation of each letter to the extent that the result is not only clarity, but symmetry.—Yours, &c.,

CHARLES MARSHALL.

2 Ranelagh Avenue, Hurlingham, S.W. 6.

EDUCATION IN WELWYN GARDEN CITY.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—Many readers of the *Journal* will be interested in the proposed scheme of educational organization at Welwyn Garden City, Hertfordshire. An *ad hoc* body called the "Welwyn Garden City Educational Trust" has been set up to act as the intermediary between the Education Committee of the Hertfordshire County Council, and the schools in Welwyn Garden City.

The Welwyn Garden City Company and the New Town Trust have together taken steps to form this Trust, whose object will be to initiate and develop an educational programme for the town, adapted to its special aims and needs, and to help to provide the means for carrying out such a programme. It will not primarily be the duty of the Trust to provide the normal educational equipment of the town. This will be the business of the Local Education Authority acting in conjunction with the Board of Education. But it will be the business of the Trust to represent the inhabitants of the City and to help in determining how the normal provision can best be adapted to their needs and ideal, and to supplement and support this provision in every way possible.

When the Trust is established in its final form it is proposed to incorporate it as an association on a non-profit-making basis. Its membership will consist of inhabitants of the Garden City who pay an annual fee of one shilling to its funds, together with any persons whose interest in the scheme may induce

(Continued on page 434.)

McDougall's

Books are increasingly appealing to Teachers in Secondary Schools, because of their sound and accurate Scholarship—excellent get-up—and extreme reasonableness in price. Some Recent Issues are:

PROBLEMS AND QUESTIONS IN PRACTICAL MATHEMATICS.

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the **SUMMER VACATION** for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the **MEDAL** of the **ROYAL SANITARY INSTITUTE**,

and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods — which is even of greater hygienic importance.

"FLORIGENE" has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W. 1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

them to assist the movement by donations to the Trust of not less than £100, or by an annual subscription of not less than £1.

The work of the Trust will be conducted by an Executive Committee consisting of six persons elected from the body of the citizen members; not more than three representatives of the non-resident members, and three co-opted members. This Executive Committee will be supported by a Council of men and women of the highest standing in the educational world.

In such a new town as Welwyn Garden City, particularly in the early stages of its development, class distinctions will possibly be less rigid and less marked than usual, and it is probable that with the trend towards the greater equalization of effective incomes, there will be a tendency for more families to make use of the public educational institutions. Nothing would be more calculated to preserve a fine civic spirit and *esprit de corps* in the town than this tendency. It would safeguard the community against sectionalism and the misunderstandings of social divisions, and it is hoped that by supplying the fullest and best form of education; by the careful selection of teachers; and by real efficiency, a common educational system may become more nearly practicable than has hitherto been the case.

This full provision of education for all will necessitate, to a large extent, the obliteration of the present customary but illogical distinction between grades and types of schools labelled by different names, elementary, central, secondary, technical, and the like. The system which it is hoped to introduce at Welwyn will provide opportunities for each child born in the city to begin, and to carry through, his or her education from its earliest phases to the most advanced courses of tuition and training which may be suited to individual capacity and genius. A harmonized and graded curriculum in all the branches of the one school system (with many degrees of freedom) may help to make such an educational ladder possible, and easy of ascent.

The Trust will also seek to break new ground. Such, for instance, will be the linking up of the educational life of the young citizens with the industrial, commercial, and agricultural life of the town, and the development of the city's interest in art, music, literature, and drama. In addition to arranging special classes, or conferences, on current educational and social topics, the Trust will hold itself ready to help in the formation of clubs, or of study groups, for the promotion of the arts and crafts, and for musical, dramatic, literary, or other work. It will also aid in the provision of libraries, museums, theatres, newspapers, and other social institutions of like nature.

So much for organization—the spirit, and methods, of education will be unity and freedom. For, just as the child is naturally central to the family, so the “school” will be central to the “city”; and, by the “school” is meant the whole organized and unified provision made for helping the young to develop their individual capabilities and for their initiation into the association of human society. In this connexion the widest meaning will be given to the term “young.” It will include those of every age who may be willing to grow in power or skill or knowledge.

The aim of the teachers immediately concerned with the pupils in the schools will be to train them for freedom and fellowship—freedom to develop all that is good, in a healthy physical and moral atmosphere, yet subject to the ties and responsibilities of good fellowship, *i.e.* good citizenship.

The enterprise is in the making. It is not all “cut and dried.” It must follow the laws of all organic development. It must grow, and it must evolve. There is room for the constructive work of the real teacher. There is no room for the mere iconoclast or for the one-idea’d crank, or for the faddist. There is room for children who are wanted to help in the working out of the scheme. Parents who desire to have a voice in their children's education will find room and opportunity at Welwyn. And the philanthropist who wishes to endow a public school (*i.e.* a school for the use of the public) will find in Welwyn his golden opportunity.—Yours, &c.,

“Noddfa,” Wistaston, Crewe.

Bedford Court, Bedford Street, Strand,
LONDON, W.C. 2.

From EDWARD ARNOLD & CO'S List.

A complete History for the use of Lower and Middle Forms in Secondary Schools.

OUTLINES OF BRITISH HISTORY.

By G. BURRELL SMITH, M.A., Chief History Master at Repton School.

With 22 New Maps. Complete, 6s. Part I, to 1603; Part II, 1603-1914. 3s. 6d. each.

Mr. G. Burrell Smith's earlier Books, "Outlines of European History, 1780-1914," and "Scenes from European History," are already well known for their lucidity of style and their power of interesting young readers no less than for their thorough grasp of the essentials of the history of the periods which they cover. In this new volume the author traces with the same skill and mastery of his subject the growth and development of Britain from the earliest times down to the beginning of the Great War.

The late Sir Walter Raleigh, Professor of English Literature in the University of Oxford, had intended to write an Introduction to this collection. His death, however, prevented him from carrying out his purpose, and the book is therefore issued without his introduction.

**MOUNT HELICON. A NEW ANTHOLOGY OF
VERSE FOR SCHOOLS.**

320 pages. Cloth, 2s. 6d.

This new and comprehensive collection of the greatest poetry in the English language from the sixteenth century down to the present day includes about 60 copyright works by writers of such calibre as Stevenson, Swinburne, Hardy, Bridges, Francis Thompson, Newbolt, Kipling, De la Mare, Davies, Noyes, Wainfold, Drinkwater, and Rupert Brooke.

BOOKS ON MATHEMATICS.

BLACKIE'S SELECT LIST

In these days of economy experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction and Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. 3d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater Plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known "Junior School Shakespeare," which omits everything that might be thought undesirable in class reading. Price 6d. each.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.,

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and aesthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

THE WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. 6d. each.

THE GROUNDWORK OF THE WAR.

By C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College. 1s. 6d. net.

Prepared specially for a concluding section of "The Groundwork of British History." It brings that work down to 1921.

THE STUDY OF ENGLISH. A NEW SERIES.

A BOOK OF ENGLISH PROSE. By S. E. WINBOLT, M.A. 2s. 6d.

ENGLISH PROSE AND VERSE. An Anthology. Arranged and annotated by R. F. PATTERSON, M.A., formerly Foundation Scholar, St. John's College, Cambridge; Charles Oldham Shakespeare Scholar. 2s. 6d.

A SURVEY OF ENGLISH GRAMMAR. By S. E. WINBOLT, M.A., Christ's Hospital. 2s.

A COURSE OF ENGLISH COMPOSITION. By S. E. WINBOLT, M.A. 2s. 6d.

THE GOLDEN BOOKS OF ENGLISH VERSE. A Graduated Course for Class Study. With full teaching equipment. Arranged by FRANK JONES, B.A., Senior English Master, King Edward's School, Aston, Birmingham. In three Books 2s. 3d. each.

BLACKIE'S COMPACT ETYMOLOGICAL DICTIONARY. Prepared by RICHARD JOHN CUNLIFFE, M.A., LL.B., Author of "A New Shakespearean Dictionary." 1s. 6d. net.

Prospectuses giving full particulars of above publications post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C. 4.
AND AT GLASGOW AND BOMBAY.

BLACKIE & SON'S NEW LIST

SCIENCE.

APPLIED CALCULUS. By F. F. P. BISACRE, O.B.E., M.A., B.Sc., A.M.Inst.C.E. Large crown 8vo. xvi + 446 pp., with Answers, including 106 figures, and 17 half-tone portraits of celebrated mathematicians and physicists. Price **10s. 6d. net.**

This book has been specially written for science and engineering students who desire to acquire a working knowledge of the calculus but whose preliminary mathematical equipment is slight.

PLANE GEOMETRY. An Account of the more Elementary Properties of the Conic Sections, treated by the Methods of Co-ordinate Geometry, and of Modern Projective Geometry, with Applications to Practical Drawing. By L. B. BENNY, M.A. (Cantab.), B.A. (Lond.), F.R.A.S., sometime Mathematical Scholar of Christ College, Cambridge; Head of the Mathematical Department of University College, Exeter. Large crown 8vo. viii + 336 pp., with Answers, 145 figures, and 5 half-tone portraits of celebrated mathematicians. Price **10s. 6d. net.**

This book covers completely the course in Geometry for the B.Sc. Pass Examination of London University in Pure Mathematics.

APPLIED GEOGRAPHY. By ALEXANDER STEVENS, M.A., B.Sc., Lecturer in Geography, Glasgow University. Crown 8vo. Price **6s. net.**

For those who propose to enter the professions of the sea, surveying, engineering, prospecting, &c.

AN ELEMENTARY TEXT-BOOK OF COAL MINING. By ROBERT PEEL. *New Edition*, revised and enlarged by DANIEL BURNS, M.Inst.M.E., Professor of Mining, Royal Technical College, Glasgow. Crown 8vo. Price **6s. net.**

FUEL AND REFRACTORY MATERIALS. By A. HUMBLDT SEXTON, F.I.C., F.C.S., Past President of the West of Scotland Iron and Steel Institute, &c. *New Edition*, completely revised and enlarged by W. B. DAVIDSON, D.Sc., Ph.D., F.I.C. Large demy 8vo. viii + 382 pp., with 111 figures. Price **12s. 6d. net.**

This book is a completely revised new edition of the well-known work by A. Humboldt Sexton. The revision has been done by Dr. W. B. Davidson, who, as a technical chemist, has made a practical study of the industrial uses of fuel and refractory material.

METEOROLOGY: An Introductory Treatise. By A. E. M. GEDDES, O.B.E., M.A., D.Sc., Lecturer in Natural Philosophy in the University of Aberdeen. Large demy 8vo. xx + 390 pp., with 4 coloured plates, 16 half-tones, 103 figures, 11 charts, and 29 tables. Price **21s. net.**

AN INTRODUCTION TO ANALYTICAL CHEMISTRY. By GEORGE G. HENDERSON, D.Sc., M.A., F.I.C., Professor of Chemistry, Glasgow University; and MATTHEW A. PARKER, B.Sc., Professor of Chemistry, University of Manitoba, Winnipeg, formerly Lecturer in Chemistry, Royal Technical College, Glasgow. With Coloured Plate. **5s. net.**

ELEMENTARY ELECTRICAL ENGINEERING. By J. W. SHAXBY, B.Sc., Demonstrator and Assistant Lecturer, University College of Wales, Aberystwyth. Profusely illustrated with Photographs and Diagrams. **4s. net.**

THE FOUNDATIONS OF CHEMICAL THEORY; The Elements of Physical and General Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Professor of Inorganic and Analytical Chemistry in the Royal Technical College, Glasgow. Large demy 8vo. viii + 266 pp., with 46 figures. Price **12s. 6d. net.**

"Professor Caven's clear exposition of Modern Chemical Theory, though mainly intended for use as a text-book, will interest laymen who have not followed the developments of chemistry with close attention. Unlike the ordinary treatise, the book seeks to emphasize general principles rather than to record a mass of facts."—*Spectator*.

A TEXT-BOOK OF ORGANIC CHEMISTRY. By A. BERNTHSEN, Ph.D. New Edition, revised to date by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C., Professor of Organic Chemistry in the Indian Institute of Science, Bangalore. Large crown 8vo. Price **12s. 6d. net.**

A GENERAL TEXT-BOOK OF ELEMENTARY ALGEBRA. By E. H. CHAPMAN, M.A. (Cantab.), D.Sc. (Lond.), late Senior Mathematical Master at Christ's College, Finchley, N., Chesterfield Grammar School, Blackburn Grammar School, and King Edward VII School, Lytham. Large crown 8vo.

This Algebra will be completed in three parts, and will cover the whole of the ground in Algebra for London B.Sc. Pass Examination in Pure Mathematics, and similar examinations.

PART I.—Elementary Rules, Graphs, Equations. With Answers, **3s. net.** Without Answers, **2s. 6d. net.**

PART II.—With Answers, **3s. 3d. net.** Without Answers, **2s. 9d. net.** PART III.—*In preparation.*

ELEMENTARY MENSURATION OF SOLIDS. By R. W. M. GIBBS, B.A. (Cantab.), B.Sc. (Lond.). Crown 8vo. Price **3s. net.**

The old-fashioned problems about volumes of oblate spheroids and spheres inscribed in oblique cones have given place to calculations of the weight of the steel crank-shaft of a motor-car, and so on.

SCIENTIFIC METHOD: Its Philosophy and its Practice. By F. W. WESTAWAY. *New Edition*. Large Crown 8vo. xxiv + 426 pp., with 24 figures. Demy 8vo. Price **10s. 6d. net.**

"Mr. Westaway has a singularly acute and active mind which has engaged itself with almost all branches of human study; and he has the rarest of all gifts among English speaking philosophers, that of directness and lucidity of style."—*Times*.

SYSTEMATIC INORGANIC CHEMISTRY from the Standpoint of the Periodic Law. A Text-book for Advanced Students. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Principal of the Technical College, Darlington; and G. D. LANDER, D.Sc. (St. Andrews and London), Professor of Chemistry, Royal Veterinary College, London. **7s. 6d. net.**

A COURSE OF PHYSICS. Practical and Theoretical. By CHARLES H. DRAPER, B.A., D.Sc. Complete, **5s. net.**

In Two Volumes, **3s. each.** I, Elementary Physical Science, Mechanics, Heat. II, Sound, Light, Magnetism, and Electricity.

In separate Sections, **1s. 9d. each.** Elementary Physical Science, Mechanics. Heat. Sound and Light. Magnetism and Electricity.

NEW AND REVISED EDITION.

MAGNETISM AND ELECTRICITY. Including the Principles of Electrical Measurements.

By S. S. RICHARDSON, B.Sc., A.R.C.Sc., Head of the Physics Department, Central Municipal Technical School, Liverpool. **6s. net.**

"Mr. Richardson is to be congratulated on the success which has attended his efforts. . . . The book is an admirable one."—*Electrician*.

ELECTRICITY AND ITS PRACTICAL APPLICATIONS. A Text-book of Electrical Engineering. By MAGNUS MACLEAN, M.A., D.Sc., Professor of Electrical Engineering in the Royal Technical College, Glasgow. **12s. 6d. net.**

SYSTEMATIC QUALITATIVE ANALYSIS.

For Students of Inorganic Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Principal of the Technical College, Darlington. **5s. net.**

THE CLARENDON SERIES

OF

LATIN AND GREEK AUTHORS

PARTLY IN THE ORIGINAL & PARTLY IN TRANSLATION
UNDER THE GENERAL EDITORSHIP OF
R. W. LIVINGSTONE

Extract from the Preface to Caesar, Books IV & V

"The present edition springs from two years' public-school experience during the War.... The idea - which I believe to be new - is to translate about two pages of Caesar into English for every one page that is left in Latin. There is no idea of making Caesar easier: I have only tried, as far as is consistent with preserving the due proportions of Latin and English, to retain in Latin the most interesting and typical passages. The lesson to be prepared will be a portion of Latin and a portion of English. The amount of the translated passages in the lessons will vary somewhat; but there is no reason why lessons should be mechanically uniform, and I do not think that any real difficulty will arise in this connexion."

Extract from review of Caesar's Gallic War IV-V in the *Classical Review*

"The editors have done their work well, as might be expected. The notes are not too long and are scholarly. Schoolmasters would do well to make trial of the book; it is one of the best of its kind we have yet seen."

THE CLARENDON SERIES

OF

ENGLISH LITERATURE

The series has been designed to present, within single volumes, a representative selection from the greatest authors together with the best criticism of their work. The Delegates have secured the services as General Editors of Mr. D. Nichol Smith and Mr. A. M. D. Hughes, and have in preparation volumes on Sir Thomas More, Spenser, Bunyan, Dryden, Addison, Swift, Defoe, Pope, Gray, Gibbon, Coleridge, Byron, Shelley, Carlyle etc.

ESSAYS ON GOLDSMITH by Scott, Macaulay, and Thackeray and Selections from his Writings. With an Introduction by G. E. Hadow and Notes by C. B. Wheeler 4s. net

MILTON, POETRY AND PROSE. With Essays by Johnson, Hazlitt, Macaulay. Introduction by A. M. D. Hughes, and Notes by various Scholars. 3s.6d. net

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

VII.

MATHEMATICS.

BY PROFESSOR T. P. NUNN.

IN mathematics the supplementary aids to class-room work are of two kinds: on the one hand, various types of "practical mathematics," such as surveying; on the other, devices to assist the process called in German "Anschauung," i.e. making abstract ideas more easily apprehensible by embodying them in models and diagrams. What I have to say will generally be about the second kind; but the two are often indistinguishable and I shall not labour the difference between them. For instance, the ancient abacus is best regarded as belonging to the second kind; for though it is still extensively used in out of the way corners of the world as a calculating device, a western teacher will generally use it as a means of explaining to young children the "place-values" of numbers. But the slide-rule belongs at once to both kinds; for it is not only a computing instrument but also an excellent means of making clear the nature of logarithms.

I.

Material devices for teaching the rudiments of number-lore are of great antiquity and have become too numerous and varied for description. In recent years much ingenuity has been devoted by infants' teachers to the invention of apparatus by which children may to a large extent teach themselves. Dr. Montessori's "long stair" (which belongs to the same family as the much older Tillich's bricks) is now widely known, but many other devices, some of considerable value, are to be found in good infants' schools.

The institution registered under the name "Auto-Education" (93 Great Russell Street, W.C. 1) supplies some of these newer forms of apparatus at a low price; the others must be sought either in the class-rooms where they are in use or in the excellent exhibitions by teachers which are held from time to time. Akin to devices for aiding "individual work" are the games intended to lure children into familiarity with the addition and multiplication tables. Professor D. E. Smith has described many of these, particularly those that can claim ancient lineage, in his *Number Games and Rhymes* (Teachers' College, Columbia University), and the infants' schools of this country have recently produced a rich crop of new ones.

Most modern teachers use the foot-rule, divided into inches and quarters or eighths, in explaining the nature and use of fractions. Dr. William Garnett once suggested that for "drill" in this subject children should be supplied with simple slide-rules consisting of a movable ruler sliding against a fixed one. The apparatus gives directly the solution of a great variety of problems in addition and subtraction of fractions, and at the same time makes the learner familiar with the principles required to solve them by calculation.

In teaching the decimal notation for fractions two simple devices will be found useful. (i) From a metre rule are cut several decimetres, several centimetres, and a few smaller pieces containing different numbers of millimetres. With these it is easy to show how well decimal fractions lend themselves to the process of determining and recording a magnitude to any required fineness of approximation. For instance, the blackboard may be shown to be between 1 m. and 2 m. long, then between (say) 1.3 m. and 1.4 m., then between 1.35 m. and 1.36 m., and finally between 1.357 m. and 1.358 m.; the units needed for the demonstration being laid end to end across the board. The determination of a weight in metric units illustrates, of course, the same principle. (ii) A number of small wooden squares are inscribed with the digits from 0 to 9. A selection from them is placed on a narrow shelf (e.g. a long rule resting on the pegs which support the blackboard) so as to make, for instance, the number 23.64—the decimal point being represented by a drawing pin. The result of multiplying or dividing the number by a power of 10 is illustrated very vividly by pushing the series of blocks bodily to the left or the right—one place for each successive operation by 10. The method brings out well the rule that in multiplication and division it is the digits which move, not the decimal point.

II.

In geometry (including mensuration) there is practically an endless scope for supplementary aids, and I must deal with some of the opportunities very cursorily. (i) The making of paper and cardboard models of familiar objects, toys, &c., is often recommended but quite insufficiently practised. It offers the best possible means of interesting beginners in common geometrical figures and their salient properties, of teaching the skilful use of the constructions for drawing parallels and perpendiculars, and for the bisection of lines and angles, and of cultivating the apprehension of three-dimensional space—a power which is too often sadly neglected in the school course. (ii) In the second stage of the subject the importance of what I once proposed to call "boy scout geometry" can hardly be over-emphasized. As the name implies, the work includes outdoor exercises in mensuration and surveying, conducted by means of the chain and cross-staff, the plane table and compass, and some simple anglemeter or theodolite, followed up in class by the solution of problems by drawing. (iii) Simple mechanical devices may often be used with good effect to illustrate the ordinary theorems of geometry. Here are a few examples. (a) Frames composed of wooden rods freely jointed at their ends by screws are useful in bringing out the conditions which determine the shape of a figure. It is, for instance, seen at once that a frame composed of four given sides may assume an endless

number of shapes, while the shape of a triangle is unambiguously fixed by the lengths of its sides. (b) A short length of expanding lattice-work (such as is sold for fencing gardens) serves well to exhibit the properties of a series of parallel lines and of parallelograms. (c) The mutual intersection of the diagonals of a parallelogram is shown by a freely jointed wooden frame the opposite corners of which are connected by elastic threads. A cell or parallelepiped made of cardboard will illustrate the corresponding theorem for three dimensions. (d) The constancy of the angle in a circular segment is rather strikingly shown by drawing a circle on the blackboard, attaching the ends of an elastic thread to two points of the circumference by means of drawing pins, and then pulling the thread taut by a pencil whose point follows the arc between the two pins. (e) There are several well-known proofs of Pythagoras's theorem by dissection; these are best taught by requiring the pupil to piece together figures cut out of cardboard or wood, after the manner of a "jig-saw" puzzle. Mr. W. Huggett, head master of Wornington Road L.C.C. School, has devised a most entertaining as well as instructive model in which the pieces move to their places automatically as the operator presses a series of buttons. It would be an excellent thing if more moving models of this kind were at the disposal of teachers. (f) Some of the fundamental theorems in solid geometry (e.g. the theorem about the perpendicular to a plane) become extremely obvious when the pupil is permitted to demonstrate them from models instead of from perspective figures in one plane; and the construction of such models from cardboard and elastic thread offers very little difficulty. (g) The elementary facts about perspective should certainly be included in a school course and are easy to bring out by means of models. A beautifully illustrated little book by Dr. G. Wolff, *Mathematik und Malerei* (Teubner), is full of excellent suggestions with regard to this subject.

The basal properties of space connoted by the terms congruence, symmetry and similarity should be illustrated by models as well as by plane diagrams—indeed their nature is better understood when they are studied in three dimensions. For this purpose I employ a series of model houses constructed of cardboard and finished with all possible verisimilitude. Two houses, exactly alike, illustrate the fundamental truth that figures constructed from the same (unambiguous) specification are geometrically identical*; while the fact that figures may be "congruent" yet incapable of replacing one another is brought out by means of a third house related to the former as the right hand is related to the left. The idea of similarity between figures is illustrated by a fourth house precisely of the same shape as the others but on a larger scale. The great importance of the principle of similarity makes it desirable to exemplify it liberally. The use of the pantagraph to enlarge or reduce drawings, the magnification of a picture by the optical lantern and its reduction in the pin-hole camera are all suitable and interesting exercises.

Orthogonal and conical projection are topics that gain a great deal from material illustration, and should certainly have a place even in an elementary curriculum. For orthogonal projection one may use the rays of the sun (bent horizontally by reflection in a mirror) or arrange the lens of the optical lantern so that it emits a roughly parallel beam. Objects are held in the path of the beam and the class observes the forms of the shadows. One of the most instructive exercises consists in projecting figures illustrating properties of the circle so as to bring out the corresponding properties of the ellipse. The figures may be made by cutting paper to the required shape (e.g. a circle containing a series of parallel chords) and pasting it on a sheet of glass. For conical projection the light from an electric torch serves well enough, though better results may be obtained by placing over a small naked electric arc a tin pierced with two circular holes, so that the light

* See an article "On the Sequence of Theorems in Geometry" in the *Mathematical Gazette* (G. Bell) for May, 1922.

may generate in the dusty air a double cone. In either case the cone is to be cut by a flat sheet of cardboard on which the sections will be rendered visible.

III.

In teaching trigonometry, supplementary aid may be derived from geography, astronomy, and physics as well as from surveying. The connexion with geography brings in the neglected study of spherical geometry and a simple treatment of map-projections. Elementary work in astronomy involves many most instructive mathematical operations including the making of sun-dials. My own custom is to give an important place to the construction of (i) a cylinder and (ii) a cube, each covered with a network of lines (lines of right ascension and declination) upon which the positions of the heavenly bodies may be recorded and by means of which the nature of their movements may be studied. The study either of map-projections or of the "celestial cube" may be made the means of arriving with extreme ease at the fundamental formulæ of spherical trigonometry—again a subject undeservedly neglected in our schools.

The point of contact between physics and trigonometry is, of course, the study of harmonic motion and of harmonic waves. Both subjects lend themselves to illustration by experimental methods well within the power of an ordinary mathematical teacher, and the mathematics gains immensely from such illustration. Unfortunately it is not possible to deal with them here and I must take the liberty of referring the reader to what I have written about them—and also about map-projections and spherical trigonometry—elsewhere*.

IV.

Algebra, on account of its abstract nature, tends to degenerate into a mere juggling with symbols unless steps are taken to ensure *Anschaulichung*. For instance, it is well to lay stress on the fact that directed (*i.e.* positive and negative) numbers fix the position of a point on a line with reference to some zero-point. To make clear what this means a graduated line should be chalked in a convenient place on the class-room floor, and boys should be made to work out such operations as $-6+9-4$ by moving backwards and forwards along it. The vitally important idea of a function may well be taught by an extension of the same device. We have two graduated lines, and two boys whose duty is to move along them, one being called X the other Y. Y is informed that his position and movements on the line are to depend on those of X in accordance with some law which will be varied from time to time. For example, if the law adopted is $y=\frac{1}{2}x^2$, then Y's distance from his zero-point (y) must always be one quarter of the square of X's distance (x) from the zero-point on his own line. Thus, as X walks continuously from the positive end of his line through his zero-point to the negative end, Y, obeying the law imposed on him, advances from the positive end of his line to the zero-point, and then retraces his steps. The representation of the character of a function by a graph is best taken after this exercise. The graph brings the X and Y lines together and exhibits the way in which the positions of the two moving boys (or points) are correlated.

Just as the pupil should learn that a simple (or "real") directed number fixes the position of a point on a line, so he should learn that a complex (or "imaginary") number fixes its position on a plane. For this purpose a blackboard should be marked out either in squares or in radiating lines and concentric circles. With the former graduation it may be used to show the results of operating on complex numbers expressed in the form $u+iv$, while the second graduation is to be used when they are written in the form $r(\cos\theta+i\sin\theta)$. To represent the course of a function when the variables are complex instead of simple numbers the X and Y lines of the first exercise must be replaced

by two graduated blackboards. On one of these the positions of $X (=u+iv)$ will be marked, on the other the corresponding positions of $Y (=U+iV)$.

Since space has only three dimensions it is not possible to combine the X and Y surfaces of this last illustration into a model in the way in which the X and Y lines of the former illustration were combined into a graph. If, however, only one of the two variables is complex, the other being simple, we have only three dimensions to represent, and the thing can be done. For instance, if in the function $y=ax^2+bx+c$, x may have complex values ($u+iv$) but y must remain simple, then, as I have shown elsewhere, the whole set of corresponding values of x and y can be exhibited in a three-dimensioned graph consisting of two equal parabolas, head to head, the plane of one being at right angle to the plane of the other. The points of one of these curves show the "real," the points of the other the "imaginary" roots of the quadratic equation $ax^2+bx+c=0$, where the values of a and b are fixed but c may have any real value.

FOREIGN TRAVEL AS AN AID TO CLASSROOM WORK.

By C. McEvoy, M.A., Watford Grammar School.

IT may be said that in most favourably situated schools the custom of visiting neighbouring museums and scenes of historical, geological, geographical, or industrial interest, has long formed a regular, if unscheduled, part of the curriculum.* The psychologist would vindicate the practice by pointing out the resulting increase to the pupil of the apperceptive masses and the enrichment of the interpretation given thereby to the ordinary subjects of study. Mr. S. E. Winbolt in a recent number of *The Journal of Education* has well referred to "the value of the objective method in class teaching and the importance of the presentation of the thing itself because of the tendency of word symbols to become anaemic."

All these arguments apply with even fuller force to the value of foreign travel. Not only are there, in France, for instance, sites of historical and geological interest as plentiful as in Britain, and ancient remains better preserved, but there is the experience, indescribably valuable to the English boy, of entering into the atmosphere of a new country. That first experience is never forgotten, and becomes a lifelong commentary on the expanding experience of after days. Language, dress, manners, food, money, buildings, vehicles, streets, monuments, fields, and a thousand less considered trifles, give him a sense of actuality in his study of the language and history of the country that nothing else could possibly give. He learns, for instance, experimentally, that the incredible sounds of which he is so shy in the classroom are pronounced as a matter of course by everybody he meets, and that it is his insular pronunciation which creates amusement or perplexity. But he learns deeper lessons than this. By foreign travel the seed is sown, which, under favourable conditions may in time bear fruit in a new perception of his own country as well as a new perception of others, and may ultimately form a factor in that enlightened cosmopolitanism and international amity which all true teachers must everywhere desire.

In spite of these advantages, foreign travel as a supplementary aid to classroom work has remained, as far as the pupil is concerned, comparatively untried. There are two obviously practical difficulties. One is expense. The other is responsibility—the responsibility for the teacher of having the care of a number of young pupils at a considerable distance from home and exposed to all the

* *The Teaching of Algebra* (Longmans).

* Admirable work in this connexion has been done by Mr. G. G. Lewis. See his "Longer School Journeys" (Sir Isaac Pitman & Sons, 3s.)

possibilities of accident and illness. From the latter difficulty there is no escape; precautions may be taken, but the risk must be taken too. To deal with the matter of expense parties have occasionally adopted the method of camping out. Although by this means the expense may be considerably curtailed, there is the disadvantage that the tent has always to be carried from place to place, and forms, with the other impedimenta, no mean incubus; there is the additional disadvantage that it prevents that close contact with the life of the people that the more usual methods of travel allow. The party is of necessity segregated in country places and cannot mingle with the life of the towns.

The purpose of the present article is to show by reference to a recent actual experience what can be accomplished at a moderate cost in the way of foreign travel as an aid to classroom work in an ordinary secondary day-school. The writer makes no apology for giving details which experience has proved useful at critical moments and which may prove useful to others on similar occasions.

One of the chief incentives to the tour referred to sprang from a recommendation made by Mr. S. E. Winbolt. Ever since, at his suggestion, the excellent Perthes cartoons were used for the illustration of Caesar's operations before Alesia interest had steadily developed in the scene of the final subjugation of Gaul. The hint that part of the Easter holidays might be spent in exploring Alesia was taken up with enthusiasm. The idea developed into a programme of a nine days' tour, and an estimate was made of an inclusive cost of £8. It had been stipulated that the party should not consist of more than ten nor less than six: in response to a circular letter addressed to parents the ten boys were readily forthcoming, and the opinion was generally expressed that the estimate of cost was too low. As a matter of fact, by taking cheap Easter return tickets from London to Paris, by travelling third class, and by obtaining special terms from hotels beforehand, the whole expense for nine days and a half, including passports, worked out at about £7 10s. per head.

The itinerary was as follows:—

1st day. London, dep. 8.20 a.m. Paris, arr. 6.20 p.m. Tram to Opéra, thence walk by Place Vendôme to Rue St. Honoré. After dinner in one of the many restaurants there, across the Seine by Pont St. Michel to pension near the Sorbonne, with glimpses of Notre Dame and the dome of the Panthéon on the way.

2nd day. From the summit of the Eiffel Tower, picked out, as from a living map, points of interest to be visited. Tomb of Napoleon. Trocadero. Arc de Triomphe (inscription on the return of Alsace-Lorraine and grave of the *inconnu*). Champs Elysées and Place de la Concorde.

3rd day. Paris, dep. 7 a.m. Alesia, arr. about 11.30. After café and *croissants* at Hotel de la Gare walk to Alesia (1½ m.). Climbed to summit of Mt. Auxois, and from the base of the great statue to Vercingetorix picked out every point described so vividly by Caesar (*de Bell. Gall.* VII). The plain three miles broad: the horse-shoe ridge of hills encircling—*mediocri interjecto spatio*—the hill on which Alesia stands; the two rivers which ran at the foot of the hill—*subleuant radices collis*. The site of the great double wall of circumvallation in the plain below. An experience of the value of the objective method never to be forgotten. By help of excellent chart of site of Roman remains identified, in extensive Roman settlement adjoining, theatre, temple, villa with hypocaust, and remains of Roman road. Under courteous guidance of M. Fornerot, ingénieur of Marigny la Cahouet, visited and had explained remains of Gallic huts and the intensely interesting treasures in the Musée, e.g. fragments of domes of clay with which Gallic huts were covered still retaining traces of the leaves and twigs of osier on which they were imposed.

4th day. Alesia, dep. 7.20 a.m. Semur, arr. 8.45. Thence by road (18 m.) to Saulieu—pleasant open country with occasional sight of the violet hills of the Morvan

towards the south-west. The road interesting historically as the probable route of the Gallic army of relief from Bibracte. From Saulieu by train same day to Autun (Augustodunum)—the Celtic Rome.

5th day. In Autun. From Cathedral tower very picturesque view of the ancient town below: tomb of Divitiacus (*dit*) on the hillside and temple of Janus—an impressive mass of brickwork rising sheer from a green meadow—outside the city walls. Bibracte rising, a solemn hill, on the western horizon. After a visit to the Lycée and its classrooms and the playground where Napoleon played as a boy, a tour round the city walls: magnificent Roman gateways and very suggestive remains of a Roman theatre still retaining marvellous acoustic properties.

6th day. Musée in early morning. Dep. 10.20 for Avallon. Lycée and classrooms. Under guidance of one of the masters visited the churches of St. Martin and St. Lazare. The town an excellent example of a medieval city.

7th day. Avallon, dep. 10 a.m. for Sens, visiting on the way the finely placed city of Auxerre with its traditions of Napoleon and Joan of Arc and of Hun and Saracen invasion.

8th day. Sens (Agedincum) Cathedral and Roman wall. Lycée. Dep. Sens 11.3 a.m., arr. Paris 2.10 p.m. Place de la Bastille, Panthéon (fine frescoes which give a pictorial summary of much of the great French traditions).

9th day. In Paris. Notre Dame. Louvre. Théâtre Française to see Victor Hugo's "Marion de Lorme." Shopping in Rue de Rivoli.

10th day. Paris, dep. 7.10 a.m. London (Victoria), arr. 4 p.m.

It is a pleasure to record the interest shown in the tour by Mr. A. E. Twentymen, of the Board of Education, Whitehall. By his kind offices the French railway authorities granted a substantial reduction in fares, and this allowed of an extra day in Paris. Nor should acknowledgment be omitted of the eagerness of all the French people with whom the party came into contact to do the utmost in their power to render the tour easy and interesting: chief among these are M. Houtin, of the Ministère des Beaux Arts, Paris; M. Fornerot, of Alesia; M. Faye Principal du Collège, Autun; and M. Camburay, Principal du Collège, Avallon.

Of the stimulus of the tour to the party there were abundant evidences at the time in the delightful impromptu debates by the roadside and upon the railway, and in the eagerness with which each member wrote up his diary. It may safely be predicted that none of them will in the future open a French book or a Caesar without finding the most arid passages bubbling with fountains of interest drawn from sources which every year will seem to make more beautiful.

[Suggestions proved useful by experience for a nine days' Easter Tour: (1) Luggage—a rucksack containing bare necessities and including extra vest and socks, list slippers, soap in case, some cord, a thin diary and pencil. (2) A linen bag with tape for passport and tickets—this to be slung round neck and worn inside waistcoat. (3) Boots to be comfortable and preferably not new. (4) Light mackintosh and ordinary warm clothing. (5) School caps ensure easy identification in crowds. (6) Every member of party should be able to speak the language of the country and should know his address in the places visited. (7) Party not to number more than eleven, including leader. (8) Tour should include one good long walk through pleasant country. (9) Early to bed and early to rise.]

TEACHERS' REGISTRATION COUNCIL.—At the last meeting of the Council the following resolution was carried unanimously: "In the interests of education and to secure the efficiency of the schools the Council urges that the agreements set forth in the Burnham Reports should be fully maintained by all the bodies concerned."

UNIVERSITIES AND SCHOOLS.

ENGLAND.

The May number of the *University Bulletin* (6d.), published by the Association of University Teachers, reprints in parallel columns, from the estimates, the Government grants to Universities and Colleges for 1921-22, and for the following year, the totals being £1,416,000 and £1,169,000. The interim grants to Oxford and Cambridge of £30,000 each are included. The largest specific grant in the lists is £100,947 in 1922-23 for Wales, including its four colleges Aberystwyth, Bangor, Cardiff, and Swansea. If the grant for London and its colleges and medical schools were shown in the same way, the total would naturally be considerable. The University gets £19,000 in 1922-23, and the grants to the colleges and medical schools for the same year appear to add up to a total of £300,000, the largest grants being to the Imperial College, £67,500; University College, £59,000; and King's College, £46,000.

A curious sidelight was thrown on Oxford University government by the vote in Congregation, which rejected by twelve votes to eleven the preamble of a Statute proposing that the head of a college *shall* every term send to the University Registrar a schedule of the number of undergraduates attending various Honours courses. The point at issue appears to be the power of the University to *order* a college to do anything, however innocent, without submitting the statute to the King in Council, and obtaining the prior consent of the college. "To tell the Head of a College to do what he need not do is neither lawful nor reasonable," asserts Dr. Thomas Case in a letter to *The Times*.

The *Oxford Magazine* publishes a valuable article on Economy and the Royal Commission, by A. B. P., which points out, very wisely, that the main ideas which should govern all colleges are to keep out bureaucracy and her bastards and to live at peace with the City. The recommendations of the Royal Commission in regard to catering are discussed, proper emphasis being laid on the relation between cheap buying and overhead expenses. "The fact is that the cost of food in College is remarkably reasonable," and it is urged that before a new system is adopted, an ample margin in its favour should be evident. For true economy, the writer recommends the breaking down of "food rings" throughout the country, reduced rates, restricting the cost of licensed lodgings, preventing long credit, encouraging benefactions, and finally, ingeminating simplicity in and out of College, and not least in University circles.

An interesting and expert report on the Pensions Scheme for Assistants, Clerks, and Servants in University Departments was recently presented at Cambridge. The scheme, it will be remembered, is contributory and establishes a vested interest for each member. Mr. J. M. Keynes thought it might be advantageous that the fund should be under the full control of the University, pensions being granted according to individual circumstances. The general view of those who took part in the discussion was, however, in favour of the beneficiary's knowing his exact position. It was agreed that 4 per cent interest could not be guaranteed, this rate was used only for purposes of illustration. The question of the investment of the money by the Financial Board rather than by an Insurance Company was raised; also the question of the retiring age which some thought should be sixty-five with a possible extension to seventy. The question of deductions for income-tax received full attention. Mr. Fraser, an insurance expert, made the interesting admission that as between contributory and non-contributory schemes, "the whole trend of things during the last twenty years had been in favour of contributory schemes." Any one concerned in drawing up a pension scheme on contributory lines would do well to read this discussion, which is printed in *The Reporter* of May 30th.

Prof. Pollard has published in a letter to *The Times* a spirited reply to Dr. Little's criticism of the Bloomsbury site. He points out that the amount promised before the war for the purchase of the site, and the provision of buildings was by no means insignificant. He thinks the amount was about £250,000 apart from the £60,000 offered by the Drapers' Company for a Senate House; and adds, "these funds were diverted from the University by the opposition offered, and apparently it is being sought to repeat that signal achievement." The removal

of the University administration to Bloomsbury, however, was the considered recommendation of the Royal Commission, and is not the brain-wave of Mr. Fisher or of the Government at present in office. "What we really needed is peace from those who talk, and a fair chance to those who act."

Sir Gregory Foster, the Provost of University College, has published the two lectures on the University which he delivered recently at the College (University of London Press, 1s. 6d.) and has generously dedicated the royalties to the endowment fund of the University Union Society. The pamphlet will serve a useful purpose as a summary of the arguments in favour of the Bloomsbury site. An appendix gives a statistical statement from which it appears that out of a total of 21,000 students in the Colleges of the University, not less than 16,764 are in Colleges situated within two miles of the site. The sites of the thirty-six Colleges of the University occupy 212 acres; in addition, hostels occupy 7½ acres, and playing fields 215 acres, giving a total of 434½ acres. "There is no one who, with those facts in his mind, could think for a moment that any conceivable scheme for the improvement of the University of London could be based on bringing all these together." The site is for two specific purposes, the building of new Headquarters for the University, and for the removal of King's College. Mr. Fisher, in a speech delivered at the conclusion of the second lecture, pointed out that the Bloomsbury site had been accepted by the University, and was not really a matter for discussion. "The Government do not propose to make another offer, and if the University does not like the site, well it can return it to the source from which it came." Taking a bird's eye view of University education in the country as a whole—the first occasion possibly on which this has been accomplished by a Minister of Education—he admitted that the limit as regards students had already been reached at Oxford and Cambridge. London must, therefore, prepare for a great influx of students from home and abroad, from the Dominions, from India, from the Crown Colonies, from the United States of America, and from the Allied Powers of the Continent—a catalogue evidently prepared with care and forethought, though it postpones the day of educational reconciliation with our late enemies.

The Union Society has now taken possession of the wooden buildings in the University site behind the British Museum which have been purchased from the Young Men's Christian Association, with the consent of the University and of the Office of Works, and a general meeting was held there early in June. The contest for the Presidency resulted in the election of Mr. H. Toussaint, of Guy's Hospital. The annual report for 1921-22 records a membership at June 1, 1922, of 957, a very creditable total seeing that, pending the acquisition of premises, the benefits offered to members were somewhat nebulous. There was during the session, however, a good series of debates, at one of which the Speaker of the House of Commons, Mr. Whitley, who is a graduate of the University, presided; and other distinguished men have co-operated by speaking. Not least important of the *acta* of the year is the publication of No. 1 of the *Union Society Magazine*, edited by Mr. C. G. Parsloe. A competition, judged by Prof. Sir Sydney Lee, produced some creditable contributions by students, both in prose and verse, of which an imaginative essay entitled "The Philosophers," by E. W. Adams (Birkbeck College), is awarded the prize for prose, and a poem, "Napoleon on St. Helena," by Frank W. Howe (London Day Training College), the prize for verse. The accounts for the year showed that rare phenomenon, a balance at the bank.

SCOTLAND.

The Report of the Departmental Committee on Local Taxation in Scotland, to which optimistic educationists have been looking forward as likely to show a way out of an impossible situation, has proved on publication to be thoroughly disappointing. It is pointed out in the Report that the practice of rating on the basis of the ownership or occupation of real property is by general admission grossly inequitable, that beginning with the Education Act of 1872, which imposed a new burden on the rates, the inequity has steadily increased, and that the Education Act of 1918, coming at a time of great financial difficulty, has made the position intolerable. Yet, though everybody is agreed on all this, Lord Dunedin's Committee has not been able to do more than recommend a few comparatively unimportant modifications in the system. One of these is the rating for education not on a parochial basis,

but by an equal assessment over a county. This is so obviously right that one wonders that a course so much in harmony with the spirit of the 1918 Act was not followed in that Act. But after all a change like this is a small matter and does not touch the centre of the problem of educational finance. The real difficulty is that modern education is very costly, and when the greater part of the cost is thrown on the local rates, the ratepayer is apt to be unduly pressed or the schools to be parsimoniously managed. The only way of escape in the plan of education, or indeed of any vital social service of a local character, is through generous grants in aid from the Treasury. Unless these are forthcoming any system of local taxation is bound to be felt grievous, and to entail dangerous restrictions on necessary expenditures. If the Committee had explained this rather than contented itself with platitudinous recommendations about economy in local government without reference to the urgency of the social needs causing the heavy expenditure, it might not have solved the problem set to it, but it would not have been altogether a failure.

Most of the education authorities have appointed economy committees charged to devise ways and means of bringing down expenditure, and to consider the reduction of teachers' salaries.

Salary Reductions.

Glasgow, which set the pace in giving increases above the national minimum, seems to aspire to be the first in the reverse movement; and authorities and teachers over Scotland have been following with the closest attention the course of its negotiations with its staffs for a mutually agreed reduction to take effect from the beginning of July, knowing that a break in the best paid centre will inevitably be followed by breaks everywhere else. The Committee of the Authority which has the matter in hand began with a recommendation that the salaries of the administrative staff should be reduced 10 per cent, and then approached the Institute with the suggestion that the teachers should on their own initiative profess their willingness to accept a cut of $7\frac{1}{2}$ per cent as a kind of negative bonus for the coming year. The proposal was referred to a delegate meeting of teachers which decided by a large majority for negotiation on the point. But the teachers' representatives, on meeting the Authority's Committee and asking for a justification of the request for reduction, found themselves up against a stone wall. It was admitted that even without the cut in salaries the rates for the coming year would be reduced over a shilling, but it seemed to be considered sufficient argument to say that the rates must be brought down still lower, and that that could only be done with the lowering of the agreed salary scale. The delegate meeting, when the case was again referred to them, gave an overwhelming vote for rejecting an agreed reduction. The next move is with the Authority. There has been talk of a wholesale dismissal of teachers with subsequent re-engagement on the lower level of salary. But apart from the legal difficulties involved in this procedure by the fact that the teachers must be dismissed in statutory form as individuals, the Authority is wise enough to know the harm that would be done to its relations with its teachers by any high-handed action, and to prefer to continue negotiations on a different footing.

The Scottish Socialist Teachers' Society, a body small in membership but great in influence, has issued a manifesto on the Glasgow situation. In this document it is pointed out, quite truly, that what is at stake is not simply a reduction

The Socialist Teachers' Manifesto.

in Glasgow, but the maintenance of the Minimum National Scales over Scotland. Glasgow's scale was so generously conceived that a $7\frac{1}{2}$ per cent reduction would still leave everybody above the national minimum, but in most authorities that is not the case. The minimum must come down before there can be any substantial economy over Scotland. As a counter movement to the movement for lower educational expenditure, it is suggested that if the interest on the National Debt which has increased in value with the fall in prices, were cut down from 5 per cent to 4, there would be plenty of money available for better salaries, smaller classes, and universal secondary education. Aside from the delicate question of the relative importance of national expenditure on interest and on social services like education, this contention is surely open to the objection that it would involve the penalizing of one particular section of interest receivers. If teachers protest against being singled out for salary reduction, they must be prepared to apply their logic impartially. As a matter of fact most teachers are not concerned with the question of alternatives to economy on education at all, and the public interest requires that as a class they should not be forced into any common policy in this matter. That is a reason for both

central and local governing bodies avoiding a line of action that will embitter teachers. A contented body of teachers is one of the conditions of social stability under modern conditions.

Scottish teachers learned with pleasure that their own M.P., Mr. D. M. Cowan, had been called to give evidence before the Committee which inquired into the alleged obligation of the Government to maintain the non-contributory system of superannuation as an integral element of the Burnham settlement. As what he had to say related to the proceedings that led up to the institution of the Minimum National Scales by the Scottish Education Department, it only bore indirectly on the question at issue. But so far as it went it certainly strengthened the case of the English teachers.

At a joint conference of teachers' and authorities' representatives in the Office of the Education Department, it seems, Sir Arthur Rose, speaking for the authorities, explicitly argued for a lower scale of salaries than the teachers asked for in view of the fact that teachers were to get deferred pay in the form of non-contributory pensions. That this was not simply a casual remark, as the Education Department appears to have suggested to the Government Committee, is proved by the fact that on various subsequent occasions the argument has been repeated both by representative men on the authorities and by the teachers' negotiators when charged with accepting too low a scale.

Draft copies of a revised version of the Regulations for the Training of Teachers have been circulated by the Education Department among the various bodies concerned. The most important changes contemplated are in the conditions for the certification of teachers in secondary schools. The Chapter V qualification has

New Regulations for the Training of Teachers.

hitherto been given to graduates holding any Honours Degree in the school subjects, and exceptionally to certain others, most notable of whom are students who, having attended honours courses without graduating, have been certified as having done the work on an honours' level. The Draft Regulations propose two changes here. In the first place, the requisite Honours Degree, whether in science or arts, must be of the First or Second Class; and in the second place, students not graduating with Honours must submit themselves to a special examination on the honours standard at the University. Both of these changes are thoroughly sound. Third Class Honours people are for the most part not good enough for secondary work. As for the certification of students who attended the honours classes in a subject, that was unsatisfactory for both professors and students. The new special examination (regarding which, by the way, the universities were not consulted though they are expected to conduct it) will ensure that all admitted to the higher reaches of secondary work are properly qualified. It is unfortunate, however, that the Education Department has not recognized the rich reserve of secondary teachers it has in those who take the new ordinary science degree, and in arts graduates of similar type. A student taking two subjects on a standard well above the ordinary degree standard, as the better graduates do, may not be a specialist on a par with an honours man, but he is probably as good a man mentally as a second class honours man, and he has the advantage of a wider range of knowledge and a better balanced curriculum by way of compensation. If such people had the chance of a Chapter V qualification, a good many of those whom the status and salary of an elementary school teacher fail to tempt into the profession, would be led to teaching as a career, to the advantage of primary and secondary school alike.

WALES.

The half-yearly meeting was held at Colwyn Bay with Alderman the Rev. D. H. Williams in the chair. The afternoon session was set aside to discuss two questions of educational

interest, namely, home work for pupils and the report on Classics. Principal Harris, of the Bangor Normal College, dealt ably with the question of home work. To illustrate his theory that the present tendency in the schools is to demand an excessive amount of time for the preparation of home lessons, he had amassed some very telling statistics, though it was not by any means proved that the strain in the Welsh schools is greater than it is in English schools. The report on Classics was well handled by Mr. J. C. Davies, the Director of Education for Denbighshire, and he was in general agreement with the resolutions already adopted by the Central Welsh Board and

The Central Welsh Board.

the Welsh County Schools Association. There was a consensus of opinion at the Conference that the remedy for the unsatisfactory condition of Greek lies mainly with the University, and it is gratifying to note that some of the University Colleges have already taken steps which will go far towards re-establishing the study of this language in the Principality.

The most important matter of general interest discussed at Colwyn Bay was a scheme propounded by the Hon. W. N. Bruce dealing with the inspectional powers of the Central Welsh Board. This Board is at present, under its scheme, empowered to inspect the Welsh Intermediate Schools only, and is debarred from entering the new Municipal Secondary Schools which have sprung into existence in Wales since the establishment of the Central Welsh Board. In several of the counties where the two types of secondary schools are to be found, this restriction has led to some friction and difficulty. Several attempts have been made in the past to remedy this, but always unsuccessfully, owing to the opposition of the Welsh Department. Mr. Bruce's plan is that the Board of Education and the Central Welsh Board should consult together to see how far it is possible for the two authorities to co-operate in dealing with certain types of schools and certain questions of curriculum. He suggested that occasionally the inspectors of the Board of Education should be invited to join with the inspectors of the Central Welsh Board, and that on the other hand, the inspectorate of the Central Welsh Board should co-operate in the inspection of municipal, secondary, and central schools as well as of training colleges. A small sub-committee will interview the Welsh Department and report on the proposal.

Arising out of the discussion on the report of the Board of Education on the Welsh Intermediate Schools, the Central Welsh Board has resolved to summon a conference to discuss the aims of education in Wales. Many educationists seem to have arrived at the conclusion that the modern curriculum is so wide that it cannot be treated properly without involving the pupils in much physical and mental strain. Whether this conference will succeed in discovering a way out of the present *impasse* or not, it is probable that a free discussion of the difficulties which confront the schools will be useful; and therefore it should be welcomed.

Considerable progress was made with the formation of a practical scheme for the establishment of this Council at the meeting held at Llandrindod Wells. The principle of the scheme has already been virtually accepted by the local authorities, and strong committees were appointed to consider the details. These sub-committees have evidently taken considerable trouble to devise a scheme which will overcome most of the objections which have been raised in the past, and they even appear to have solved the troublesome question of representation with fair success. It is recommended that the Council should consist of 219 members of whom 135 shall be representatives of local authorities, thus giving them a clear and substantial majority. An attempt was made to increase the representation of the teachers, and of the training colleges, but it was defeated mainly on the ground that the whole scheme of representation was such a delicate structure that it would be in danger of collapse if it was touched. Two suggestions as to the best method of bringing the National Council into being were made, (1) that the Government should be asked to transfer immediately to the council the powers and functions of the Minister of Education in all branches of education under his control in Wales; (2) that the delegation of these functions should be gradual and partial. The Executive Committee unanimously recommended the latter as more likely to be practical. They were also influenced in this direction by the Prime Minister's recommendation that Welsh members should introduce into Parliament a scheme for Parliamentary devolution, and by the publication of the Geddes' report. The fact that a scheme of devolution is in the field would naturally be used as an argument for postponing consideration of a wide scheme of educational autonomy. It was also felt that as a complete scheme of control would inevitably mean considerable expenditure of public funds, it would not be politic to proceed with it in view of the present demand for economy. For these reasons, it was resolved to proceed slowly and warily. The functions it is proposed that the Council should perform at first are fully set out in the Departmental Committee's report: the framing and administration of regulations, distribution of grants for elementary and for secondary education. It will also exercise important advisory powers. Four sub-committees

will be formed, (1) a University Committee; (2) Secondary Committee; (3) an Elementary Committee, and (4) a Finance Committee. There was much discussion on the financial proposals of the scheme as they constitute the foundation of the whole scheme. It is suggested that Wales should ask for six-eighths of the total sum spent on education in England and Wales. The passing of the Superannuation Act will complicate the financial problem very seriously, and therefore it is more than probable that in the event of Parliamentary sanction being obtained to the scheme, it will be necessary to reconsider the whole question of finances afresh. The present recommendations seem to be of a purely tentative character. Such is the main outline of an interesting scheme at its present stage of development. But whether it will be brought to fruition soon, is very problematical in the present economic condition.

This federation met at Llandrindod Wells under the presidency of Mr. Hopkin Morgan of Neath. It discussed the education of blind and deaf children, of children under five years of age, the finances of the training colleges and similar questions.

This Committee has now been duly formed, and its first meeting will be held at Shrewsbury on June 22nd. It has very important and useful functions to perform, as it is meant to discuss all the border-line questions between the University and the secondary schools.

IRELAND.

The Draft Constitution of the Irish Free State, issued on the morning of the general election, has the following clauses dealing with education: (1) All citizens of the Irish Free State (Saorstát Éireann) have the right to free elementary education (Art. 10); (2) No law may be made, either directly or indirectly, to affect prejudicially the right of any child to attend a school receiving public money without attending the religious instruction at the school, or to make any discrimination as respects State aid between schools under the management of different religious denominations, or to divert from any religious denomination or any educational institution any of its property, except for the purpose of roads, railways, lighting, water, or drainage works or other works of public utility, and on payment of compensation (Art. 8). Article 4 will have very considerable bearing on school curricula. It is as follows: The national language of the Irish Free State (Saorstát Éireann) is the Irish language, but the English language shall be equally recognized as an official language. Nothing in this article shall prevent special provisions being made by the Parliament (Oireachtas) for districts or areas in which only one language is in use.

Owing to the elections being fixed for June 16th, the commencement of the Intermediate Examinations was postponed for a week from June 13th to June 20th. They finished on Wednesday, June 28th. In accordance with the promise, made by the Dail Minister of Education, that the Interim Grant would be paid before the Intermediate Examinations, cheques of £50 were distributed to each of the Intermediate Teachers in the Free State who satisfied the requisite conditions. As the average payment last year was £30, there has been an increase this year by two-thirds, and teachers are indebted to Prof. Hayes for his successful efforts in thus recognizing their claims to increased remuneration. A grant made at a flat rate ignores, of course, the claims of length of service to better treatment, but it avoids all the inequalities of previous years when equally well qualified teachers received different amounts, and the material is not at present available for determining the length of service of all Irish Intermediate Teachers. The present year, it is hoped, is the last of the interim grant, and if Prof. Hayes is successful in the educational reforms which he has in view, there will be in existence next year a proper scheme of Intermediate salaries.

The Intermediate Board has not arranged to hold summer courses this year, but the Ministry of Education has arranged that Intermediate Teachers with a sufficient knowledge of Irish to profit by the courses will receive subsistence and travelling allowances if they attend courses at University College, Dublin, or University College, Cork. These courses will be conducted entirely through Irish. They will begin in University College, Dublin, on July 4th and end on July 28th. Classes will be provided in Elementary, Intermediate, and Advanced grades,

and the courses will be in Irish Literature and History, Mathematics, Physics, Latin, Modern Languages, Geography of Ireland, and Hygiene. The Department's courses are being held as usual in the College of Science in Science and Technical subjects, and will be conducted in English.

Ulster Secondary Schools.

In the North, as in the South of Ireland, the difficulties caused by past Government apathy and neglect are giving rise to much misgiving, and it is clear that they cannot be overcome immediately. The Secondary Schools in Ulster have made through the Ulster Head Masters' Association a very strong appeal to the Government to relieve their needs and to save the schools from the increasing enfeeblement which must for a long time lower the character of their work and their usefulness. The promised increase in the interim grant falls hopelessly short of the needs of the case, the salient feature of which is that the schools cannot secure or retain teachers in face of the competition of the better treated English and Scottish schools. They therefore ask for temporary additional or increased grants until the proposed legislation takes effect. The Northern Government, however, is proceeding slowly. The Marquis of Londonderry, the Minister of Education, has appointed another Committee for the purpose of making arrangements for the preliminary education, training, and certification of teachers for various grades of schools in the six counties. The Chairman is Rt. Hon. H. M. Pollock (Minister of Finance) and the other members are Dr. Garrett (Senior Inspector), Mr. W. Haslett (Head Master of the Model School, Belfast), Mr. R. M. Jones (Head Master of the Royal Academical Institution, Belfast), Major Stanley (Principal of the Municipal College of Technology, Belfast), Mr. Bonaparte Wyse (Assistant Secretary to the Minister of Education), Prof. Wilson, and Rev. W. A. Watson. Meanwhile the Northern Ministry propose to continue the arrangement with the Church of Ireland Training College in Dublin, whereby candidates from all parts of Ireland have been trained there for the teaching profession, and the College has agreed to comply with the Ministry's requirements. It is also proposed to establish a new Training College later in Belfast itself. The amount of the vote for Educational Services in the North for the current year is £1,249,812.

School Mistresses' Association.

The annual meeting of the School Mistresses' Association which had been postponed from January, was held at Alexandra College, Dublin, at the end of May. The report which reviewed the work of Irish Education for the past year states that the present year would be an extremely critical one for the teaching profession; the Intermediate Board would disappear and a new system of education would be set up. After the adoption of the report Miss M. Hammond, Head of the Women's Training Department, Birmingham University, read a paper on "The Psychological Ground of Some Modern Educational Movements."

LOCAL EDUCATION AUTHORITIES.

Leicestershire Higher Education.

In a note to the Higher Education estimates of the Leicestershire Education Committee, Mr. W. A. Brockington says that by the adoption of one in twenty-five ratio and the subsequent reduction of staff, in some cases the increases under the Burnham Agreement have been neutralized. By limiting the estimates for Scholarships the Committee have had to abandon their policy adopted in 1919, of offering free secondary education to those pupils who were undoubtedly qualified to benefit by it and who would otherwise be prevented from doing so by their inability to pay fees. The number of candidates presented this year for the examination for Junior Scholarships was 2,170. "It must be realized," says Mr. Brockington, "that in restricting the number of Junior Scholarships to one hundred, as is necessary under the existing Scholarships estimate, the Committee are departing much farther than in previous years from their policy of providing secondary education for qualified pupils of public elementary schools. Such changes as the further limitation of the number of teachers to pupils in the County Grammar School are administrative changes which, it is hoped, will not result in any appreciable loss of efficiency. There is a general disposition among teachers to meet the harder conditions which are imposed. Such changes as the limitation of the number of County Scholarships fall, however, in a different category. The abandonment of the policy indicated in Section 4 (4) of the Education

Act of 1918 means a temporary halt in the progress of national education."

After long delay, the section of the Education Act, 1918, under which all exemptions from attendance at school under the age of 14 will disappear, will come into operation on July 1, 1922.

The change is one of great importance. While in many urban areas there have been few, if any, exceptions to the rule that children should remain at school till the age of 14, in nearly all administrative counties the by-laws regulating school attendance have provided for exemptions of which full advantage has been taken. In 1919, for instance, the difference between the number of children on the school registers between 12-13 and 13-14 respectively was 170,000. We welcome the reform and only regret that it cannot be associated with some definite measure for improving generally the educational facilities for older children attending elementary schools, particularly in country districts.

It is generally conceded that the Board of Education are well advised in terminating the arrangement under which they have, both directly and indirectly, subsidised certain institutions. As the Education Committee of the London

County Council remarks. "The system by which the Board have paid twice (first by substantive and again by deficiency grants) cannot, in our opinion, be defended." In the Metropolis there are 51 Secondary Schools, 5 Junior Technical Schools, 3 Technical Institutes, and 3 Training Colleges maintained by the Board's substantive grants supplemented by contributions from the Local Education Authority. The contributions of the Authority to the Secondary Schools amount to about £280,000 a year and the substantive grants of the Board to approximately £140,000. Under the proposed regulations, the contributions made by the Committee will cease to rank for deficiency grant at the rate of one-fifth of the total sum per annum. In the opinion of the Education Committee, and there is much to be said for their view, the Board of Education, instead of discouraging the contributions of the Local Education Authority, should reduce by instalments the substantive grants to the schools, leaving the Local Authority to make good the deficit if necessary. The Education Committee anticipates that if the Governors receive the Board's grant in full throughout five years, they would strongly resent being required to cease to receive it and pressure would be brought to bear on the Education Committee to continue to aid the schools as before, even if the Authority had to forgo the deficiency grant.

To the resolution of the London County Council urging the Board of Education to consider the advantages of the large open area available at Holland Park as the location of the new

University quarter as an alternative to the restricted and far more costly site selected at Bloomsbury, the Commissioners of the Treasury have replied that their Lordships are unable to reopen the matter. The County Council conditionally approved of the Bloomsbury site in October, 1920, and it was purchased by the Government in 1921. Captain Swinton raised the question of the Holland Park site in February, 1921, and although the Higher Education Sub-Committee recommended that no action should be taken, the Education Committee, and subsequently the Council, adopted another view. The Council admitted that when the Bloomsbury site was approved it was not known that a block of land was available on the Holland Park Estate easily accessible from all parts of London; costing much less money, very much larger and so affording room for expansion—matters of vital interest to the Council as the Educational and Town Planning Authority for London. While the total area of what is known as "Holland House and Park," is approximately sixty-eight acres, of which thirty-five acres are immediately available, the Bloomsbury site consists of eleven acres, but is a fragment of a fairly large estate extending for some fifty acres, all of which may come into the market in the course of the next fifty years. The paramount importance of securing, at this time, ample space for future development and the heavy cost that would be involved in extending the Bloomsbury site may possibly outweigh the disadvantages of the Holland Park site. At any rate, the question appears to merit some further consideration.

THE LONDON SCHOOL OF DALCROZE EURHYTHMICS.—A prize of six guineas is offered for the best set of words suitable for a school song. Particulars can be obtained from the Secretary, The Dalcroze School, 23 Store Street, W. C. 1.

FOREIGN AND DOMINION NOTES.

GERMANY.

What is the place of the parent in education? Is his only business to provide raw material for pedagogic processes? Has he absolute right to govern the shaping of his offspring? Or

The Right of the Parent.

where does he stand between these two extreme positions? In England the great public schools snub him; smaller and private schools humour him; whilst in certain modern institutions he is the divine oracle whose utterances the teacher must revere and obey. In France Catholics fight for him against the aggressions of the State. Germany is in difficulties with him. Before the War the State there was tightening its hold on the child—the State which stood for the Monarchy and for religion. Now that the State is neither monarchical nor religious, the old-fashioned parent, who is both, grasps at his child. On the other hand, the socialistic State is jealous of *Elternrecht*, or parents' right. What the socialistic teachers say is revealed by the report of their Second Congress, which was held lately at Hamburg. "The right of parents," said Herr Köster, "is limited by the right of the child, the right of the community, and the right of the teacher"; indeed it was finally laid down at the Congress that *Staatsrecht bricht Elternrecht*, the right of the State, is higher than the right of parents. Nor is it the State alone that claims authority over the German child; Churches, political parties, and cranks of all sorts would fain share control of him. It was hoped to connect home and school by means of *Elternbeiräte*, or Parents' Councils; they have, in fact, but brought politics into the schoolhouse. Now it is asked that *Elternrecht* should be clearly defined in the impending *Reichsschulgesetz*, or Imperial School Law. Perhaps in England, too, parents' right might well be discussed and more clearly determined. In technical matters the interference of the parent is often an injury to the child; thus the city merchant, who may be a good judge of corn or wool, is seldom competent to decide whether his son should learn Greek or not. And as education grows more scientific and studies it objects more minutely, the less becomes the value of uninformed opinion. As to the moral and physical welfare of the child, it should be sought by parents and teachers in close and sympathetic co-operation. Many head masters, were they free to speak, would say that schools suffer as much from want of frankness in parents as from original sin in children. Parents have duties as well as rights. For the rest, we would limit their powers in proportion to their incapability and not otherwise.

Das Werden Zeitalter (i., 2) contains an interesting article on "Die Hamburger Gemeinschaftsschulen,"

Gemeinschaftsschulen.

which have as their motto "Vom Kinde aus!" Banished from them are the old punishments and constraints. Instead of classes graded according to age, free groups form about the teachers, and you may even read of a boy who did nothing at all in school but wander from group to group in search of inspirations for work at home. Plato taught that learning to be worth anything must be voluntary and accompanied by pleasure; so that the Hamburg pedagogues have high authority for their basic principle. And experiments in education are to be encouraged. They must be judged, however, by the results obtained—by their efficacy in the making of a man as a social animal. There is a modern and illusive way of regarding method as in itself an end.

FRANCE.

On July 15 the *Fédération internationale des femmes universitaires* will hold its Congress at Paris. The

Women.

term *universitaire* has received an extended meaning; so that women painters, sculptors, and engineers, even if not strictly academically trained, will be represented at the meeting. We remark, *à propos* of women, that France is interesting herself in the new movement to prepare them for social service. Of institutions for this purpose Switzerland has four, and Germany, where the first was established at Berlin in 1908 by Alice Salomon, has no fewer than fifty. A new career for French women may be opened by their appointment as inspectors to combat infantile mortality and to promote the public health.

There was a time when every one read "Le roman d'un jeune homme pauvre." "Julia de Trécœur" was dramatized as "Le Sphinx"; whilst both

A dead Author.

"L'histoire de Sibylle" and "M. de Camors" had a wide circulation. Of the style of Octave Feuillet, the

author of these books, Loti has said: "Il ressemble à la toilette de ces femmes dont l'élégance, bien qu'excessive, est tellement discrète qu'on la remarque à peine." The world in general has, perhaps, forgotten Feuillet; yet on Sunday, March 5, the centenary of his birth was celebrated where it took place—at Saint-Lô (Manche). Commemoration of the dead has, as we hold, an educative influence not to be ignored.

UNITED STATES.

The *Educational Review* (lxiii., 5) begins with an article on

Appointment Bureaux.

"Appointment Bureaux in Colleges and Universities" by Dr. Arthur J. Jones, who, having been for seven years Director of the Appointment Bureau at the University of Pennsylvania, is informed by experience. Let us glance at his matter. The first aim of Appointment Bureaux was to provide for individuals and, through success in this form, to attract students to the organizing academy; a higher aim and a deeper feeling are now apparent—a feeling of responsibility to society for placing the right men in the right places, so that each may give to the community his best service. The old testimonial system was bad; the recommendation of a president or dean: "is a fine manly fellow," "of strong Christian character," "the son of Senator Blank," had little worth for guidance. Basic principles for the organization of Appointment Bureaux should be: (1) There should be a central office where complete records of all candidates shall be kept in such a way as to be ready for instant use; (2) The one who actually makes the recommendations should know as completely and intimately as possible, (a) the peculiar conditions of the position for which a candidate is sought; and (b) the candidate to be recommended; also (3) the utmost frankness and honesty should be used in recommending candidates, only the best interests of society and the individual being kept in mind. As to finances, in most American institutions the service is free both to candidates for employment and to the school or other employer. The cost of the bureau is comparatively small and shows that private agencies must be very remunerative. If commissions were charged on each placement at the usual rate of 5 per cent of the first year's salary, and if a registration fee of two dollars were required of all applicants, practically every college Bureau would have an enormous percentage of profit on outlay. But there is a hindrance in the way of efficient activity; a university or college Bureau registering only its own graduates has a limited number of candidates, whilst a private agency can draw from many institutions. Dr. Jones proposes, then, co-ordination among the Bureaus of various institutions so that there might be the widest interchange of candidates available and of vacancies. For one of his recommendations we have unmixed approval—the substitution of *record* for *testimonial*. In testimonials friendship is wont to strike too kind a note, whilst a quarrel or a personal antipathy may work disparagingly. The longer a record were continued, the more probable would become the elimination of the personal factor.

The teacher should be one who has chosen teaching as the work of his life; to be so chosen an adequate and progressive salary must be attached to the work. *The School Review* (xxx., 6)

About Salaries.

examines "The Salary Outlook for High School Teachers." The average salary of a secondary school teacher in the United States is, at the outset, 1,297 dollars a year, or a little more than 100 dollars a month; the average salary for all teachers is 1,678 dollars or only 381 dollars more than the average salary for beginners. It is not strange, then, that the average duration of a secondary teacher's career should be only about six years. Some years ago—we elect to say nothing of the present time—there were English schools officered by migratory sporting ushers, eager to escape from an unpromising vocation.

INDIA.

In France a large section of the women has set *Identification* on its banner; in India the social disparity

Women and the University.

between men and women is so great that a system of education fit for one sex can hardly be fit for the other. Hence there has been formed a Working Committee, with Sir Ashutosh Chowdhury as Chairman, in order to organize a Women's University in Calcutta. The appeal issued by the Committee has a certain note of pathos. "We Indian women have lost the lofty spiritual culture which was the chief glory of our ancient system of education; and in its place we have acquired a love of sexual enjoyment and of luxury, with other faults of Western Civilization." It is their

hope to rise not "by boycotting Western civilization," but by fusing "the deep spirituality of the East with the science and art of the West." Thus it is plain that some Indian women have more wisdom than some Indian men. The British Federation of University Women is offering this June to members of the International Federation, without distinction of race, a fellowship of £300 for research or post-graduate study, and the women of Indian universities are for the first time enabled to compete. The success of an Indian woman would delight the whole Empire.

THE SUDAN.

The Gordon Memorial College "continues to do much valuable work in the development of a country whose inhabitants are imbued with feelings of loyalty and affection towards those who, they are convinced, are doing their utmost to enable them to take a useful share in the progress and administration of their homeland." Sustained progress is the dominant note of the latest Report (to December 31, 1920) from which we quote. Attention is being paid to the difficult problems of teaching in Arabic, and in the Upper School the first Sudan-trained teacher has been appointed to fill a vacancy as Arabic teacher, whilst a Sudanese has replaced an Egyptian as a teacher of Religious Law. The Engineering Section of the College supplies trained pupils for the great works in the Gezira, and the demand for them is steady. To help the inhabitants war is waged, by the scientists of the College, on the diseases to which the cotton plant is subject, and on the hyænas that ravage flocks and herds. Of archæological work the most notable feature reported is Dr. Reisner's excavation of the site of the Jebel Barkal Temple.

TOPICS AND EVENTS.

EDUCATION GUILD CONFERENCE ON THE DALTON PLAN.—The Programme of the Conference on the Dalton Plan, to be held at the University, Bristol, from July 29 to August 8 is both interesting and comprehensive. The lecturers are all practical teachers who are using the Dalton Plan as the basis of their school work. The Plan will not only be dealt with from the point of view of the secondary school, but also from that of the elementary school, as Mrs. Muir Stanbury, of the John Evelyn School, Deptford, will lecture on its working in the elementary school with subject rooms and specialist teachers, and Miss Rose, of the Westminster Jews' Free School, will describe her use of the plan dealing with one class only and setting her own assignments in every subject. Mr. Ernest Jackman, Principal of the High School at Dalton, Massachusetts, after which Miss Parkhurst has named her plan of school re-organization, will attend the Conference. Full particulars of the Conference may be obtained from the General Secretary, The Education Guild, 9 Brunswick Square, W.C. 1.

ADMISSION OF WOMEN TO MEMBERSHIP OF CAMBRIDGE UNIVERSITY.—As arranged by the National Union of Societies for Equal Citizenship, the Minister of Education, on June 15, received a deputation of Members of Parliament, and of past and present members of the staff and students of Newnham and Girton Colleges. The deputation expressed the strong feeling in favour of the recommendation of the Report of the Royal Commission on Oxford and Cambridge Universities "that women be entitled to be admitted on the same conditions as men to membership of the University."

PENSIONS.—The Board of Education state that it would be a great convenience to them if teachers who expect to retire and make application for pensions during the year beginning April 1, 1923, would notify the Board informally and provisionally of their intention before October 1, 1922. This information will both assist the Board in estimating for the year 1923-24 and enable them to expedite a decision on the formal application when it is received. The notification should be marked "provisional," will not be treated as an application, and will be used for no purpose except to facilitate the Board's own administration.

ASSOCIATION OF TEACHERS IN TECHNICAL INSTITUTIONS. ANNUAL CONFERENCE.—In his presidential address, Mr. J. Paley Yorke said there never was a time in the history of this country at any rate when the individual was so keenly alive to the necessity of the education of his child as he was to-day.

Therefore there was no need for despair. It was forty years since any national inquiry was made on technical education. Since that time the advance in scientific knowledge, and the development of the application of science to industry had been enormous, and the time was now ripe for the appointment of a Committee of Inquiry to be set up to investigate the whole field of technical education. There was a great deal of misconception as to what technical education really was. In the minds of a number of people it was only for artisans and those who partook of it were only fitted to be artisans. Others looked upon it as a glorified kindergarten, where by playing a lot the pupils were beguiled into learning a little. Viscount Burnham, in his address to the Conference, said that much of the money spent on education would be wasted if the teaching profession had a sense of grievance and ill-treatment, which those who looked back upon educational history knew to be, on the whole, justified and well founded. It was necessary that there should be a permanent and reliable scale of salaries for teachers. Technical education was slowly gaining its rightful place in the history of educational development. It was but thirty years old, if they looked to realities of sufficient importance to be worth considering. In this country it did not proceed from high motives of State policy—as in the German empire—or from the magic wands of multi-millionaires as in America. The necessity of technical education was admitted, but the masters mistrusted those who came out of the schools because although they had theoretical knowledge they lacked the practical sense. We needed to get our technical schools into close touch and relation with our industrial works. In the development of industries in new areas both within and without our Empire trained leaders were necessary and it was stupidity of the worst kind not to make foreign languages an essential part of the training of our technical schools.

CONFERENCE ON THE TEACHING OF SCRIPTURE IN SCHOOLS.—Arranged by the Association of University Women Teachers this Conference was held at University College, W.C. 1, on June 17. Miss Winifred Smith, who presided, extended a welcome to the expert scholars and teachers who were to address the Conference. Dr. Douglas Adam said that the study of Scripture should be a life-long exercise. The Bible was made for man and not man for the Bible, and the study should aim at answering fundamental human problems. There is a place for the study of the Bible as Literature, History, Ethics, and Biography, but it must also answer an actual human need. Miss Mercier, Principal of Whitelands Training College, said the human side of Christ should be presented to children first. It is impossible to teach Scripture without teaching religion. The accumulation of knowledge must be second to the presentation of the point of view. Miss Robertson, late Head Mistress of Christ's Hospital (Girls), emphasized the opinion that no one should be obliged to teach Scripture if they cannot conscientiously do so. Bishop Gore, speaking as a scholar who had devoted the greater part of his life to the study of the Scriptures, advised students to begin their study of the Bible with the Old Testament Prophets, but without troubling about obscurities. The essential things are clear. They should begin their studies with open minds and not with rationalistic pre-suppositions. The Prophet's work is referred to in Hebrews i., "God who at sundry times and in divers manners spake in times past unto the Fathers by the Prophets." We see the gradual transformation of a barbarous and superstitious people by the moral law. Genesis is the work of a man of genius dealing with the crude legends of the early Semitic peoples. Through these he teaches man about God. In the last century the books of the New Testament were believed to have been written very late. They were supposed to be a late revision of the original writings and from a different point of view, but that idea has been changed, and it is now thought that in the main the Gospels and the Acts represent the actual work of the Apostles. Miss Richards, Principal of Stockwell Training College, stressed the importance of teachers' preparation. A higher standard of qualification is required. The intellectual and emotional sides need to be equally developed in religious experience.

HOLIDAY ADDRESSES.—Messrs. Evans Brothers, Montague House, Russell Square, W.C. 1, have issued a book of recommended holiday addresses containing about a thousand addresses from various parts of England, Wales, the Channel Isles, and the Continent. The places are conveniently arranged in alphabetical order and it is indicated in each case whether the address refers to apartments or a boarding house.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C. 2.

SUMMER SCHOOL AT GLAMORGAN.—The Education Committee of Glamorgan County Council has issued an illustrated pamphlet dealing with this well-known holiday school, which is celebrating its seventeenth anniversary this year. The school opens on July 31 and continues until August 26, and there will be courses on applied handwork, art, art needlework, domestic handicraft, dressmaking, gardening, and biological science, practical geography, music, pedagogy, Montessori method, Welsh, wood and metal work, hygiene, and physical training. Some of the courses and the examinations which ensue are accepted by the Board of Education for the purpose of the acting teacher's certificate. Accommodation can be obtained in Barry, and camps are being organized for men in the playing fields of the Boys' County School, and for women in the Training College grounds. Full particulars can be obtained from the Chief Education Official, Glamorgan County Hall, Cathays Park, Cardiff.

THE EDUCATIONAL GUILD OF GREAT BRITAIN AND IRELAND.—Launched some thirty-eight years ago as the Teachers' Guild, this body has witnessed remarkable progress in the cause of education and now, in the annual report for 1921, a record is given of the changes in the Guild itself, which it has been necessary to make. The war brought a curtailment of membership, and in consequence of finances, from which the Guild seemed unable to recover, and with the object of stimulating its activities, it was decided to change the name to the Educational Guild of Great Britain and Ireland. This title, it was felt, would make clear to the public that membership of the Guild is not limited to teachers but is open to all interested in the study and practice of education. Another change which has been made is to fix an annual subscription to cover membership both of the Guild and the Guild's Club. In this way, all members of the Guild are able to make use of the premises of the Guild as a club-house and social centre, and valuable results are expected from the increased association of those directly and indirectly concerned with education which this change is expected to promote. The Guild has now reached a critical time in its history and the report concludes with an appeal for the loyal co-operation of all interested in education to enable it to carry on the valuable work which it has been doing during the past thirty-eight years.

THE IDEAL OF SERVICE.—A service for senior scholars of London secondary schools, at which the Bishop of Southampton, Dr. Boutflower, will deliver an address on this subject, will be held in St. Paul's Cathedral on July 7, at 6 o'clock. The object of the gathering is to put before those who are about to go out into the world, the ideal of service in their respective vocations, and Canon Maplesden, Church House, Westminster, asks the earnest co-operation of head masters and head mistresses by encouraging their pupils to attend the service.

THE P.N.E.U. CONFERENCE, AMBLESIDE, MAY 29 TO JUNE 1.—A Conference of Parents and Teachers was held at the House of Education, Ambleside, in connexion with the Parents' National Educational Union. This Union was formed by Miss Mason so that parents and teachers might unite in seeking the children's highest interests and provide an education better and wider than is generally found in English schools. Thanks to Miss Mason's wide experience, practical wisdom, and appreciation of English Literature, P.N.E.U. schools throughout England have each term a programme of work delightfully interesting and at the same time solid and instructive. She has realized and used the fact that children naturally appreciate good literature and that this and not mere text-books should be the basis of education. A new spirit has been diffused in the schoolroom, putting joy as well as power into the work. At the Conference she explained some of the ideals of the P.N.E.U. and how much it is a national service. One felt the spirit of aspiration behind it all and the great results that even already are seen. The criticism lessons given by the students to the children showed many of the characteristic features of the method. The children read quite difficult passages from literature, history, or scientific treatises, then narrated them with appreciation and understanding. The great value of the concentration thus involved is obvious to any one interested in education. The "all-round" thoroughness of the method was brought out by Miss Parish in her address on "The Science of Relations," showing how all subjects play their due part in "a liberal education." The nature walks, bird walks, and a geography walk arranged for the visitors gave them some idea of how P.N.E.U. students

(Continued on page 452.)

MATHEMATICS

The Carson-Smith Mathematical Series.

By **G. ST. L. CARSON, M.A., M.Sc.**, Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and **DAVID EUGENE SMITH, Ph.D.**, Professor of Mathematics in Teachers' College, Columbia University.

An Alternative Edition.

In response to numerous requests the publishers have just issued editions of Part I of the well-known **Elements of Algebra** and **Plane Geometry** in two sections. Section I of **Elements of Algebra** includes the introductory work, Positive and Negative Numbers, Graphs, the Four Rules, and Simple Equations. Section II includes Simultaneous Equations, Special Products, Factors, Fractions, and an elementary treatment of Logarithms.

Section I of **Plane Geometry**, entitled '**First Ideas of Geometry**,' consists of the Introductory work only. Section II contains the substance of Euclid, Books I and II.

ELEMENTS OF ALGEBRA.

Part I	..	340 pages	..	3s. 6d. net.
Section I	2s. net.
Section II	2s. 3d. net.
Part II	..	214 pages	..	3s. net.
Parts I and II	..	538 pages	..	5s. 6d. net.
Part III	<i>In Preparation.</i>

A Prospectus of the Series will be forwarded on application.

TWO BOOKS FOR THE TEACHER.

THE TEACHING OF ARITHMETIC.

By **D. E. SMITH**, Professor of Mathematics in Teachers' College, Columbia University. 196 pages. 6s. net.

THE TEACHING OF GEOMETRY.

By **D. E. SMITH**, Professor of Mathematics in Teachers' College, Columbia University. 339 pages. 7s. net.

TWO INFORMAL NUMBER BOOKS.

WORK AND PLAY WITH NUMBERS.

By **G. WENTWORTH** and **D. E. SMITH**. 144 pages, illustrated. 2s. 9d. net.

A number primer in which nursery rhymes coupled with attractive illustrations are the basis of the teaching. The book is designed to take advantage of the child's natural interest in number; the method is therefore informal, the simpler number relations of addition, subtraction, and multiplication being set forth in a manner which will appeal to the child. The print is large and easy to read; the numbers appear in script as well as in print.

Complete Catalogue sent on application.

NUMBER STORIES OF LONG AGO.

By **D. E. SMITH**. 150 pages, with many illustrations. 2s. 9d. net.

An account of the development of number delightfully written in the form of stories told to children. Among other things, the book tells of man's attempts to count, of the various concrete devices adopted by mankind in the different ages for making calculations, and of the ways in which the children of long ago worked their sums. The last two chapters contain some of the oldest number puzzles, solutions to which are published in an appendix.

Books forwarded on approval to teachers.

GINN AND COMPANY,

7 QUEEN SQUARE, SOUTHAMPTON ROW, LONDON, W.C.1.

and children are brought into close personal contact with nature, more so than in any other system of education. Another of the features of this method is the "Drawing Room Evening" on some great writer, famous place, or interesting topic. The subject chosen for the Conference was "Borrow." The "Musical Appreciation" evening—always an event at Scale How—was especially interesting, as Mrs. Howard Glover showed how children can be introduced to the great composers. "Greig," the composer selected for the term's work in the schools, was taken up and selections from his work were sung and played. It would be difficult to tell of all the interesting items in the Conference programme—the students' presentation of "The Rivals," the children's scenes from "A Midsummer Night's Dream" and "A Dream of Fair Women"—which were delightfully staged among trees and rhododendrons; the exhibitions of handicrafts, nature notebooks, examination papers, the "Wordsworth Pilgrimage" round the poet's haunts, and many other things.

INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN.—The second Conference of the Federation is to be held at the American University Women's Club, No. 4, Rue de Chevreuse, Paris, from July 15 to 18. An attractive programme has been arranged, details of which, and other information, can be obtained from the Secretary, 92 Victoria Street, S.W. 1.

INTERNATIONAL LABOUR ORGANIZATION UNDER THE TREATY OF VERSAILLES.—About two hundred teachers, men and women, from the primary schools of the Canton of Geneva, paid a visit to the International Labour Office recently with a view to gaining first-hand knowledge of its aims and work. In a short address of welcome, the Director of the Office spoke of the high ideals which inspired the creation of the International Labour Organization. There were two significant respects in which it was important that the International Labour Organization and the teachers of the world should collaborate. The main aim of the International Labour Organization was to raise the conditions of labour of the workers. Without such an organization the work of the teachers would be of no avail. Their efforts would be fruitless if, after leaving school, the boy and girl were so overwhelmed by the fatigue of toil that they lost the love of knowledge which had been instilled into them. On the other

hand, the work of the Organization required for its full success the co-operation of the teachers. What, in the end, would be the advantage of improving conditions of life and labour, if the workman had not received an education to inspire him with a desire to realize, in his hours of leisure, the full heights of human dignity?

LONDON SCHOOLS HOSPITAL FUND.—An urgent appeal for help on behalf of the London Hospitals has been made by the Chairman of the London County Council and the various associations of members of the teaching profession. Every endeavour is being made to remove the burden of accumulated debts which now threatens to crush the hospitals, and it is confidently expected that response to the appeal will suffice for this purpose and so render unnecessary any further special appeal.

THE LONDON SUNDAY SCHOOL CHOIR.—A great Musical Festival of the Choir will be held at the Crystal Palace, Sydenham, on Saturday, July 8.

MENTAL DEFICIENCY.—A two-day Conference will be held at Caxton Hall, Westminster, on Wednesday and Thursday, July 26 and 27, 1922, under the auspices of the Central Association for Mental Welfare. The first day will be devoted to discussion of "Mental Deficiency in relation to Crime," and the Rt. Hon. Lord Justice Atkin will give a concluding address; the second day will be devoted to Educational matters; the Rt. Hon. H. A. L. Fisher will attend and address the Conference. Further details may be obtained from the Hon. Secretary, C.A.M.W., 24 Buckingham Palace Road, S.W. 1.

HOLIDAY COURSES IN GENEVA.—The University of Geneva, the pioneer of the institution of vacation classes for foreigners, which were started there exactly thirty years ago, will give considerable extension to this year's courses, by adding to the usual classes of theoretical and practical instruction in French, a series of interesting lectures (English and French) on various subjects of international interest such as: Governments in Continental Europe, the New Map of Europe, International Conferences and Treaties of the Nineteenth and Twentieth Centuries,

Questions of the East, International Law Courts, the Labour Movement, &c. Among the names of the lecturers, we find Profs. Aulard and Hauser, of Paris University, Dr. Nitobe, the Japanese Under Secretary General of the League of Nations, M. Albert Thomas, Director of the International Labour Office, Prof. Dr. Foster, of Dartmouth College, U.S.A. The courses begin on July 17 and last until September 10. They are divided into two sections. Inquiries should be addressed to Prof. Thudichum, Université de Genève.

MESSRS. W. & G. FOYLE, LTD., of 121-125 Charing Cross Road, London, have purchased the entire stock and connexion of Mr. J. H. Robins, Educational Bookseller, Chester, consisting of 25,000 volumes on Educational and Scientific subjects and Agriculture. The whole of the stock is being offered by Messrs. Foyle at very reduced prices, particulars of which are given in an advertisement on another page.

THE DECIMAL ASSOCIATION.—Teachers of arithmetic, and others interested in national and rational reforms, will frequently find suggestions and aids in the *Decimal Educator*, the quarterly journal of the Decimal Association, which exists to promote the adoption of a decimal system of coinage and of the metric system of weights and measures in the United Kingdom. The June issue contains several references to the proposal to divide the shilling into ten pence instead of twelve, thus increasing the token value of existing copper coins by twenty per cent while maintaining the present values of the pound and shilling. There is also an article by Mr. A. E. Vago showing how the metric system may provide simple checks upon commercial calculations already simplified by the use of decimals, and one on the metric campaign in the United States. The offices of the Association are at 229-231 Finsbury Pavement House, London, E.C. 2, and the secretary will be glad to send particulars of membership and publications upon application.

HOLIDAY COURSES IN ITALY AND SPAIN.—A holiday course in Florence for those desirous of improving their knowledge of Italian and Italian literature is being organized under the auspices of the University of Florence. There will be instruction in phonetics and in the morphology and syntax of Italian, and

lectures on modern Italian literature, on Dante, Italian history, and the history of art, as well as practical work in the language. A number of local tours have been arranged, and it will also be possible to pay extensive visits to the Italian lakes. Similar courses are also being organized by the Universities of Siena, Perugia, and Naples. Full details of the courses and tours can be obtained from the offices of the Italian State Railways, 12 Waterloo Place, London, S.W. 1. A holiday course in Madrid of four or six weeks, commencing on July 8, is announced by the Centro de Estudios Históricos. Lectures on the literature, history, art, and geography of Spain, and special courses for advanced students, will be given; a number of small classes especially for the study of commercial Spanish will also be formed. The courses will include visits to places of interest in Madrid, and more extensive excursions to Toledo, Segovia, La Granja, Escorial, Alcatá, and Guadalajara. Information will be supplied by the Spanish Travel Bureau, 11 Queen Victoria Street, London, E.C. 4.

HOLIDAY COURSE IN THE AUSTRIAN TIROL.—The Civic Education League is organizing a course on regional survey lines lasting a month in the Austrian Tirol. The probable date of starting is August 4, and it is possible to arrange for a fortnight's course in place of the full four weeks' tour. The party will be divided into sections, each of which will confine itself to one particular aspect of the survey; the anthropology, geology, and physiography, ecology, history, and sociology of the region will thus be covered by the several sections. Further particulars can be obtained from Leplay House, 65 Belgrave Road, S.W. 1.

VACATION COURSES IN GERMAN.—The fourth annual holiday school for the study of German will begin on July 24 at Basle. The course, which will be held in the University of Basle, will last four weeks, and there will be, in addition to instruction in German, lectures on the works of Goethe and Schiller, German novels, drama, and art, on the democracy and folk-lore of Switzerland, and on the educational system in Basle. There will also be opportunities for visits to places of interest in the locality. Applications should be made to the Secretary of the University of Basle.

(Continued on page 456.)

LITERATURE TEACHING IN SCHOOLS.

4s. 6d. net. By JOHN EADES.

This book contains a complete course of Stories, Books to be read, and Poems, for each of eight years; and Biographies of all authors whose work is included in the scheme. It also contains hints on how to deal with a short story, a poem, a novel, an essay, and a play.

THE "A.L." NEW ENGLISH COURSE. By JOHN EADES.

Just the books to keep pupils and teacher on the right lines. Book I. published 3d.; Book II, 4d.; Book III, 5d.; Book IV, 6d.; Book V, 7d.; Book VI, 8d.

Teachers' Handbooks to each of the above Grades.

Book VII, for senior pupils and the lower forms of Secondary Schools. Paper, published 1s. 4d.; limp cloth, published 2s.

MODERN IDEAS AND METHODS. 3s. 6d. net. By JOHN EADES.

A book no teacher can afford to be without.

"A.L." JUNIOR SCHOLARSHIP TESTS. Pub. 8d.

A set of tests in Arithmetic (with Answers), History, Geography, English, and General Information. Just the book to prepare pupils for Junior City and County Minor Scholarship Examinations, and for admission to Secondary Schools.

New Members receive in return for the Entrance fee: *The Principles of the I.P.A., What is Phonetics?* by H. E. Palmer, and *Le Phonétique appliqué à l'Enseignement de la Lecture*, by P. Passy.—List of other publications and prices and back numbers of *Le Maître Phonétique* (from 1889) on application.

HALF AND HALF TRAGEDY. SCENES IN BLACK AND WHITE. Price 6s.

By ASCOTT R. HOPE,

Author of "Cap and Gown Comedy," &c.

"Mr. Hope apologizes for his title, or rather explains it and the difficulty he had in choosing it, to make clear that these are the tragedies of 'half-sized actors,' those tragedies that to the youthful mind are so overwhelming, but when looked back upon in more mature years seem almost trivial. Still, one or two of them are tragic enough to be considered so at any age, the first one at least, 'Sent to Coventry' . . . There is something more than half a tragedy, too, in the longest of the chronicles, 'An Old Friend.'"—*Daily Chronicle*.

A. & C. BLACK, LONDON.

THE ANNUAL "Directory of Educational Associations"

which has been described as ONE OF THE MOST USEFUL RETURNS PUBLISHED BY ANY BRITISH EDUCATIONAL JOURNAL appeared in the March, 1922, issue of "THE JOURNAL OF EDUCATION AND SCHOOL WORLD"—a paper "indispensable to all school and college reading-rooms in these islands."—*The Westminster Gazette*.

This "DIRECTORY" has been corrected to date by responsible officials. It gives (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

London: Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

Admirably adapted for Teaching and Lecture Purposes.

Stanford's "Large" Series of School Maps.

Messrs. Edward Stanford, Ltd., have pleasure in announcing that they have now reduced the price of their well-known series of "Large" School Maps to:—

Mounted on Rollers and Varnished. **17/6** each. Size of each Map, 50 × 58 inches.

At this price they are the cheapest as well the best School Maps on the market.
All Maps show the new International Boundaries.

EUROPE.

Scale 65 miles to an inch.

Boundaries of the various new States are clearly shown and are correct with the information available.

ASIA.

Scale 140 miles to an inch.

The connexion of the physical features of Asia, with those of the continents of Europe, Africa, and Australia, is clearly seen, and the colonies of the various European Powers are distinguished.

AFRICA.

Scale 115 miles to an inch.

Shows by colour the possessions of the various European and Native Powers, separating the red and black races. The courses of the great rivers are carefully traced, the positions of the great lakes and deserts are shown.

NORTH AMERICA.

Scale 95 miles to an inch.

The boundaries of the various American States and the Canadian Provinces are shown, as well as the recently formed divisions in the North-West Territories.

WORLD.

On Mercator's Projection.

The various political divisions, including the new States, are clearly defined by colour. The late German Colonies are shown allotted to their new owners or mandatories.

Bold, Clear, Accurate, and Attractively Coloured.

Other Maps in this series comprise:

BRITISH ISLES (11½)
SCOTLAND (5½)
INDIA (40)
AUSTRALASIA (86)

ENGLAND AND WALES (7½)
IRELAND (5½)
UNITED STATES (60)
VICTORIA (9)
NEW ZEALAND (17)

LONDON (3" to 1 mile)
HOLY LAND (4½)
SOUTH AMERICA (95)
NEW SOUTH WALES (14)

The figures in brackets denote the scale in miles to an inch

As a Special Offer to readers of "The Journal of Education," a selection of any twelve maps from the above list will be supplied for £9 18s.

EDWARD STANFORD, Ltd., Cartographers to the King, 12, 13, & 14 Long Acre, London, W.C.2

BRITISH ESPERANTO CONGRESS.—The thirteenth British Esperanto Congress will be held in London on June 2—6 under the auspices of the British Esperanto Association. The central feature of the gathering will be a public meeting, to be addressed by Dr. Edmond Privat, of Geneva, in the Queen's Hall, Langham Place, W. 1, while other meetings will be held at various dates during the week at the London Day Training College, and in Hyde Park. A number of excursions to places of interest in and around London have also been arranged. Tickets for the Congress can be obtained from the Hon. Secretary, Mrs. E. R. Edmonds, 19 Dellcott Road, Welwyn Garden City.

PRIZE COMPETITIONS.

The prize for the June Competition is awarded to "Traditore," and the second place to "S. B."

The winner of the May Competition is Mr. H. Cradock-Watson, Merchant Taylors' School, Crosby, Liverpool.

ACTION OFF THE ANTILLES—APRIL 12TH. BY "TRADITORE."

It was on April 12, 1782, that the two fleets met—wind light and baffling, chopping from E. to S.S.E. The French fleet was running on the larboard tack, but in loose formation and showing gaps in their line. The English fleet came up with them from the leeward on the opposite tack and his vanguard ranged alongside of the French ships, keeping well away. But just as the *Formidable*, with Rodney aboard, came up with the French fleet to run alongside them as the English vanguard had done, the wind freshened a little and drew aft a couple of points; "Haul your wind!" cries Captain Douglas, Rodney's flag-captain, to the sailing-master in charge of the helm. At first Rodney is for countermanding the order; but realizing presently that it will allow him to break the French line and throw him into confusion, perhaps even get him between two fires, he exclaims (our authority is the historian Ekins): "Then do it as you please!" *Then do it as you please—*

and yet in this trick of wind and those three words of Captain Douglas, words at first incomprehensible to Rodney, was implicit a whole new system of sea-fighting; soon the English ships, the *Formidable*, the *Agamemnon*, *The Duke*, etc., do actually break through the French line and spread, some to the offing, others along the French ships, which they bring between two fires. The Rear-Admiral in command of the English rearguard, copying Rodney's manœuvre, comes up, still on the reverse tack, and again breaks through our line behind the last ship of our vanguard. In vain de Grasse keeps repeating his signals to close for action; his line is crippled and cut up into three fragments. It is too late, the smoke prevents the signals being seen—a plausible excuse it might seem, but a fact nevertheless, and one sufficient of itself to fix as a standing rule "that the Admiral in Chief ought, as far as possible, to foresee before the engagement the tactics to be adopted, and fire once opened, the Captains should be so imbued with the plans of attack and their Admiral's intentions that signals are no longer needful to direct their movements."

We thought a description of a sea-fight would have the charm of novelty for our translators, and the small field was rather disappointing. No doubt the technical language deterred some people, though the terms do not really present any difficulty even to the land-lubber, and the narrative has that simplicity and lucidity of which French historical writers, more perhaps than any others, possess the secret. The one puzzling word in the passage is "*cependant*." Apparently it emphasizes the difference between the slowness of the effort and the importance of the results, but it is certainly awkward, and probably would not have been here used by a first-rate writer. "Master" is probably a Frenchman's mistake for "quarter-master." The prize-winner's version is crisp and lively, and shows a perfect comprehension of what happened, but his use of pronouns is peculiar, and why does he overload such a simple phrase as "Do as you please" with an unnecessary "it"? We need hardly add that whether the manœuvre known as "breaking the line" actually originated in this half-accidental way is a matter of controversy.

(Continued on page 458.)

FOREIGN LANGUAGES.

Language students can derive great practical help by reading "*Twinline*" Tales. These booklets contain modern short stories by famous foreign authors with an absolutely literal and interlinear translation. They are free from pedantry. They teach you to read the language. They help you to form a useful vocabulary. They show the actual construction and exact word sequence of each foreign sentence. They contain texts of fascinating interest. No matter how much or how little you know, these booklets will help you. The "*Twinline*" Series now includes:

FRENCH.	GERMAN.	SPANISH.	ITALIAN.
DUTCH.	DANISH.	SWEDISH.	RUSSIAN.

They cost only 8d. each or, post free, 9d. each. They are published by

THE HOLERTH PRESS,
46 Fleet Street, London, E.C. 4.

Our Catalogue for 1922 sent on receipt of a post card.

YOUNG SINGERS.

Their Voice Cultivation and Preservation.

A concise, comprehensive, up-to-date guide to all engaged in teaching Voice Production, Enunciation, and Singing to Girls and Boys.

By JAMES BATES,

Fourteen years Lecturer on Voice Culture, Phonetics, and Class Singing at the Royal Academy of Music.

"Your success as a trainer of young voices I have long admired."—SIR FREDERICK BRIDGE, Mus. Col., C.V.O.

"Your Book 'Young Singers' is most excellent."—E. T. COOK, Esq., Mus.Bac., F.R.C.A., Organist and Choirmaster, Southwark Cathedral.

"I cannot imagine a more successful book for those engaged in teaching Class Singing."—STANLEY R. MARCHANT, Esq., Mus.Doc., Sub-Organist of St. Paul's Cathedral.

"The book will, I am sure, prove most valuable to the very many who are engaged in the training of the voices of young singers."—E. S. ROPER, Esq., B.A., Mus.Bac., Organist, Composer, and Choir Trainer to H.M.'s Chapels Royal.

"Your new little book is most excellent. It is packed full of sound information and unimpeachable principles."—R. R. TERRY, Esq., Mus.Doc., Organist and Choirmaster, Westminster Cathedral.

To be obtained, 1s. 6d. post free, from 6 Blomfield Crescent, Paddington, London, W. 2. The Author.

Increase in price of back numbers of "The Journal of Education and School World."

For a list of Numbers, Volumes, and Binding Cases, still in print, apply to the Publisher:

Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

We classify the 58 versions as follows:—

Class I.—(a) Traditore, S. B., Bobs, Boy, Penguin, Chauve-souris.

(b) Torelore, Leander, Devonian, Padraic, M. L. M.

Class II.—Bésigue, C. A. B., Greenfinch, Benet, Kappa, Western Zephyr, Etudiante, Jacko, Revilo, Taugenichts, St. Barbe, Dinkie, Suze-la-rousse, M. V., Mike.

Class III.—W. G., Bell the Cat, E. W. J., Nanny, M. G. L., Myra Han, C. A. W., Flops, G. M. S., Hampden, S. H. G., Lenore, I. M. H., Topsy, P. H. M., Marjorie, Wintonia, Loyalty.

Class IV.—S. J., Edwy Nidd, Ahicam, Ambitieuse, I. M., Indoctus.

A Prize of Two Guineas is offered for the best translation of the following extract from the play, "Le Gendre de M. Poirier," by Augier and Sandeau.

LE DUC: Oui, regarde-la, cette casaque. C'est le seul habit où l'ennui ne soit pas entré avec moi. Et ce petit ornement que tu feins de ne pas voir. (*Il montre des galons*).

GASTON: Un galon de laine.

LE DUC: Que j'ai ramassé dans la plaine d'Isly, mon bon.

GASTON: Et quand auras-tu l'étoile de braves?

LE DUC: Ah! mon cher, ne plaisantons plus là-dessus; c'était bon autrefois; aujourd'hui, la croix est ma seule ambition, et, pour l'avoir, je donnerais galement une pinte de mon sang.

GASTON: Ah ça! tu es donc un troupier fini?

LE DUC: Eh! ma foi, oui! J'aime mon métier. C'est le seul qui convienne à un gentilhomme ruiné, et je n'ai qu'un regret, c'est de ne pas l'avoir pris plus tôt. C'est amusant, vois-tu, cette existence active et aventureuse; il n'y a pas jusqu'à la discipline qui n'ait son charme; c'est sain, cela repose l'esprit d'avoir sa vie réglée d'avance, sans discussion possible et par conséquent sans irrésolution et sans regret. C'est de là que viennent l'insouciance et la gaieté. On sait ce qu'on doit faire, on le fait, et on est content.

GASTON: A peu de frais.

LE DUC: Et puis, mon cher, ces idées patriotiques, dont nous nous moquions au café de Paris et que nous trahissions de chauvinisme, nous gonflent diablement le cœur en face de

l'ennemi. Le premier coup de canon défonce les blagues et le drapeau n'est plus un chiffon au bout d'une perche, c'est la robe même de la patrie.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on July 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

FREE PUBLIC LECTURES.

[Under this heading a list of free public lectures of especial interest to teachers will be published month by month. The figures in parenthesis indicates the number of a lecture if it is one of a series. [December, 1922]

CANON BOX,
Professor of Hebrew at the
University of London.

OTHER ARTICLES ARE IN PREPARATION.

Professor JOHN ADAMS wrote the Introductory Article to the famous **IDOLA PULPITORUM SERIES** (Nov. 1906—July 1903) and to the equally noteworthy **IDOLA LINGUARUM SERIES** (Feb. 1914—Jan. 1915), complete sets of which are now unobtainable.

London: Mr. WILLIAM RICE, Three Ludgate Broadway, E.C.4.

LADIES with University or other teaching qualifications, and teachers of special subjects seeking appointments in Public or Private Schools, at home or abroad, for the Autumn Term, should at once register with

Truman & Knightley

SCHOLASTIC AGENTS LTD

who will be pleased to give their requirements careful and personal attention.

THERE IS NO CHARGE FOR REGISTRATION OR MEMBERSHIP.

The terms to those securing engagements through this agency are:—

On accepting the engagement	10s.
At the end of the first term of such engagement	2½%
On the first year's salary, with an additional fee of £1 if the post be resident.	

Special terms for temporary engagements.

These fees are reckoned on the lowest possible basis consistent with efficient service, and compare very favourably with those charged by any other agency.

The following are selected from a number of **Autumn Term Vacancies**, for which Messrs. TRUMAN & KNIGHTLEY have been instructed to put forward candidates:—

A SELECTION OF CLASS BOOKS FOR SECONDARY SCHOOLS.

Botany, Chemistry, Physics, &c.

- Botany, Junior.** By FRANCIS CAVERS, D.Sc. 4s.
"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.
- Botany, Senior.** By FRANCIS CAVERS, D.Sc. 6s. 6d.
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purposes underlie the manifold variations which plants assume."—*Nature*.
- Chemistry Junior.** By R. H. ADIE, M.A., B.Sc. Second Edition. 4s.
"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine*.
- Chemistry, Senior.** By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 6s. 6d.
"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian*.
- Chemistry, Senior Practical.** By H. W. BAUSOR, M.A. 4s.
Including preparations, experiments on action of heat, quantitative and qualitative analysis.
- Chemical Calculations.** By H. W. BAUSOR, M.A. 3s. ADVANCED COURSE. 1s. 9d.
"The calculations which are inseparable from chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge*.
- Heat, Junior.** By JOHN SATTERLY, D.Sc., M.A. 3s.
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.
- Heat, Senior.** By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. Second Edition. 5s.
"The information is accurate and up to date."—*The Journal of Education*.

- Hygiene, First Stage.** By R. A. LYSTER, M.D., B.Ch., B.Sc. Sixth Edition, Revised and Enlarged. 4s.
"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster*.
- Magnetism and Electricity, Junior.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.
"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.
- Magnetism and Electricity, The School.** By R. H. JUDE, D.Sc., M.A. 5s.
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.
- Mechanics and Physics (Mechanics, Hydrostatics, and Heat), An Introductory Course of.** By W. M. HOOTON, M.A., M.Sc., F.I.C. and ALFRED MATHIAS. 2s. 6d.
"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Scottish Educational Journal*.
- Science, Junior Experimental (Physics and Chemistry).** By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 4s.
"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.
- Sound and Light, Senior.** By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 6s.
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature*.
- Sound and Light, Junior.** By JOHN SATTERLY, D.Sc., M.A. 4s.
"Reaches a high standard, with plenty of practical work."—*Guardian*.

Mathematics and Mechanics.

- Algebra, Junior.** By A. G. CRACKNELL, M.A., B.Sc., F.C.P., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.
"Maintains the high standard of excellence we are accustomed to expect from so well-known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.
- Algebra, School.** By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers. 7s. 6d.
"The author has brought the work into closer touch with intelligible calculations, and, at the same time, gives a clear account of the elements of algebraic theory."—*Schoolmaster*.
- Algebra, School (Matriculation Edition).** By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. Second Edition. 6s. 6d.
"As a school text-book this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette*.
- Arithmetic, Preliminary.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. 6d. With Answers, 3s.
"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.
- Arithmetic, The Junior.** By R. H. CHOPE, B.A. Third Edition. 4s. With Answers, 4s. 6d.
"No better arithmetic for school work has come into our hands."—*Scottish Educational Journal*.
- Arithmetic, The School (Senior Locals Edition).** By W. P. WORKMAN, M.A., P.Sc. This edition of the "School Arithmetic" covers the School Certificate Syllabus, and is amplified by a large selection of examples arranged in Graduated Examination Papers. 4s. 6d. With Answers, 5s.
"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World*.
- Arithmetic, Rural.** By Dr. A. G. RUSTON. 5s.
"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education*.

- Geometry, Junior.** By A. G. CRACKNELL, M.A., B.Sc. 4s.
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.
- Geometry, School.** By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc., F.C.P. Second Edition. Enlarged. 6s.
Covers the subject matter of Euclid, I-VI. The arrangement is such that "The School Geometry" and "Geometry, Theoretical and Practical," can be used side by side in class if desired; or the latter can be used as a Teacher's Edition.
- Geometry School (Matriculation Edition).** By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. Second Edition. 5s.
Covers fully the syllabus for London University Matriculation.
- Geometry, Preliminary.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 3s.
"The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical text-book and the tendency to loose reasoning of the practical manual. In this he seems to have succeeded."—*The Journal of Education*.
- Graphs, Matriculation.** By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. 1s. 3d.
"The explanations are remarkably clear."—*Secondary Education*.
- Hydrostatics, Matriculation.** By Dr. WM. BRIGGS and Dr. G. H. BRYAN. Second Edition. 4s.
"The diagrams and illustrations are all very practical."—*Schoolmaster*.
- Mechanics, Junior.** By F. ROSENBERG, M.A., B.Sc. 4s.
- Mechanics, Matriculation.** By Dr. WM. BRIGGS and Dr. G. H. BRYAN. Fourth Edition. 5s.
"Affords beginners a thorough grounding in Dynamics and Statics."—*Knowledge*.
- Trigonometry, Junior.** By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 4s.
"The examples given are numerous in each chapter, the diagrams and the arrangements practical."—*Secondary Education*.

Catalogue of Class Books for Secondary Schools, post free on application.

University Tutorial Press, Ltd., High Street, New Oxford Street, London, W.C.2.

Supplement to THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 636.

JULY 1, 1922.

A SELECTION OF CLASS BOOKS ON ENGLISH, GEOGRAPHY, and HISTORY FOR SECONDARY SCHOOLS.

English.

Preliminary English Course. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 2s. 3d.
A beginner's course in grammar and composition based mainly on inductive methods.

"The author has kept in view the real aim of grammar, namely the production of good English."—*Athenaeum*.

Junior English Grammar with Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition, Revised and Enlarged. 3s.

The recommendations of the Joint Committee on Grammatical Terminology have been completely adopted throughout.
"The work of a teacher who knows the value of compromise between the new and the old methods."—*Journal of the Assistant Masters' Association*.

Junior English Composition. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 3s.

This book provides a progressive course of work suitable for pupils between the ages of twelve and fifteen. It deals especially with those difficulties over which young learners most frequently stumble.

"Examples and illustrations are plentiful, and have been compiled with an eye to their utility as well as their literary merit."—*Educational News*.

Senior Course of English Composition. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. Second Edition. 4s.

A progressive course dealing with such points as the experience of the author has found to be most useful to pupils of the ages of fifteen to eighteen.

"A useful handbook . . . lucid and thoughtful, and deserves popularity."—*Cambridge Review*.

The Matriculation English Course. By W. H. Low, M.A., and JOHN BRIGGS, M.A. Third Edition. 5s.

A graduated course in English grammar, composition, and précis-writing, with numerous examples for exercise.

"Admirably fulfils its purpose. The chapters on précis-writing and indexing are excellent."—*Westminster Review*.

An Anthology of English Verse. For use in Schools and Colleges.

By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition, Revised and Enlarged. 4s.

A selection of the best in all branches of English poetry except the dramatic, from Wyatt to Swinburne.

"The book shows a sound and catholic taste."—*Cambridge Review*.

"It is a charming and truly representative collection."—*Guardian*.

An Anthology of English Prose. For use in Schools and Colleges.

By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 4s.

Illustrates the development of our prose in scope and subject, and in point of style, and gives such an idea of the work of our great writers as shall incite the student to read them for himself.

"This anthology of English prose is compiled with abundant good sense.

Within its limits the choice of writers could not well be bettered. . . . A very useful book."—*Saturday Review*.

The Tutorial History of English Literature. By A. J. WYATT, M.A. Third Edition. 4s.

The chief feature of this book is that it devotes attention mainly to the important aspects of the work of the chief English authors while tracing the development of our literature.

"The book is undoubtedly the best school history of literature that has yet come under our notice."—*Guardian*.

Geography and History.

Principles of Physical Geography. Adapted from the Text-book of Geography. By G. C. FRY, M.Sc. 3s.

"In this serviceable volume Mr. Fry prepares the way clearly and fully for the study of economic and regional geography."—*Educational News*.

Preliminary Geography. By E. G. HODGKINSON, B.A., F.R.G.S., Assistant Master, Crewe County School. Third Edition. 3s.

A book for beginners, containing elementary physical geography, an outline of the geography of the World, and the geography of the British Isles in detail. There are numerous maps and diagrams.

"An admirable text-book, clear, direct, and well suited to the needs of pupils for whom it is intended."—*Literary World*.

Junior Geography. By G. C. FRY, M.Sc. Second Edition. 4s.

A new edition, including outlines of physical as well as regional geography, brought as far as possible up to date to include the changes effected by the Peace Treaty of 1919.

"A concise book of geography on modern lines. The diagrams convey definite visual instruction directly illustrating the text."—*Education*.

Senior Geography of Europe. Being the Geography of Europe, including the British Isles, with chapters on Physical Geography. By G. C. FRY, M.Sc. Adapted from the Text-book of Geography. Second Edition. 5s.

"Mr. Fry brings out the fascination of the broad views of Geography."—*Literary World*.

Preliminary History of England. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A. With numerous illustrations. 4s.

For pupils of the ages of ten to thirteen. Stress is laid on social and economic conditions and on constitutional developments.

"It deals with English history clearly and convincingly. Its illustrations are good and, particularly in military matters, well chosen."—*Secondary School Journal*.

School History of England. By M. E. CARTER, Honours School of Modern History, Oxford. 6s.

Suitable for use in middle forms of schools.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Matriculation Modern History : History of England, 1485-1901. with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. FEARENSIDE, M.A. Second Edition. With Biographies. 6s. 6d.

"An excellent manual."—*School World*.

Government of the United Kingdom, its Colonies and Dependencies. By A. E. HOGAN, LL.D., B.A. Fourth Edition, Revised and Enlarged. 4s. 6d.

An elementary account of the British Constitution suitable for upper forms.

"The account of the present-day institutions of the British Empire is good and clear."—*School World*.

Standard Text-Books—Latest Editions

AT REMARKABLE REDUCTIONS

We have just purchased an Army Surplus of 25,000 Educational Books. Many have been specially strongly bound, and the majority, although soiled, have never been used. The whole of this stock of good up-to-date school books we offer at remarkably low prices.

If desirous of seizing the opportunity, ORDER AT ONCE, as the books are already selling rapidly amongst our clients. The Prices quoted include Carriage.

The figures in brackets represent the number of copies available.

Economy
with Efficiency
in School Book Supply.

We have elaborated a Scheme for reducing expenditure on Text-Books whilst maintaining thorough efficiency.

OUR ORGANIZATION IS CONCENTRATING
ON THIS SPECIAL PURPOSE.

May we send full particulars?

Letters expressing gratitude for prompt and efficient service have been received from the leading Public Schools, Colleges, Grammar Schools, and Convents throughout the Country.

IMPORTANT NOTE to our Clients—To ensure prompt delivery supplies for next Term should be ordered as early as possible.

REVIEWS AND MINOR NOTICES.

DEMOCRATIC DEVELOPMENT OF SECONDARY EDUCATION.

Secondary Education for All: A Policy for Labour.

Edited by R. H. TAWNEY. (2s. 6d. net. Labour Party and Allen & Unwin.)

This is a lively, well-informed, and closely reasoned statement of democratic doctrine as applied to the problem of secondary education. Its fundamental thesis is that all normal children, irrespective of the income, class, or occupation of their parents, should receive a secondary education of one type or another from the age of eleven to the age of sixteen. The present grading of schools into elementary and secondary has, as a matter of historical fact, always been based upon the social distinction between the working and the middle classes, and the present opportunities of passing from the elementary to the secondary school are, it is held, pitifully inadequate. Nothing short of an entire re-grading of schools will meet the case. There should be nursery schools for children under seven, preparatory schools for children between seven and twelve (these two together constituting the primary stage), and secondary schools for the ages between twelve and sixteen to eighteen. The proposal to universalize secondary education up to sixteen manifestly involves a great extension of secondary school accommodation, and this could only be created gradually. Meantime the present illogical distinction between secondary schools on the one hand, and central and junior technical schools on the other, should be broken down. The latter should be brought within the secondary system, to which they really belong, and from which they are separated only for social reasons. If it be contended that only a certain proportion of children of twelve years of age are able to profit by secondary education, the answer is that this is perfectly true of the kind of secondary education now provided, but that other kinds ought to be provided. Fees should be abolished in secondary schools, and maintenance allowances should be granted to the extent that is necessary. As regards finance, the points are taken that recent additions to cost are mostly accounted for by increased salaries to a profession that was sweated before the war, and that, even so, the proportion of national expenditure devoted to education fell from 7.28 per cent in 1913-14 to 4.9 per cent in 1921-22.

Such is the main drift of argument in this exceedingly able and stimulating little book—a book which we recommend all teachers to read with care, whatever their general attitude towards the Labour Party may be. At bottom the whole question is of course a social and political one, upon which teachers may be expected to be nearly as much divided as other people are. One may see and admit the logic of the Labour position, and yet sympathize with the middle-class parent who desires his children to associate with children whose habits, whose speech, and whose standards of personal cleanliness he can approve, but who has to pay heavily for such association, besides helping to pay for the education of others. Still, it may be possible to accept the educational part of the Labour Party's programme as an ideal which can only be realized gradually, with concurrent social improvement. At any rate, it is a high merit in any party to have so clear and complete a programme, and to have reasoned it out with such marked force and ability.

The optimistic and challenging tone of the book is well illustrated by its attitude towards the Act of 1918, which is for the present, of course, mostly waste paper. That Act is criticized as not having fairly and squarely faced the question of the respective functions of primary and secondary education. And the ill-fated continuation school scheme is denounced as in any case a poor makeshift. "Acting with the worst intentions," the opponents of the Act "have saved us from the blunder of merely

tacking a system of continuation classes on to the present elementary schools." Very well, says the indomitable labour reformer, we are not really sorry, because now we have, at any rate, a clear field for a fight round the question of free full-time secondary education for all, up to the age of sixteen.

PHILOSOPHY OF LIFE.

The Tragic Sense of Life in Men and in Peoples. By MIGUEL DE UNAMUNO. Translated by J. E. CRAWFORD FLITCH. (17s. net. Macmillan.)

Don Miguel de Unamuno, Professor of Greek at the University of Salamanca, is one of the most striking among the contemporary writers of Spain. His standing is well indicated in an introductory essay by Don Salvador de Madariaga, in which, by the way, there is more Wordsworth than is called for. Probably our Carlyle is the nearest approach to the type of Unamuno. His treatment is rugged and vigorous, highly coloured, and full of the personal appeal. As journalist, novelist, and man of the world, de Unamuno is free from the pedantry that is so commonly associated with the professor's chair. He wants to get at real life and at real men. He seeks the flesh and blood man under the philosopher's gown. In his violently antithetic way he subordinates the philosophy to the man. The desire to live and to be immortal is maintained to be the vital force that keeps humanity going. The arguments in the text are fanciful and figurative. Our author does not deny this, and tells us bluntly that he does not "claim to discuss otherwise than by metaphor." It cannot be denied that there is a certain charm in the first-hand approach here made to most of our old philosophic problems. The terms are depolarized and the reader cannot but be stimulated to thought, however outraged his sense of philosophic decorum may be.

It is difficult to give a definite statement of the philosophical standpoint here adopted. De Unamuno himself puts the words into his critic's mouth: "This man comes to no conclusion, he vacillates—he is full of contradictions—I can't label him. What is he?" He is good enough to supply an answer to his own question: "Just this—one who affirms contraries, a man of contradiction and strife . . . one who says one thing with his heart and the contrary with his head, and for whom this conflict is the very stuff of life." It is not difficult to realize how out of this paradoxical attitude a tragic sense of life may be developed, and the thoughtful reader will feel stirred up to individual intellectual struggle, in spite of the occasional contempt thrown upon intellect in the text. The book can hardly be described as organized. Its author confesses that in writing each essay he has not had before him a copy of any of those that had preceded it, and thus they have come forth "full of inward contradictions—apparent contradictions at any rate—like life and like me myself." With all this confusion there go great learning, keen insight, wide knowledge of the world. Between the brilliant paradoxes and the glittering metaphors there are blocks of solid sense. The reader is made to feel that he is in the hands of a master of the art of living, equally strong on the religious, the philosophical, and the practical plane. De Unamuno is at home in English thought; it is only fair that we should get an insight into his. The book repays study.

ERRORS, DREAMS, AND NEUROSES.

Introductory Lectures on Psycho-Analysis: A Course of twenty-eight Lectures delivered at the University of Vienna. By Prof. SIGM. FREUD. Translated by J. RIVIERE. (18s. net. Allen & Unwin.)

A translation of this book has already appeared in America, but in the Preface to the present volume Dr. Ernest Jones explains that the American work has been so badly done that Mrs. Riviere's version is necessary. The book falls into three parts: the first dealing with

Errors, the second with Dreams, the third with General Theory of the Neuroses. For professional teachers the first part is of great interest, and many of us will regret that this part is so short compared with the others: there is room for a separate work on this aspect. Dr. Freud wisely makes use of this simpler section to provide a general introduction to the whole subject. He tells us that he must treat his audience—we gather that they are medical people—as if they were beginning at the very beginning. His method is particularly pleasing to a skilled teacher. Whatever value his subject-matter has, the method of exposition is excellent.

In reading the work as a whole there is something curiously reminiscent in the minds of those who have read the Master's previous writings. It is not that there is actual repetition, though some of his illustrations have been used before: but rather an air of familiarity. Along with this, however, is the satisfaction of knowing that we are here dealing with first hand authority. We are so accustomed to reading the work of disciples that it is gratifying to get at the Master himself. It cannot be said that there is anything particularly fresh in the volume, but matters are certainly put more clearly than they are in the earlier treatises. Dr. Freud's attitude towards hysteria is made clear and certain misunderstandings removed. The chapter on Resistances is particularly satisfactory. But what specially interests us here is Freud's attitude towards education. "The educability of a young person as a rule comes to an end when sexual desire breaks out in its final strength. Educators know this, and act accordingly; but perhaps they will yet allow themselves to be influenced by the results of psycho-analysis so that they will transfer the main emphasis in education to the earliest years of childhood from the suckling period onward." He returns to this point several times, and at one place tells us that psycho-analytic treatment is a kind of re-education. If his view is right it deserves our serious attention. Accordingly it will be well that teachers who take up the study of psycho-analysis should specialize on this point. If Freud is to be believed, there should be no more talk about eliminating the nursery schools. "The little human being is frequently a finished product in his fourth or fifth year."

MODERN CHEMISTRY

Inorganic Chemistry. By Prof. T. MARTIN LOWRY. (28s. net. Macmillan.)

The change that has taken place in our outlook on inorganic chemistry as a result of the development of physico-chemical methods and conceptions is too well known to require emphasizing in these days. A glance merely at the illustrations in the present excellent volume reveals the trail of the physical chemist, and marks the contrast with the corresponding textbook of twenty to thirty years ago. Figures of molecular structure, equilibrium diagrams, photomicrographs and electric furnaces are common features in the volume, while the discussion of properties and reactions is constantly in terms of eutectics, polymorphism, solid solutions, ionization, and the like. The record of Prof. Lowry's own work is a guarantee that on these lines the treatment is sound and authoritative.

The contents of the book are presented in four main parts, viz: I.—Historical and Introductory; II.—Non-metals; III.—The Metals: typical series; IV.—The Metals: transition series. The first of these, in so far as it is historical, is largely adapted from the author's *Historical Introduction to Chemistry*, and contains many valuable features. One notes, for example, the prominence given to Avogadro's hypothesis, and the full exposition of the part which it has played in the development of modern chemistry.

Part I contains also a good deal of pure physical chemistry, and such topics as electrical conductivity, the phase

rule, solubility product, hydrolysis, distribution ratio, osmotic pressure and liquid crystals are discussed. Whilst admitting that familiarity with these conceptions is necessary for the intelligent study of the later parts of the book, the reviewer feels a little doubtful whether such a rapid survey of physical chemistry as is possible in the opening chapters of a text-book of inorganic chemistry can really benefit the reader unless he has previous knowledge of that branch of the science. The effort made in Part I to present physical chemistry in a condensed form leads in one case at least to a somewhat questionable exposition. Thus on page 87 we find: "The Law of Mass Action states that the products of the active mass of the components on the two sides of a balanced equation are in a constant ratio."

The main portion of the volume contains an interesting, and often novel, presentation, on up to date lines, of the facts of systematic inorganic chemistry. The author has secured the collaboration of experts in the preparation of sections dealing with Radioactive Elements, Isotopes, Glass, and Photography, and these add distinctly to the value of the book.

Attention may finally be directed to two minor points in which correction appears desirable. The Weston cell is depicted twice, on page 198 and on page 876, but in the one case mercuric, and in the other case mercurous sulphate, is put down as a constituent of the cell. Then the value given on page 127 for the number of particles in 1 litre of a gas at N.T.P., viz: 3×10^{23} , is about 10 per cent higher than the correct value 2.7×10^{23} given on page 141.

BIOGRAPHY.

General Robert E. Lee after Appomattox. Edited by Prof. F. L. RILEY. (\$2.50. Macmillan.)

This is an interesting work of piety published half a century after it was normally due. General Lee, the famous Commander of the Southerners in the American Civil War, became President of Washington College (Lexington, Virginia) in 1865, and in that position he remained until his death in 1870. His fine character, his great reputation, and his administrative ability made his five years of office a conspicuous and memorable success. This memorial volume, enriched by the reminiscences of all such surviving students of his as can be traced, gives an account of this closing period of his notable career. It is adorned by some fine portraits and photographs.

EDUCATION.

La Science de L'Education. By DR. J. DEMOOR and T. JONCKHEERE. (6s. net. M. Lamertin, Brussels and Libraire; Felix Alcan, Paris.)

This work, the joint production of a professor in the medical department and the director of what we should call the training department of the University of Brussels, eminently deserves its title. Pedagogy, say the authors, has long been a speculative science, cultivated by philosophers and sociologists, and dependent for its conclusions upon reasoning rather than upon observation; but under the influence of the biological sciences pedagogy is changing its character, basing itself upon a scientific study of the child, his genesis, his development, and his capacity of adaptation. The first part of the book deals with biological bases, leading up to a study of heredity, evolution, growth, and development; the second part with the nervous system considered from the pedagogic point of view; the third with psychological aspects; and the fourth with the evolution of the school. In the first three parts the scientific groundwork is very clearly and ably set forth, whilst the practical applications are never lost sight of, such subjects as co-education, individual teaching, the question whether two or more languages should be learnt concurrently, sex instruction, and so on, being discussed in their appropriate connexion. The last part, on the evolution of the school, is very thorough, including *inter alia* a full exposition of the place of what we call special schools. We commend the volume to our readers, not only on its own merits, which are great, but also as affording an indication of the way in which pedagogy is being conceived in another country.

ENGLISH.

Neddy: The Story of a Donkey. By MRS. HERBERT STRANG. *Betty's Friend.* By M. STUART-LANE. (1s. 4d. net each. Oxford University Press.)

Herbert Strang's Readers are carefully graded in four stages for children between the ages of seven and twelve. The illustrations are well drawn, the print admirably clear, and adapted in size to the age of the reader, that in Grade I being largest and blackest. Mrs. Strang's story of the donkey Neddy's disobedience and consequent afflictions will please the youngest readers, especially as it has a happy issue; while "Betty's Friend" will thrill the child of ten with its account of the Great Fire and the doings of the abominable press-gang.

Rob Roy. By Sir WALTER SCOTT. *The Romany Rye: A Sequel to "Lavengro."* By GEORGE BORROW. (1s. 6d. net each. Nelson.)

Both the ordinary reader and the school owe thanks to the publishers of this cheap series of masterpieces, obviously direct descendants of the famous pre-war Sixpenny Classics, well-printed and presentable volumes, strongly enough bound to resist for long the hard wear of class usage. No space is wasted on notes or introductions, but the text is given unabridged.

Language: Its Nature, Development, and Origin.

By Prof. O. JESPERSEN. (18s. net. Allen & Unwin.)

This is a book that can be unreservedly recommended to all who are interested in the evolution of language and in the history of philology. There is not a dull or uninteresting page in it, and the lucid exposition and shrewd, balanced criticism of the various hypotheses which have been advanced to explain the origin and growth of language are admirable.

The volume is divided into four books, entitled respectively: History of Linguistic Science, The Child, The Individual and the World, Development of Language.

Prof. Jespersen's sketch of the building up of the great science of philology from ancient times to our own is probably the completest written in English; all the great philologists of the past are reviewed and the contribution of each to the advancement of linguistic science appraised and put in the right perspective. Names do not inspire Prof. Jespersen with awe or blind him to faulty speculations; neither is he wanting in appreciation when it is due. He appears to us, however, to underestimate the importance of Pott, and mention should have been made of Arquetil du Perron and Edward Llwyd, the Welsh grammarian who anticipated some of Grimm's speculations by over a century. Some of the terms used by Prof. Jespersen, e.g. *apophony* for *ablaut* or *gradation*, *Gothonic* for *Germanic* seem to have little to recommend them.

Book II, The Child, will probably be considered the most interesting part of the volume for its originality, acute observation, and freshness of treatment; and readers whose nocturnal perambulations have failed to silence their howling treasures will find comfort in the remark, based on experience, "that the child who screams the loudest as a baby becomes the best singer later."

The book is well written in a clear and attractive style.

FRENCH.

The French Quarterly Review. March, 1922. (3s. Manchester University Press.)

This is the Molière Tercentenary number. Professor Ker contributes a literary study, "Molière and the Muse of Comedy," in which his extensive knowledge and critical insight are seen to advantage. Mr. Cloudesley Brereton contributes a *discours*. M. Egli's essay, "Le Régionalisme dans la littérature française" displays an extensive acquaintance with French novels. Dr. R. L. G. Ritchie shows once more by a minute analysis of a passage the apparent easiness and real difficulty of translation from French prose. We commend his paper to those who essay our prize competitions. There are two "Chroniques" of contemporary French literature.

GEOGRAPHY.

Imperial Military Geography. By J. FITZGERALD LEE. (Clowes. 12s. 6d.)

This book has been used by military students in many countries since it was first published in 1908, and the edition now issued can be recommended not only to candidates preparing for the Army Entrance and other examinations, but also to students in schools and colleges where advanced work in geography is being done. The author is undoubtedly right when he asserts that the science of geography in general and military geography in particular has had more influence on the history of the human race than any other science, and that in all ages soldiers have done more for geography and have been better geographers than any other class of men. The main sections of the book deal particularly with the British Empire, the new map of Europe and the Treaty of Versailles, Africa and the Middle East. Throughout the work great stress is laid

on the strategic importance of frontiers, railways, and fortresses; in every case the military problem is fully discussed in relation to the geographical conditions of the country. At the end of the book there are nearly a hundred questions selected from Army and Staff College Examination papers and a complete answer is given to each question.

An Introduction to Applied Geography. By A. STEVENS. (6s. net. Blackie.)

Written in a scientific style, this book deals with the earth as a planet, the making of maps and charts, climate and weather, transport by sea and land. Primarily the work is intended for the use of navigators, land surveyors, mining engineers, and prospectors, but it might also be used by students taking an advanced course of geography in secondary schools. In the chapters on map projection and triangulation, a knowledge of trigonometry is assumed.

A Progressive Course of Comparative Geography on the Concentric System. By P. H. L'ESTRANGE. Ninth Edition. Revised and Enlarged. Parts V and VI. (2s. 6d. net. Philip.)

The publication of these two parts completes the new edition of this well-known work. Part V deals with the three Southern Continents and Part VI with the British Commonwealth of Nations. As in the other volumes of the series, the lessons are well arranged and full of trustworthy information; they are illustrated with excellent maps, diagrams, and pictures.

Edina Geographies.—By THOMAS FRANKLIN. Book IV., *Africa*. (1s. net. Johnston. Macmillan.)

In this little book, both the natural regions and the political divisions of Africa are well described, and numerous sketch maps and exercises add to the usefulness of the work. For so elementary a book, however, some of the paragraphs contain too many place names.

Elementary Studies in Geography and History.—By SIR H. J. MACKINDER. *The Nations of the Modern World*. Fifth Edition. Completely revised. (3s. 6d. Philip.)

This well-known book has now reached its fifth edition, and as in the earlier editions, the descriptions are fully illustrated with maps and pictures. In the various lessons historical events are presented in their appropriate geographical setting and consequently the reader gains a knowledge of the chief contrasts of the political and commercial world. Although carefully revised, it has been found impossible to remodel the chapters so as to include a concise view of the war and the world after the war; for this purpose another volume will be added to the series.

HISTORY.

Historical Atlas of South Africa. By Prof. ERIC A. WALKER, M.A. (Oxon and Cape). (10s. 6d. net. Oxford University Press.)

Prof. Walker, of the University of Cape Town, has produced an historical atlas of South Africa which may be regarded as a model for the guidance and stimulus of historians and geographers at Colonial colleges throughout the British Empire. Not only will this admirable collection of maps be of the highest service in South Africa itself, it will also be an invaluable means of spreading far and wide a knowledge of the process by which the great Union has been built up. The atlas contains twenty-six plates, which comprise a total of thirty-two maps and plans. The first of the series exhibits the results of the voyages of exploration and discovery which terminated in the middle of the sixteenth century. The latest in order of time illustrates the German campaigns in Africa during the years 1914-1918. Twenty-one pages of letterpress precede the atlas proper; each map is dealt with in detail, and the facts which it is intended to elucidate are clearly set forth. The paper, the print, and the cartography are all excellent. Only three points of criticism present themselves: (1) the atlas (10x14½) is inconveniently large; (2) there is no index; (3) the letterpress does not face the map to which it relates.

Kings and Queens of England.—Henry VI. By MABEL E. CHRISTIE. (16s. Constable.)

Messrs. Constable's interesting series of biographies of the notable kings and queens of England seems to be bent on the task of clearing off the numerous Henrys first. Henry VII, Henry II, Henry V, are followed now by Henry VI. Miss Christie is a capable and well-equipped historian, and she has accomplished in a workmanly and competent manner the fairly simple and straightforward task of telling the story of the good man, but bad king, who wore the crowns of England and France

during the turbulent years 1422-1461. Together with the life of the monarch she incorporates a good deal of the general history of the time. A useful bibliography indicates the main sources of information. Numerous maps and authentic portraits enhance the value of this attractive volume.

MATHEMATICS.

Elementary Statics of Two and Three Dimensions. By Prof. R. J. A. BARNARD. (7s. 6d. Macmillan.)

We had occasion, some time ago, to review the "Elementary Dynamics" by the same author, and the favourable impression then formed is amply confirmed by this companion volume. The text is comprehensive, but not overloaded with detail. Acting doubtless on the maxim that it is easier to learn the calculus than proofs which avoid its use, the writer introduces it in his treatment of virtual work and centres of gravity. There is an adequate though quite elementary account of the principal theorems relating to forces in three dimensions, and the final chapter deals with vectors in space.

MISCELLANEOUS.

A New and Scientific Presentation of Elementary Book-Keeping. By H. W. HOUGHTON. (4s. net. Collins.)

A useful text-book for commercial classes in evening and continuation schools. The object is to place before the student the principles of Double-entry Book-keeping in a form which is on sound educational lines. The final results to be obtained are illustrated from the first enunciation of the principles, and the stages known as "Book-keeping to the Trial Balance" and "Book-keeping to the Balance Sheet" are discarded. There is a valuable chapter on proving the accuracy of book-keeping entries, while the more advanced students will find the chapters dealing with the Accounts of a Partnership, Reserves and Depreciation, very helpful.

PSYCHOLOGY.

Disguises of Love: Psycho-analytical Sketches. By Dr. W. STEKEL. Authorized translation by ROSALIE GABLER. (6s. 6d. net. Kegan Paul.)

There is more of sketch than of psycho-analysis in this little volume. We have here in fact the artistic aspect of the new psychology of the unconscious. Dr. Stekel appears to be a psycho-therapist in full practice at Vienna, but the volume before us is written more in the fashion of a literary essay than a scientific treatise. It practically demands a general knowledge of the psycho-analytic principles before it can be understood. Its value is rather that of a series of illustrative examples of a principle already expounded, but here, as happens so often elsewhere, the examples are a good deal more interesting than the principles, so it is likely that the book will have a good sale, particularly in view of its intriguing title. The general view of human nature is low, and the effect of the volume is on the whole depressing. Seldom is a hopeful note struck, though many will welcome the exceptionally optimistic words, "The will has the power to transform the body. People who sufficiently desire to be beautiful eventually become so." Against this has to be put the depression of the chapter on "The Will to Ugliness." In chapter XVII Dr. Stekel writes on a much higher level than elsewhere, and for the time becomes elevating. The literary bias of the book becomes too pronounced at the end for the author to restrain himself any longer, and he openly breaks out in a purely literary chapter called "Brevities," in which he has a series of maxims after the manner of Rochefoucauld, and not so far behind him either. These have a general reference to the new psychology, but are by no means confined to it. One wonders what the attitude of the elect psycho-analysts will be toward this eminently exoteric and human volume.

RELIGIOUS KNOWLEDGE.

Lessons on the Way. By Dr. P. DEARMER. (3s. 6d. net. S.P.C.K.)

Dr. Dearmer's volume provides a series of thirty lessons based upon the first part of the Church Catechism ("The Covenant"). The material provided is useful, and is set forth in a breezy and rather unconventional way, which, perhaps, will not appeal with equal force to everybody. But Dr. Dearmer's illustrations, though sometimes strange and even startling, are usually apposite.

A Commentary on the Holy Bible. By Various Writers. Edited by the Rev. J. R. DUMMELOW. Old Testament: Genesis—Esther. New Testament: St. Matthew—Acts. (3s. 6d. net each. Macmillan.)

The present re-issue, in separate form, of part of the Old

(Continued on page 480)

Cambridge University Press

RECENT PUBLICATIONS

Studies in Literature. Second Series. By Sir ARTHUR QUILLER-COUCH, M.A., King Edward VII Professor of English Literature in the University of Cambridge. Demy 8vo. 14s net.

"The Lectures here printed are not only full of life, humour, and eloquence, they are also full of knowledge. Every page of them brings its evidence of their author's lifelong and loving intimacy with English letters. . . . Few will lay down this book without having caught glimpses of some truths of which, but for it and its author, they would have had no inkling at all."

The Times Literary Supplement.

Herodas: The Mimes and Fragments. With notes by WALTER HEADLAM, Litt.D. Edited by A. D. KNOX, M.A. With a plate. Demy 8vo. £3 3s net.

The Editor's aim has been partly to produce a complete edition, partly to give as fully as possible the results of all Dr Headlam's researches. A great many of the notes which are printed here are as Dr Headlam left them; a large number of the remainder have been written by the present editor, together with text, translation, critical notes, and indexes.

The Roman Fate. An essay in interpretation. By W. E. HEITLAND, M.A. Demy 8vo. 3s net.

This book consists of three papers (I, Elements of strength in large states. The career of Rome considered from (a) political and (b) economic points of view; II, Recent applications of anthropological and biological Science to the interpretation of human history; III, Roman history reviewed from this scientific point of view. The tragedy of misfits), which constitute an attempt to account for the course of Roman history in its main outlines, with criticism of some striking theories recently applied.

Society and Solitude. By E. T. CAMPAGNAC. Professor of Education in the University of Liverpool. Crown 8vo. 8s 6d net.

A series of essays dealing with:—The Eternal Society; Education—The Making of Society and its Members; Agents and Processes; Nature and Discipline; Conversation with the World; Life and Language; Subjects of Discourse; Science and Sciences; Work and Play; Originality and Convention; Ourselves and our Neighbours; Unity and Difference; Artists and Men; The Teacher's Art; Imprisonment and Freedom; Silence, Meditation and Pain.

Principia Ethica. By G. E. MOORE, Litt.D. Second impression. Demy 8vo. 15s net.

"A clever, interesting, and stimulating volume, which anyone will do well to read who wishes to obtain clear ideas in an important department of philosophy."—*The Literary World.*

Medieval France. A Companion to French Studies. Edited by ARTHUR TILLEY, M.A. With 17 plates and 2 maps. Demy 8vo. 25s net.

"Of whatever the student be in search he will find here, if not the thing itself, directions for finding it. Indeed, we do not think there exists any one book of this size which will provide us with the same amount of information on medieval England as this on medieval France."—*The Times Literary Supplement.*

Balzac. Five Short Stories. Edited by ARTHUR TILLEY, M.A., Fellow and Lecturer of King's College, Cambridge. Crown 8vo. 5s 6d net.

These five stories are very different in character; the first is a study of provincial life and everyday human passions, the second is a medieval morality, the fourth is a story of a crime, the third and fifth are notes of psychological cases. But all alike have the same arresting quality, the same power of holding captive the imagination.

History of Holland. By GEORGE EDMUNDSON, D.Litt., F.R.G.S., F.R.Hist.S. With 2 maps. Demy 8vo. 22s 6d net. Cambridge Historical Series.

"Had we been asked at any time in recent years to name the leading authority on Dutch history in this country, the answer would certainly have been the name of the author of this work."—*The Times Literary Supplement.*

The Elements of Astronomy. By D. N. MALLIK. With numerous diagrams. Demy 8vo. 14s net.

The author's object has been to give a brief and clear account of those portions of Astronomy which can be dealt with, with the help of elementary mathematics. In the selection of subject-matter and its treatment he has been guided by his experience as a teacher of Astronomy, so that the book should be found to meet the requirements of students by stimulating thought and ensuring scientific accuracy.

Supplement to Notes on Qualitative Analysis. Concise and Explanatory. By H. J. H. FENTON, Sc.D., F.R.S., F.I.C., F.C.S., University Lecturer in Chemistry, Cambridge. Crown 4to. 3s 6d net.

The author gives in this Supplement a concise list of the reactions of the rarer elements, selecting those elements which can be identified by chemical tests alone, and has included in addition an account of the reactions and properties of a considerable number of organic and inorganic compounds not already described in the earlier part of the book.

Principles of Geometry. Vol I, Foundations. By H. F. BAKER, Sc.D., F.R.S., Lowndean Professor of Astronomy and Geometry. Demy 8vo. 12s net.

The volume is a most interesting and pertinent one, and the student will learn more from it in a month than from many of the text-books crammed with intricate details of what—we have often wondered why—is called 'elementary geometry.'—*The English Mechanic.*

New Mathematical Pastimes. By Major P. A. MACMAHON, R.A., D.Sc., Sc.D., LL.D., F.R.S. Demy 8vo. 12s net.

"In this book Major Macmahon opens up a new field for mathematical recreation. It is like no other previously published."—*Education.*

"Not a few of the 'Pastimes' will be found refreshingly novel and surprisingly interesting."—*The English Mechanic.*

A Little Book on Water Supply. By WILLIAM GARNETT, M.A., D.C.L. With 53 text figures. Demy 8vo. 6s 6d net.

From the point of view of general education, water supply has a bearing on a great many school subjects, and the teacher can use this little book as dealing with a central interest and affording a series of texts for lessons on the greater portion of the "Circle of the Sciences."

Cambridge Geographical Text-books:

Senior. By G. F. BOSWORTH, F.R.G.S. With 71 illustrations and 29 maps and diagrams. Crown 8vo. 7s 6d. Previously published:—**Junior.** By A. R. CHART-LEIGH, M.Sc. 5s. **Intermediate.** By A. J. DICKS, B.A., B.Sc. Third edition. 6s.

"Clearly written, containing a vast amount of information, simply paraphrased, and beautifully illustrated, it represents the high-water mark of such work."—*Education, on the Junior Text-Book.*

Hampshire. By TELFORD VARLEY. With maps, diagrams, and illustrations. Crown 8vo. 3s 6d. Cambridge County Geographies.

"For teachers it should be invaluable. . . . It is really a book that one cannot do without. The descriptions of scenery, local characteristics, and the like are extraordinarily well done, and all through the book the amount of solid information conveyed is really amazing."—*The Hampshire Observer.*

Banffshire. By W. BARCLAY, Editor of "The Banffshire Journal." With maps, diagrams, and illustrations. Crown 8vo. 3s 6d. Cambridge County Geographies.

"Here may be read much not only of the geography, but of the humanities of Banffshire."—*The Times Educational Supplement.*

"Well done, written in lucid style, exceedingly well arranged, finely illustrated. . . . will be welcomed and read with great interest."—*The Banffshire Journal.*

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

Testament (Genesis to Esther) and part of the New Testament (St. Matthew to Acts) Commentary edited by Mr. Dummelow, will doubtless prove useful in many ways. In its original form, as a one-volume Commentary on the entire Bible, it achieved a very remarkable literary success. The Commentary is handy, scholarly, and wonderfully well balanced. For many readers it provides just what is necessary—a serviceable explanation of the A.V. text, with necessary corrections. For those who are more fully equipped for critical study the one-volume Commentary edited by Peake will provide more adequately. The reprinted volumes are remarkably cheap.

SCIENCE.

A Course of Practical Organic Chemistry. By Dr. T. S. PRICE and Dr. D. F. TWISS. Third Edition. (6s. 6d. Longmans.)

This well-known manual of practical organic chemistry has reached a thoroughly deserved third edition, a fact which is worthy of comment and congratulation in view of the flood of books of this type. The book was written to provide for evening students in technical colleges a course of work which would cover the syllabuses of the Board of Education and for degree examinations. Only minor alterations have been found necessary because the general plan of the first edition was sound and comprehensive. In brief the authors discuss the general quantitative operations of the organic laboratory, selected preparations and the recognition of the more important functions. The treatment is concise and accurate and there is no possible reason why the third edition should not be the precursor of future reprints.

Fundamental Principles of Organic Chemistry. By Prof. CHARLES MOUREU. Authorized Translation from the Sixth French Edition by W. T. K. BRAUNHOLTZ. (12s. 6d. net. Bell.)

Prof. Moureu is one of the most eminent French teachers, and, therefore, any contribution from his pen is worthy of serious attention, particularly if it be an attempt to present the fundamental principles of organic chemistry. The author, in the first place, has tried to introduce the principal acquisitions to our knowledge as soon as they have come to light, and in the present edition he discusses new developments of the Atomic Theory, variable valency, molecular magnitude, recent work on stereochemistry, dyestuffs, the relation between chemical constitution of physical properties and the mechanism of reaction. Short historical notes and exceptionally frequent reference to authors and dates render the work unique considering its scope and purpose. In many ways the author breaks away from the traditional presentation of his subject; he discusses the aromatic hydrocarbons, quite logically, immediately after the open chain series and similarly phenols in conjunction with alcohols. Such a departure from the usual procedure makes the book of especial benefit to the student who has been reared upon Richter and his successors, and for this reason alone Moureu will prove to be a supplementary text-book of unusual merit.

Prof. Pope contributes an introduction and the translation has been excellently carried out by Mr. Braunnholtz.

The Science of Everyday Life. By E. F. VAN BUSKIRK and E. L. SMITH. (7s. Constable.)

To inculcate scientific habits of thought, careful observation, and a permanent interest in science is the object of this admirable little book. The authors show how air, water, food, clothing, homes, and everyday machines, furnish useful problems for experimental investigation by pupils of "junior high school age," and they give simple and clear directions for such work, as well as a mass of interesting information on the subjects dealt with. The book is of American origin, and many of the references in it will be unfamiliar to British pupils. It is attractively illustrated.

Man—The Animal. By Prof. W. M. SMALLWOOD. (12s. net. Macmillan.)

This book is not greatly concerned with comparative anatomy, nor with the details of physiology, as might be supposed from the title. It deals rather with broad aspects of the physical life of man, such as the activities of cells and protoplasm, food as the source of his energy, the outlines of reproduction and heredity, the mechanism of sensation and the problems of learning, and ends with a thoughtful chapter on biology and human progress. All these subjects are of engrossing interest and importance, and Prof. Smallwood's book will serve to correct the perspective of the layman's views of their significance both for the individual and for the community. The book is eminently readable throughout, since the language is nowhere forbiddingly technical, and the text is illustrated by excellent plates and drawings.

Student Christian Movement

SUGGESTIONS FOR A SYLLABUS IN RELIGIOUS TEACHING. By G. B. AYRE. New edition revised and enlarged. Crown 8vo. 4s. net.

A seven years' course of religious instruction for children, intended primarily for use in day schools, though valuable also to Sunday School teachers and parents. The first edition of this book attracted widespread attention, and is recognized by authorities as one of the outstanding books on this subject. The new edition has been thoroughly revised and greatly enlarged and might almost be described as a new book.

Second Edition ready.

THE MEANING OF THE OLD TESTAMENT. By HUGH MARTIN, M.A. Crown 8vo, cloth, 3s. 6d. net; Paper, 2s. 6d. net.

A guide to the main results of modern scholarship. "Positive in statement, without being provocative, sparing in detail without being superficial, reverent in tone without surrender to mere tradition, it presents a constructive interpretation of the Old Testament that conserves every spiritual value and solves many a problem for the Bible Student."—*United Methodist*.

SOME CHRISTIAN IDEALS IN THE TEACHING PROFESSION. By Miss A. S. PAUL, late Head Mistress of Clapham High School. Crown 8vo. 3s. net.

"All who believe that education is best interpreted in the light of ideals will read this book; those who think otherwise must be persuaded to do so."—*Education*.

Fourth Impression in the Press.

PSYCHOLOGY AND THE CHRISTIAN LIFE. By T. W. PYM, D.S.O., M.A., Head of Cambridge House. Crown 8vo, 4s. net; Paper, 2s. 6d. net.

"Contains the best discussion of the religious bearings of the new psychology which has yet appeared."—*Westminster Gazette*.

32 RUSSELL SQUARE, LONDON, W.C. 1.

Thoroughly Revised to Date!

CHAMBERS'S NEW GEOGRAPHY OF THE WORLD.

216 PAGES 2/-

Illustrated by 13 Coloured Maps and numerous Uncoloured Maps and Diagrams.

The introductory section gives the pupil the necessary "first notions in Geography," following which each of the countries forming part of the British Isles is described in detail. Each of the Continents is then described in turn, special prominence being accorded to the various portions of the British Empire. Commercial Geography receives special attention throughout the volume. A chapter is appended dealing with the Interchange of Productions and the Great Trade Routes from the British Isles.

The extensive changes consequent upon the Great War of 1914-1918 practically make this a new work.

**NORMAL
CORRESPONDENCE COLLEGE.**

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.
(FOUNDED 1889.)

**THE NORMAL
CONVERTS YOUR STUDY
INTO A UNIVERSITY.**

Founded nearly thirty years ago by teachers for teachers, the Normal stands to-day a monument to the fact that at its inception it was based upon right principles and built on sound methods. The Normal has stood the test of time, and is firmly established as the most reliable Correspondence College. The keystone of the Normal is the concentration of the efforts of most highly qualified and experienced Tutors on the requirements of the individual student. Thus the Normal converts your study into a University.

University Tutorial Press.

BOTANY AND NATURE STUDY.

Text-book of Botany. By J. M. LOWSON, M.A., B.Sc., F.L.S.
Fifth Edition, Revised and Enlarged. 9s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

Practical Botany. By FRANCIS CAVERS, D.Sc. 2nd Ed. 6s. 6d.

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

Life Histories of Common Plants. By FRANCIS CAVERS, D.Sc., late Lecturer in Biology at Goldsmiths' College. 4s. 6d.

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

The Aims and Methods of Nature Study: A Guide for Teachers. By JOHN RENNIE, D.Sc., F.R.S.E. Lecturer in Natural History in the University of Aberdeen. With an Introduction by Professor J. ARTHUR THOMSON. 5s.

School Lessons in Plant and Animal Life. By JOHN RENNIE, D.Sc., F.R.S.E. 6s. 6d.

The aim of the book is to help Teachers of Nature Study. It supplies a course of over eighty lessons in Nature Study, with full guidance as to how to learn and how to teach the subject.

School Gardening, with a Guide to Horticulture. By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous illustrations and plans. 4s.

This book affords Teachers sound guidance in the correct methods of teaching this subject and of organizing the classes.

HISTORY AND GEOGRAPHY.

Economic History of England. By MILTON BRIGGS, M.A., B.Sc., F.R.Econ.S. 8s. 6d.

An elementary account of the economic development of England down to the present day.

A Social History of England. By FREDERICK BRADSHAW, D.Sc., M.A., Lecturer in History at Armstrong College, Newcastle-on-Tyne. *Second Edition.* 6s.

An elementary account for colleges and upper forms in schools of the social and economic development of England.

Groundwork of English History. By M. E. CARTER, Honour School of Modern History, Oxford. 4s.

An attempt to present the salient facts of English History in a readable but definite form unencumbered with irrelevant details.

A History of the British Colonies. By H. L. JONES, B.A., and C. SHERRATT, B.A. 3s. 6d.

Supplies a short account of the history and present government of the British Commonwealth of Nations including the territories added by the recent treaties.

Main Landmarks of European History. From 31 B.C. to modern times. By F. N. DIXON, B.A. *Second Edition.* 3s.

The object of the book is to trace in outline the successive steps of the process which has evolved the Europe of to-day from the Europe of 31 B.C.

Text-book of Geography. By G. C. FRY, M.Sc. *Fourth Edition, Revised to 1921 and Enlarged.* 6s. 6d.

Stress is laid on the interconnection of Physical Geography and Political Geography. The present issue indicates territorial changes due to the war.

EDUCATION.

Principles and Methods of Teaching. By JAMES WELTON, D.Lit., M.A., late Professor of Education in the University of Leeds. *Second Edition, Revised and Enlarged.* 8s. 6d.

In this work the treatment is theoretical in the sense of setting forth a consistent body of doctrine. But that the principles and methods here set forth are practical has been proved by the successful working of every one of them in school.

Teaching: Its Nature and Varieties. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. 6s. 6d.

An analysis of the processes of teaching as they occur in all subjects. The author examines the nature of the teaching itself, showing why certain methods should be employed.

Principles and Methods of Moral Training, with Special Reference to School Discipline. By JAMES WELTON, D.Lit., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. 5s.

This work treats of the general nature of good character—duty, virtue, conscience; of the school as a moral community in which good character is developed, &c.

Principles and Methods of Physical Education and Hygiene. By W. P. WELTON, B.Sc., Master of Method in the University of Leeds. With a Sketch of the History of Physical Education by JAMES WELTON, D.Lit., M.A. 6s. 6d.

Text-book of Hygiene for Teachers. By R. A. LYSTER, M.D., B.Sc., D.P.H., Medical Officer of Health for Hampshire and Chief Medical Officer to the Education Committee. 6s. 6d.
For Teachers in Training and for the Teachers' Certificate, Section M.

MATHEMATICS AND SCIENCE.

A First Course in Mathematics for Technical Students. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. *Second Edition.* 3s.

An easy course of Practical Mathematics, including Arithmetic, Mensuration, and Algebra, suitable for use in Evening Continuation Schools and Preliminary Technical Classes.

A Second Course in Mathematics for Technical Students. By the same Authors. 6s.

In this book the scheme of the authors' "First Course in Mathematics for Technical Students" has been extended to provide, in all, a three years' course in the subject.

General Elementary Science. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. *Fourth Edition.* 6s. KEY 2s. 3d. net.

Provides a simple and instructive course of Elementary Science, containing the rudiments of mechanics, physics, and chemistry.

Technical Electricity. By Professor H. T. DAVIDGE, B.Sc., and R. W. HUTCHINSON, M.Sc., A.M.I.E.E. *Third Edition.* 8s. 6d.

The object of this book is to give the reader a thorough acquaintance with the elements of Practical Electrical Engineering, and to base his knowledge on sound scientific principles.

A First Course in Engineering Science. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc. *Second Edition.* 4s.

Includes the elements of Applied Mechanics and Heat.

First Stage Heat Engines. By J. W. HAYWARD, M.Sc. 4s.

In addition to mentioning the usual demonstrations of the rules given, several experiments are suggested which can be carried out with home-made apparatus.

drawn to the ordinary and Honours Diplomas
for Teachers, which are strongly recommended as
suitable for those who are or intend to be teachers.
Examinations are held at Aberdeen, Bedford, Bel-
fast, Birmingham, Blackburn, Brighton, Bristol,
Cambridge, Cardiff, Croydon, Dublin, Edinburgh,
Exeter, Glasgow, Hull, Leeds, Liverpool, London,
Manchester, Middlesbrough, Newcastle-on-Tyne,
Norwich, Nottingham, Oxford, Plymouth, St.
Andrews, Sheffield, Southampton, and several other
towns.

Information regarding the Examinations may be
obtained from the SECRETARY, L.L.A. Scheme, The
University, St. Andrews.

Joint Agency for Women Teachers

OAKLEY HOUSE,

14, 16 & 18 BLOOMSBURY STREET, LONDON, W.C.1.

(Under the management of a Committee appointed by
the Education Guild, College of Preceptors, Head
Mistresses' Association, Association of Assistant
Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose
of enabling Teachers to find work WITHOUT
UNNECESSARY COST. All fees have therefore
been calculated on the LOWEST BASIS to cover
the working expenses.

No Registration Fees are charged to Members of
the above Associations, and their commissions are
reduced.

Hours for Interviews (During August)—
11.30 a.m. to 1 p.m., and 3 to 4 p.m.

Saturdays, 11.30 a.m. to 12.30 p.m.

When possible, special appointments should be
arranged.

Registrar—Miss ALICE M. FOUNTAIN.

The Association of University Women Teachers,

74 GREAT RUSSELL STREET, W.C.1 (3rd floor).
Recommends Teachers and Lecturers. Teachers,
with University qualifications, requiring posts in
Public or Private Schools, are invited to apply to the
Secretary—Miss B. BROUGH. Subscription 5s. per
annum. Tel.: Museum 3127.

THE
COLLEGE OF PRECEPTORS,
Incorporated by Royal Charter,
BLOOMSBURY SQUARE, LONDON, W.C.1.

A Course of twelve lectures on The
Teacher's Present Day Problems, by
Professor John Adams, will begin on
the 21st of September.

So many changes are at present
taking place in the theory, and par-
ticularly in the practice, of school
work that the self-respecting teacher
who does not wish to fall behind finds
it difficult to keep abreast of them
all. The course of lectures is in-
tended to enable those who are in
actual school practice to keep in
touch with all the new develop-
ments, so that they may be in a po-
sition to make an intelligent choice
among the many new plans and pro-
posals that are being put forward.
The lectures will deal with all classes
of schools, and will be copiously il-
lustrated by accounts of what is actually
being done in the more progressive
schools of to-day.

The syllabus will be ready for issue
in August.

SCHOOL COURSES ON FRENCH

PUBLISHED AT THE

University Tutorial Press.

Preliminary French Course. By H. J. CHAYTOR, M.A., late Head Master of Plymouth College, and H. E. TRUETOVE, B.A., Modern Language Master at Plymouth College. *Second Edition.* 2s. 6d.

A beginner's course leading up to the *New Junior French Course*. Contains grammar and translation from and into French, with provision for oral work.

Passages of French for "intensive" study have been introduced from the first, with English sentences for translation into French and questions and grammatical drill, all based on the said passages, which in their turn illustrate as far as practicable the portion of grammar assigned to the lesson. This book should meet the needs of the large number of teachers who try to combine the advantages of the Direct Method with the literary study of the language.

"Very full and well arranged, and appealing especially to those teachers of French who believe in a sane, judicious blending of the advantages of the Direct Method with the literary study of the language."—*Secondary School Journal*.

New Junior French Course. Containing Grammar, Parsing, and Composition. By G. A. ROBERTS, M.A., Head Master Russell Hill School, Purley. 4s.

This book is intended for use in the junior and middle forms of schools, and is suitable for candidates preparing for the Cambridge Junior Local Examination and other examinations of the same standard.

The Course is divided into a number of Lessons, each consisting of a passage of French to be translated into English; a portion of grammar to be learnt, with illustrations based upon the extract; an oral exercise upon the extract; a number of sentences for translation from English into French, testing the extent to which the student has mastered both the vocabulary and syntax of the reading extract and the rules contained in the lesson. The reading lesson is made the basis of the teaching throughout.

"The book becomes a serious rival to those existing. It will probably win easily."—*Schoolmaster*.

Direct French Course. By H. J. CHAYTOR, M.A., Fellow of St. Catharine's College, Cambridge, late Head Master of Plymouth College. With illustrations. 2s. 6d. With Vocabulary, French-English. 3s.

This book attempts, while preserving all the most approved features of the "reformed method," to combine therewith an amount of definite grammatical teaching, given in English. It has been found to be a most suitable book for beginners generally. The book is provided with pictures on which the subject-matter of the lesson is based. These pictures deal with various sides of French life—home, school, town, country, trade, sport, and war. A second copy of each picture is given at the end of the book, so that it may be used for conversation in class without the help of the text.

"Those who have not yet been convinced of the advantage of the Direct Method might be induced to change their opinions on the matter by a study of Mr. Chaytor's 'Direct French Course.'"—*Secondary Education*.

The Matriculation French Course. By Prof. WEEKLEY, M.A. *Fourth Edition, Enlarged.* 5s.

This book, though written primarily to meet the requirements of London University Matriculation Examination in French, is generally suitable as a school text-book, especially in classes preparing for the School Certificate (Senior Local) or Northern Matriculation Examination, for which the syllabus now coincides with that for the London Matriculation.

The book contains forty-eight lessons, representing four terms' work, and covering in broad outline the whole ground of elementary French grammar. The accidence is arranged in tabular form at the end of the book, and a portion of it is assigned to each lesson. Exercises and continuous passages for translation into French such as are now set at Matriculation are provided, and all necessary help in vocabulary and construction is given in an alphabetical lexicon.

"The rules are well expressed, the exercises appropriate, the matter accurate and well arranged."—*Guardian*.

Senior French Course. By ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham, and CLAUDE GILLI, B.A. 5s.

This book is intended for general use in schools, especially in those which prepare pupils for the Cambridge School Certificate (Senior Local) Examination. The bookwork is the same as that of the *Matriculation French Course*, but the exercises are entirely different and have been specially written with a view to the requirements of the School Certificate (Senior Local) Examination.

Continuous passages of varying difficulty for translation into French are provided. The majority of these represent substantially the standard of the passages set at this Examination, and many of them have actually been set.

"The exercises are particularly good, and as un-wooden as the most advanced teacher could desire."—*Journal of Assistant Masters' Association*.

Second Year Direct French Course. By G. A. ROBERTS, M.A., Head Master Russell Hill School, Purley, and H. J. CHAYTOR, M.A. Fellow of St. Catharine's College, Cambridge. With Vocabulary. 3s.

A Second Year's Course following on Mr. Chaytor's *Direct French Course*. It is based entirely on the Direct Method. The lessons consist of reading matter, explanations in French of the more difficult words, a varied selection of exercises, some material for free composition, and sentences for translation into French. The reading matter deals not only with French life, but with such things as central and local government, the army, education, &c., and is illustrated by views of well-known buildings in Paris and a few other scenes in French life. After going through this book, the learner ought to feel himself at home both in the French Capital and its speech.

"Well conceived as a whole, and carefully carried out."—*The Times*.

OCCASIONAL NOTES.

THE Superannuation Bill may quite possibly have reached the Statute Book before this issue of the *Journal* is published. Before the second reading was resumed negotiations between the Government and the National Union of Teachers were opened with a view to the possibility of some compromise being reached. This did not indeed happen, but the Union decided to withdraw active opposition when the Bill again came before the House, and the four Secondary Associations, which had been in touch with that organization, followed suit. All five, however, made it quite clear through their supporters in the House during the reading that their objections to the Bill remained unaltered. The feeling of the teachers has, throughout, been that the Bill, which is in no sense a contributory pension scheme, is of the nature of a special income tax levied on their salaries. This feeling, in the view of the secondary associations, is the less palatable in that it is not applicable to other public servants who also happen to have non-contributory pension schemes. After the second reading which was carried by a large majority, since the Labour Party was the only body which went into the opposition lobby, the Bill was considered by a standing committee, where various amendments were brought forward. The chief of these were intended to exclude from the operations of the Bill those teachers who do not receive the full benefits of the standard scales for elementary teachers or of the scales for secondary teachers, to ensure full compensation for those who under the Bill would be in a worse position than they would have been had they not previously withdrawn from non-Government pension schemes, and to safeguard the interests of certain classes of teachers particularly badly hit by its provisions.

WHEN the Superannuation Bill came up before Standing Committee B of the House, the first amendment moved was to substitute July 1st for April 1st as the date at which it should come into operation. This was opposed on behalf of the Government by Mr. Fisher, but the amendment was carried, the voting being 15 to 9. An unopposed amendment limiting the operation of the Bill to two years was passed by agreement. Mr. Fisher then moved an amendment that the contribution should not exceed the amount, if any, by which the salary of the teacher exceeded four-fifths of the salary upon which the Board was prepared to pay grant, *i.e.*, the standard Burnham Scales. Mr. Acland, on behalf of the Joint Committee of the four Secondary Associations, moved that "nine-tenths" be substituted for "four-fifths." During a very lengthy discussion it was made clear that the original fraction would have meant relief to elementary teachers, not receiving Burnham salaries, of no more than £20,000. As this sum would have been distributed among 14,675 of these elementary teachers, even setting upon one side a much larger proportion of secondary school teachers, the relief would have amounted to little more than a sovereign apiece, on an average, and it was vigorously opposed as utterly inadequate. Eventually, after a motion to adjourn put by Mr. Fisher had been defeated by 13 to 8, the "nine-tenths" amendment to his amendment was carried by 14 to 7, and proceedings terminated for that day, the Government having been defeated on three occasions.

NEXT morning, however, Mr. Fisher announced his decision to vote against his own amendment and, on a division, it was negatived by 12 votes to 10.

An amendment exempting from contribution all elementary teachers not receiving standard Burnham Scales was then put, but it was defeated by 18 votes to 10, and a similar amendment referring to the secondary Burnham Scales was, consequently, not moved. Other amendments, including two providing for the payment of 3 per cent compound interest on returnable contributions and for "contracting out" of the Bill under certain conditions, were defeated and, after Mr. Fisher had announced that provision had already been made under the Finance Act to exempt contributions from Income Tax, the Bill was duly reported to the House without further alteration. Amended to date back to June 1, and with the re-insertion of the "four-fifths" clause, it passed the third reading with little other alteration.

IT is very satisfactory that a way has been found of ending the unhappy dispute at Southampton. At one time it seemed as though the schools would be closed indefinitely. Feeling on both sides ran high, and in the end it was only the intervention of the Board of Education that led to a solution of the problem. As is usual in such cases, neither side obtained all it wanted. The Authority has indeed agreed to accept Scale III as the scale allocated to Southampton by the Burnham Committee, and while this may be claimed as a victory for the teachers, it is also a victory for good sense and a recognition of the morally binding force of a national agreement. But although Scale III becomes the recognized scale, the teachers have agreed to certain conces-

sions. Only the ordinary yearly increments are to be paid in 1922, 1923, and 1924, and the teachers will thus not reach their "proper point" until April, 1925. There is a further important proviso which is evidently intended to obviate another dispute when the scales come up for reconsideration in 1925. The Scale III to be adopted in that year is to be the scale agreed to by the Burnham Committee on or after that date. Thus the Southampton Authority has apparently pledged itself not to stand outside an extension of the national agreement, but to maintain Scale III for whatever further period may be decided by the Burnham Committee. Thus ends a dispute which has done grave harm to the cause of education in Southampton. It is to be hoped that all feelings of bitterness may now be allowed to subside, so that the damage may be repaired as quickly as may be.

THE Economy (Miscellaneous Provisions) Bill, in so far as it relates to education, will be regarded by Local Authorities as one-sided and reactionary. There

The Economy Bill.

may be excellent reasons for deferring the compulsory teaching of children until they reach the age of six, more particularly in rural districts, but to require local authorities to provide instruction for children between five and six, and to give parents the option of accepting it, will not make for either efficiency or economy. We are not advocates of unintelligent uniformity. If, however, some of the children begin their educational course a year later than others in the same school, it will assuredly complicate organization and classification. As the requirements of different areas vary so much, the sensible method would be to let the Local Education Authority determine, in each school district, whether the age of compulsory attendance shall be five or six. A still better alternative, in our opinion, would be half time for all infants. It may be hoped that the provisions enabling the Board of Education to limit any grants made by them to Local Education Authorities will be "temporary." The financial partnership has not been of long duration, and has not been a happy one. It is necessary, no doubt, under present conditions, to keep the dimensions of the educational garment within the limits of the available material, but the delay and irritation involved in the process, is, we understand, intolerable. As we have remarked on a previous occasion, it is essential for some system to be devised under which the State will bear an equitable proportion of what must be increasing expenditure without arresting necessary developments or vexatiously interfering with the discretion of local authorities.

THE plausible and ingenuous wording of this Circular of the Board was calculated, on a first reading, to allay suspicion and disarm criticism. The picture it sought to present to us was of a kind-hearted Board, discovering with pained surprise that they had been generously helping non-provided secondary schools, while all the time Local Authorities had been paying money to those same schools, and getting half of it back from the Board. This, they said, could really not go on any longer, and the conclusion seemed fair and reasonable. But on reflection one remembered that this scheme of aid had been in operation for many years, that it had been approved by Parliament, and that it was

merely a part of the machinery for giving support to schools which could not exist without it, and which were providing fully half of the Secondary Education in this country. It was seen that the result of the reduction in grant must be a corresponding reduction in efficiency or in numbers, unless the Local Authorities were prepared to make good out of the rates the money taken away by the State. And then, the whole inner meaning of the Circular became clear. It was simply another attempt to shift on to the shoulders of the local ratepayers a burden which had hitherto been borne by the taxes. That is the basis of a great many of the recommendations of the Geddes Committee, of which this was one. In this case, they put the saving to the Exchequer at half a million, so that is the sum which must be added to the local rates, if the schools are not to suffer. It is a characteristic example of Geddes "economy," and as such the Local Authorities have now detected and denounced it.

BUT Local Authorities will have none of it, and as the Board of Education declines to listen to protests or arguments, they are putting their case before

The Attitude of Local Authorities.

Members of Parliament in the shape of a Memorandum. Many of them have already declared that they can not increase their present contributions to these schools. It is the glaring inconsistency of the Board which is not the least ground of complaint. At one moment they deplore the insufficiency of the provision of secondary education as compared with America; at another, they advocate the increase of free places and scholarships; and then immediately afterwards, in an official Circular, issued without the authority of Parliament, they lay down a policy which will hinder and hamper half the secondary schools in the country, and inevitably result in the closing of some of them. The position of the Education Authorities is at present both anomalous and embarrassing. Anxious enough to reduce expenditure when it can be done wisely, they have, nevertheless, to watch every action of the Board, in order to resist "economies" which will merely shift the burden of payment, and "reductions" which will reduce nothing but efficiency.

THE Middlesex Education Committee is, apparently, suggesting that the Board of Education should modify its regulations which require that every grant-

Free Places in Secondary Schools.

earning secondary school shall admit, ordinarily, 25 per cent of its pupils as holders of free places. The proposal is the rather interesting one that the Board should withdraw the 25 per cent demand so far as *individual* schools are concerned. This would permit an authority to include more than 25 per cent of such pupils in some schools, but to accept less than that proportion in others. Bearing in mind the facts that the school life of free placers is often longer than that of fee-paying pupils and that, therefore, in many schools there are actually considerably more than 30 per cent of free placers, and that, on the other hand, the percentage in others would be considerably less, the proposition at least merits full consideration. Provided that the average percentage of free places in the secondary schools under a given authority was not lowered some such modification would possess one advantage. The districts from which different schools

draw their pupils vary considerably; in one the average financial position of the parents may be considerably better than in another. The school in the latter might well take more free placers, the former less, with no hardship resulting from such differentiation.

THE recent debate in the L.C.C. would have been more interesting if the decision had not been already made outside the Council Chamber. We agree with

Good Honours
Allowance
in London.

Major Gray that it is discreditable that an issue of this sort should be really decided at a party meeting; but the debate was useful if only because it

revealed the confusion that still exists on the nature of the Burnham Report. Half the argument against the retention of the good Honours allowances was based on the assumption that acceptance of the Burnham Report precludes an authority from going beyond the Burnham Scales, whereas the report expressly provides for cases in which an authority may have adopted a scale better than the Burnham Scale; most of the speakers on the same side assumed that the teachers had agreed to consider a lowering of the scales in 1925, whereas what the teachers agreed to was not to press for any improvement on the scales until 1925. As for the attempts to show that the agreement by which the teachers had been paid the good Honours allowance since 1920 was not binding upon the Council, although it would have been binding if it had satisfied Sir John Gilbert's definition of a bargain, only William Cobbett could do them justice. Miss Lawrence made a gallant attempt to persuade the Council to receive a deputation; Dr. Scott Lidgett moved the reference back of the recommendation, supported by Mr. Stewart Headlam; Mr. Pincombe moved to refer the whole matter to arbitration; and Mr. Gautrey and Mr. Ammon tried hard to get the L.C.C. at least to pay its own share; but whatever might be said inside, "that two-handed engine at the door," the Municipal Reform majority, "stood ready to smite"—and did smite; and one of the best things ever done by the L.C.C. for its best teachers has been swept away.

WE have Hospital Days and Lifeboat Days, Temperance Sundays and Citizens' Sundays, Baby Weeks and Health Weeks. One district of England

"Education
Weeks" and
their Value.

has an Education Week. How can such a week be best employed? Without considering too carefully the precedents already set, we would

suggest something of the following kind. There should, of course, be the ordinary speechmaking by local or national enthusiasts, with some opportunity for questions and three-minute speeches at the end of each conference. There should be demonstrations of pupils' work, practical (handicraft, needlecraft, &c.), musical, dramatic, and gymnastic. And here, too, there might be opportunities for questions and three-minute speeches; fond parents and well-meaning social workers dearly want to let off a little steam, whether in the form of grouching or that of praise. There should be the exhibition of apparatus (Montessorian and other) which we commonly find at educational conferences. But we suggest, in addition, a kind of apparatus hardly yet in existence. Wall-charts showing the developments of the sciences, arts, and ideas of man, from the earliest times to the present day, should be placed along walls and corridors;

and in particular there should be a wall-chart of *Education*, with portraits of great educationists near at hand. Again, there should be *celebrations* of Education, one, perhaps, devised for the man-in-the-street and one, more personal in its appeal, for teachers. Passages from Ruskin ("Tell me what you like, and I will tell you what you are," &c.), from Wells ("In a world lit and opened by education . . ."), and Chaucer's Clerk of Oxenford passage, with its exquisite ending, suggest themselves. There is, too, a fine song, "The Sower," by Nekrasof-Cui, the Russians. A celebration of Parenthood is also desirable, and one of The Child. The celebration idea is in the making; failing its full realization in the present, why should not *public specimen lessons* be a part of Education Week?

WE thoroughly approve of the recently issued appeal to English teachers of all grades for the adoption of a uniform grammatical terminology. Appeals of a

Uniform
Grammatical
Terminology.

like tenor have been issued from time to time by the Standing Committee on Grammatical Reform appointed by eight educational associations some

years before the war, but the present appeal comes with greatly enhanced authority. It is not merely signed by the presidents or chairmen of council of these associations; it is also the first step to render effective the recommendations of three recent educational commissions. When a reform is urged by three such representative bodies as those which have recently reported on Classics, Modern Languages, and English—commissions composed of men and women of widely different experience and outlook—it is obviously not to be dismissed as either impracticable or unimportant. Each of these commissions was confronted with the problem of securing sufficient time for its own subject within the inelastic limits of the school time-table; and each in turn was impressed by the waste of effort involved in our habit of teaching different languages with little reference to each other or to the grammar of the mother-tongue. It is one of the worst examples of the practice of keeping subjects in separate water-tight compartments, and losing the help they might give to each other. But that is not all. The unfortunate child has not merely to learn a new terminology with each new language; he has often to learn a new terminology in the same language, as he passes from one school to another, or even from one form to another in the same school. It is true that uniform terminology cannot be secured without some effort and some sacrifice of personal predilections; but the sacrifice is worth making in the interests of educational economy and efficiency.

THE stimulation of interest in local history and geography is now regarded as one of the functions of Education Committees. As the investigation develops, the instruction in this subject

Teaching of
Local History.

will undoubtedly grow in interest and value. Every parish and county has

its own individual history, of which generally it is proud; but such history is, as a rule, known only to a few. Local history is, in every instance, more or less associated with national history. It can therefore be assumed that a survey of local history will bring to light many items of information available to the complete history of the nation. Moreover, and this perhaps is of greater

value, the child's interest in its locality will be roused, its personal association with the past and present life of the nation recognized, and a sense of citizenship developed. The Kent Education Committee appear to be fully alive to the advantages of instruction in local history, for in this month's issue of their official gazette they have been fortunate to obtain from Prof. Allen Mawer an article on "The Survey of English Place Names." This article is one of several which have been published in their gazette on this subject. In this county the movement is to be further helped by the Kent Archaeological Society, who have agreed to co-operate with the survey and have appointed a committee to deal with the matter.

THE interesting and commendable experiment of adapting a private garden to the purposes of Education has for the past ten years been in operation at "Westfield," Reading, where Dr.

An Educational Garden.

J. B. Hurry has laid out a series of demonstration plots in which grow many varieties of plants used in industry and commerce. Tropical plants of economic importance may be seen in the adjacent conservatories. Every summer this garden is thrown open free to the general public, and more especially to teachers and school children, a printed and descriptive catalogue being supplied to visitors. There is also open to visitors a Museum of Economic Botany, in which can be studied the economic products derived from the plants growing in the demonstration plots and conservatories. Thus the plant is visualized in association with its products as used by man. The economic plants are arranged under four main headings: (i) medicinal plants; (ii) food plants; (iii) fibre plants; (iv) dye plants. In another part of the garden there is a series of economic trees, and a further interesting feature is an Old English herbary in which may be seen over sixty kinds of herbs and simples grown in this country during the Middle Ages, and frequently alluded to by such writers as Shakespeare, Chaucer, and Spenser. This novel scheme appears to have great possibilities of usefulness in the future, and Education Committees might well consider whether plots in school gardens could be utilized with advantage in the same way. The popularity of the garden at Reading indicates the great educational value of the scheme.

THE Report of the Committee of the Privy Council on Education in Scotland for 1921-22 is unusually barren. The keynote is struck on the opening page.

Report on Scottish Education.

"Education authorities," as one of H.M. Chief Inspectors remarks in his general report for 1921, "have had to ask themselves, not 'What can we do?' but 'What can we do without?'" For this reason, while progress has continued upon the old lines, we have few developments of note to report." In point of fact the signs of progress are as few as the developments. The most hopeful fact, indeed, is one for which neither Authorities nor Department have any responsibility. That is the continued increase in the number of pupils entering the Intermediate and Secondary schools. In the five years from 1913-14 onwards there was a rise of 23 per cent, as compared with 6½ per cent in the preceding five years. In 1919-20 the numbers rose 10 per cent; and in 1920-21, 14 per cent. This is so fine that it would be a huge pity if considerations of

a mean economy were to arrest this upward movement with all its great possibilities. Alongside the increase in secondary enrolments is a decrease in the number in attendance at the primary schools, the result of the war-time birth rate. The most interesting of the statistical tables given among the appendices to the Report is one showing the after career of the 88,776 pupils who left the primary schools during the year. Twenty-one per cent of these failed to pass the Qualifying Examination, and are presumably to be written down as the failures of the school system of Scotland. Of those who qualified, over two in twelve left without receiving so much as one year's supplementary instruction, less than six in twelve followed the supplementary course for upwards of a year, and over four in twelve proceeded to an Intermediate or Secondary school. Comparatively speaking, it is not a bad record, but it will need to be much better before the people of Scotland are as well educated as they ought to be. The school leaving age cannot be extended a day too soon.

THE question of the privileged position of Latin in the Arts Courses of our Universities has been freely discussed of late. It will be remembered that the Prime Minister's Committee on the position of Modern Languages in the educational system of Great Britain

Compulsory Latin.

recommended that "the study of Latin should not be backed by any kind of compulsion." The Report further states that compulsion in the study of Latin "drives students to uncongenial and unprofitable labour which is rarely carried beyond the worthless minimum of University requirement." Some little time ago the Senate of Queen's University, Belfast, decided to abolish compulsory Latin for Arts students at matriculation. It has now gone considerably further and removed all compulsion to present Latin throughout all the various stages of the Pass B.A. degree. The matter is one of great interest at present, because from the Modern Sides of our secondary schools there are students matriculating in large numbers who have passed in English and French, though up to the age of 16 or 17 they have done no Latin. Many of these students would like to read for an Arts degree in English, Modern History, or Modern Languages, but at present the Arts Faculties of our Universities are closed to them unless they are prepared to submit themselves to an intensive course of Latin, so that they may pass in that subject at matriculation and intermediate standards. Many of these students are unwilling to do so, and they either abandon all hope of a University degree or turn from the Arts Faculties to the Science or Commerce Faculties of the Universities. It will be interesting to note whether the action of the Senate of Queen's University, Belfast, will be followed by other University authorities.

IN April, 1921, an Adult Education Committee was set up to promote the development of liberal education for adults and to bring together national organizations concerned with the provision of adult education, with the view of securing co-operation between existing bodies and the establishment of local voluntary organizations that would co-operate with the Local Education Authorities. This Committee has now issued two reports. The first (Paper No. 1,

Report on Adult Education.

4d.) deals with local co-operation between universities, Local Education Authorities, and voluntary bodies. It is a brief but clear survey of existing methods of co-operation and will prove of value to all those who wish to get, rapidly, some idea of the position and of the problems to be solved. The Committee reports that an increased measure of co-operation between all the parties concerned is vital to the full development of adult education, and that they approve of financial aid being given through the Local Education Authority rather than by direct grants. While they approve of the recommendation of the 1919 Report that Adult Education Joint Committees should be set up to operate over wide areas, they doubt the wisdom of applying such a form of organization to small areas. Perhaps one of the most valuable suggestions made, is the formation of Consultative Committees to discuss methods of co-operation between voluntary bodies, to advise the Local Education Authority, and to bring to the notice of voluntary bodies the facilities which the Authority is prepared to offer. Such Consultative Committees could be set up at once to survey areas which might, in some cases, be larger than those of any one Local Education Authority. Some of their recommendations could, possibly, be carried out without interfering with any existing arrangements and without involving additional expenditure. Their work might very easily prevent any present overlapping and consequent waste and prepare the way for a wide extension of adult education when times are more favourable.

THE second report (Paper No. 2, 6d. net) deals with the recruitment, training, and remuneration of tutors. All those with any experience of classes for

Teachers for
Adult
Education.

adults will endorse the remark that the success of such classes depends to a considerable extent upon the willingness and ability of the tutors to throw themselves into the pioneer work of educational propaganda and to act as missionaries of education. As most of the tutors only take occasional classes their income is of a very precarious nature; this undoubtedly prevents many excellent teachers from undertaking the work. It is felt, however, that if there were a sufficiently large number of well-paid staff posts, there would be many who would be willing to give full-time service. All full-time teachers should be paid during periods of sickness, and all travelling and other expenses should be paid in addition. It is believed that if the Universities would bring to the notice of their students the opportunities afforded for social service by this kind of work there would be no difficulty in securing an adequate number of both part-time and full-time recruits. This propaganda should be accompanied by training courses so devised as to fit the recruits for the special difficulties connected with classes for adults. Such are some of the general recommendations of the Committee. They also make certain special suggestions with regard to University Tutorial Classes, University Extension Courses, and One-Year Classes. The Report contains a number of interesting statistical tables showing numbers of classes in various years, numbers and remuneration and length of service of tutors. From these it will be seen that if the number of tutors is small and their years of service not particularly numerous, their remuneration has not erred on the side of generosity.

TO many a schoolmaster the alleged duty of inculcating patriotism undoubtedly causes much searching of heart, because patriotism only too easily merges into jingoism. From an article in *The Patriotism. Nation* (American issue) we gather that "Americanism," the equivalent in the United States of jingoism, is becoming a real educational menace. An incompetent actor who plays on a patriotic theme and waves the national flag may make a triumphant exit, whereas a teacher who states that Wagner was a respectable composer runs the risk of losing his job. In this country we may be said to have passed through that stage, but we are not out of danger by any means. What we all need to realize is that, as the writer of the article says, patriotism, like family love, needs no inculcation. It needs only direction. In other words, it is ignorant and uneducated patriotism that constitutes the real danger. The teacher has to find a mean between jingoism and a misty cosmopolitanism which takes no account of some of the most obvious facts of human nature. It is true that patriotism is not the only virtue that may become "the last refuge of the scoundrel," but the latest proof that it is one of them has recently been given in the Law Courts. On the other hand, love of country is a fact not only to be reckoned with, but also to be rejoiced in. In order that it may play its right part in individual development, we need, and apparently America especially needs, "not more flag-waving, but more tolerance and more knowledge."

EDUCATION WEEK AT WEST HAM.

WEST HAM'S Education Week will go down in the annals of the Borough as its Wonderful Week. The six months' preparatory work of a great army of helpers, in which the teaching profession naturally provided the largest battalions, has been crowned with success. There has been a stirring of the waters; the general interest and imagination in all forms of educational work has been so quickened, that when the next chance of advance comes, it will be welcomed, at any rate in West Ham, by a keen and enlightened public opinion.

The week began on a Sunday and finished on a Sunday, for as the Education Week Handbook says, "Jesus Christ was once a little child. He was also a teacher who taught with authority. Education Week therefore makes its appeal to all who bear His name and profess His Faith." Two official services were arranged at which the Mayor and members of the Corporation and Education Committee were present.

The inaugural service was held at the Old Parish Church, and the closing service at the Plaistow Congregational Church where John Curwen, the founder of the Tonic Sol-fa System, ministered for twenty-three years. At this service a most inspiring sermon was given by the High Master of Manchester Grammar School. Other preachers included Mr. E. J. Sainsbury, Vice-Chairman of the N.U.T., Professor John Adams, and Mr. Ernest Barker, Principal of King's College.

Enthusiastic mass meetings were held, one at the beginning of the week, in the north of the Borough at Stratford, and another at the end of the week in the South. The first was addressed by Mr. F. J. Leslie (Hon. Secretary, Association of Education Committees) and Miss Margaret Bondfield; the second by the Rev. Stewart Headlam, Mr. Paton, and Mr. Mactavish (General Secretary, W.E.A.). Twice during the week the Borough Theatre was packed from floor to ceiling with parents who had come to see

the history of West Ham illustrated in Animated Tableaux by over one thousand children. Demonstrations illustrating the teaching of English by the Dramatic Method were given at various times in different parts of the Borough and in every case the Halls overflowed with interested parents. Two Open-Air Concerts were given by a choir of three thousand children and an Evening Concert by a choir of three hundred at which Demonstrations in Sight Singing were given.

Throughout the whole week, Exhibitions of School Work from every type of school were on view in the Town Hall, Stratford, and in the Public Hall, Canning Town. The Municipal College was thrown open, and an Exhibition devoted to the History, Industry, Literature and Art of West Ham was held at the Red Triangle Club, Plaistow. Special exhibits were also on view at the Museum. Athletic Festivals and Swimming Demonstrations also formed an important part of the week's festivities.

It should be noted that the competitive element was rigidly excluded as the exhibits bore neither the name of the pupil nor the name of the school, and that the necessary financial support was voluntarily provided.

In the Handbook which was prepared as a guide, as a stimulus to thought in Educational matters, as a programme and a souvenir of the week and Festival, and as an illustration of work that West Ham is doing in literature, art and craftsmanship, the names of the workers and contributors are conspicuous only by their absence. Not even the author of the poem, selected by Quiller-Couch as the best sent in by West Ham poets, is known.

Perhaps the feature of the week, which will produce the most permanent effect, was the series of open days and evening meetings organized in nearly every one of the departments of the Council's Schools. The parents came in crowds and were obviously delighted to see their children at work and at play, and they eagerly availed themselves of the opportunity provided for talks with the teachers.

The Week came as a revelation to many; again and again one heard the remark, "I had no idea that such great and varied work was going on." Even some whose educational horizon is bounded by the vision of "Rates" were constrained to admit that the Borough was getting value for its expenditure on Education.

One other striking feature of the festival is that it has developed and stimulated the sense of common citizenship in the Borough. It has made the burgesses of West Ham realize that they are citizens of no mean city. Men of all parties, of all creeds, teachers from all types of school worked together quietly, unselfishly and enthusiastically for the one object—the Spiritual, Intellectual and Physical well-being of **THE CHILD**.

FREDERICK WILLIAM SANDERSON.

THE tragically sudden death of the Head Master of Oundle on June 15 has removed from the educational world one of its greatest head masters.

Sanderson went to Oundle with a singularly wide experience. His life at Durham gave him an insight into the working of one of the northern Universities. Here his views in theological questions crystallized into a clear faith, and this experience and training proved a valuable preparation for his undergraduate career at Cambridge. After graduating at Cambridge as 11th wrangler he was for some years science master at Dulwich before being appointed Head Master of Oundle in 1892. He had thus taken University courses in both Theology and Mathematics, in widely differing atmospheres, and had some years' valuable experience in the teaching of a third subject, Natural Science, in a third environment. The variety of this apprenticeship resulted in a remarkable breadth of mind and a conspicuous humility—two of his leading characteristics.

When he arrived at Oundle he found a school of some 60 or 70 boys, and he at once started to build up that great public school of to-day which will be a memorial to him for all time. The creation of one of the greatest of public schools is in itself a magnificent life's work, and in this respect Sanderson ranks equally with Thring and Arnold, thus completing the trinity of outstanding modern public-school head masters. In one respect, however, his achievement was more remarkable than that of either of the other two. Not only did he create a school but he created a new spirit and a new method.

He was the first educationist to realize that boys loved doing things but hated learning things. He therefore deliberately sought every opportunity of affording the boys facilities for manual work. The wonderful science laboratories, engineering shops, botanical gardens, experimental plots, woodwork shops, and so on, are unsurpassed by any school in the country.

He soon discovered, as he had prophesied, that after boys had begun to do things they soon wanted to learn in order to be able to do more, and thus for the first time in the history of education in England, a school existed where boys were only too anxious to learn and to understand so that they might be able to solve their own problems and be in a position to tackle new ones. In fact by taking boys up to the top of Mount Pisgah and giving them a glimpse of the glories beyond, he found that they were willing to go back and do their forty years in the wilderness. This method he applied to the humanities as well as to the sciences. The principle of co-operative work is one of the many remarkable features of the Oundle system. In English, in History, in Geography, in Political Science and Economy, we see groups of boys striving with each other to reach a common end, instead of individual boys striving against each other for selfish motives.

The spirit and service of Science were exemplified in every subject in the curriculum; knowledge was sought for at Oundle as at no other Public School, and although Sanderson lived to see his seed develop into a wonderful plant, the fruits of his labours are for us to gather.

WIRELESS TELEGRAPHY IN RELATION TO GENERAL SCIENTIFIC WORK IN SCHOOLS.

BY P. BOLTON, OUNDLE SCHOOL.

THE part that experimental work in Wireless Telegraphy should play in the general scientific work of schools requires careful consideration. An interchange of ideas between those interested in this aspect of the matter would doubtless prove of value, especially in view of the widespread interest attracted by the probable development of "broadcasting."

For some years past, but more especially since the war, we have found a large number of boys keenly interested in wireless work. The development of the thermionic valve and with it the introduction of comparatively inexpensive receiving sets have stimulated this interest. At the same time the experimental difficulties of securing satisfactory results—at any rate, as regards reception—have been so reduced that there may be some risk of a corresponding falling off in the appeal to real scientific interest.

At Oundle we have had this possibility in mind and have tried to avoid the pitfalls of what, for want of a better term, may be called "amateurism." Nevertheless we must realize that many boys whose interests are at first restricted in this way, may be attracted to a more serious study of the science, and no avenue to such development should be closed for want of a little sympathetic consideration of the boy-amateur's efforts.

The work here is largely in the hands of members of the School Science Society, and little formal teaching of the

subject has been attempted. There has always been a steady flow of boys who have acquired, from their general scientific work in the school, sufficient knowledge and experience to enable them to appreciate the literature of the subject and to carry out experiments with a reasonable degree of success. In conformity with the established practice in this school, a considerable measure of freedom has been allowed in the use of the apparatus, and the boys have had the fullest opportunities of trying out the ideas which they have acquired from their own observation or reading. This privilege has never been abused and has been invaluable in preventing any tendency to regard the apparatus as a box of mysteries capable of certain effects after a few adjustments whose purpose is ill understood, or, worse, has not been considered at all.

Opportunities are taken to interest the school by means of lectures given usually by the boys themselves in the winter terms. These may take the form of a general description of the principles involved or of some more specialized subject, such as the properties of thermionic valves. They are usually illustrated by experiments and will enlist the services of several assistants. Among recent lectures of this kind, I find in the *Journal of the School Science Society* talks on "The Principles of Wireless Telegraphy," "Electric Discharge through Gases," "The Development of Wireless Telephony."

At least once a year, usually on Speech Day, a Scientific *Conversazione* is given. This is of a general nature, but includes many experiments on the phenomena of Wireless Telegraphy and Telephony. It is meant to illustrate both the History or the Romance of Science and some of the results of the most recent researches. Many experiments shown for example at the annual *Conversazione* of the Royal Society have been repeated. For this purpose the boys are set entirely free from ordinary work for a week or more, and devote themselves to some special piece of experimental work. They work in small groups preparing their experiments and reading the original authorities or standard text-books. At the *Conversazione* they are expected to give an account of their work to their fellows and the visitors. In this way some sixty or seventy boys may be engaged in the Physics and Engineering laboratories alone, and many of these are drawn to experiments, either directly or indirectly, concerned with the phenomena of electro-magnetic radiation. Thus the programme of 1921 included a repetition of Hertz's original experiments, Lodge's Resonant Jars, the working of the Coherer, Duddell's Singing Arc, Spark sets with crystal detector, Continuous Wave Telegraphy and Telephony, Mechanical Analogues of Coupled Circuits such as that devised by Professor Barton and shown by him to the Royal Society, Three Electrode Valve giving oscillations of musical frequency—again copied from the *Conversazione* of the Royal Society. This year it was intended to illustrate more completely the progress of wireless work. The value of such work impresses us more with each repetition, and certainly it leads to a fuller appreciation and understanding by those boys who are directly interested in Wireless Telegraphy, besides inspiring a fresh stream of enthusiasts in that and other directions.

In the Physical Laboratories every facility is provided for the study of special points arising out of the work such as valve characteristics or for the measurement of the various constants of the apparatus—capacity, resistance of grid leaks, and the like. The workshops are available in the boys' own time for the making of apparatus for sets for home use, and a number of boys are usually to be found in the winter terms taking advantage of these opportunities.

In regard to equipment the guiding principle is that the school should have available for the boys the best apparatus reasonably possible. For some years excellent service was given by two spark sets with crystal detectors made by The British Wireless Telegraphy Company. These are still extremely useful as affording the simplest

illustration of the fundamental principles governing the oscillations in an aerial circuit.

Since the war we have acquired two Mark III* Trench sets in which the principle of heterodyne reception is employed. With the aid of a three valve amplifier and a Brown's loud speaking telephone a large number of boys can listen at the same time. With this apparatus all the concerts given by the Marconi Company some time ago and the more recent ones from Holland have been successfully received and have usually attracted an appreciative audience.

In order to give practice in manipulation, the opportunity is taken by boys told off in turn from suitable classes to take the Eiffel Tower time signal and note the errors of the school standard clock. To facilitate operations of this kind it has been found convenient to fit up a large cupboard in one of the laboratories for the accommodation of the sets. The high and low tension batteries are contained in a separate lower division of the cupboard, and are wired up to suitable plugs. The rest of the equipment is conveniently disposed so that all adjustments can be made without removing the apparatus. In this way regular practice can be obtained without excessive expenditure of time in collecting apparatus together, even where it is impossible to devote a separate room to Wireless apparatus.

Similar Mark III Trench sets have been issued to the signalling section of the Officers' Training Corps where regular practice is carried out in the use of the Morse code. It has therefore been found unnecessary to provide any other means of teaching the code.

As time went on it was inevitable that interest should shift towards the problem of transmission of Telephony. A small booster set was made up by coupling two small direct current machines. In this way a 300-volt supply was obtained. One of the transmitting sets was modified for telephony and after some trials fairly satisfactory results were obtained.

Last year a youthful enthusiast conceived the idea of transmitting a rendering of the Messiah which was being given by the boys with the whole school taking part in some of the choruses. This brought us face to face with many difficulties, and eventually a new transmitting set for the transmission of higher power was obtained from Messrs. Burndept. A generator designed to give one thousand volts was installed in a small room which has now been appropriated as a transmitting station. In this instance the attempt can hardly be regarded as completely successful, though reports of satisfactory results were received from stations as far north as Aberdeen. It is hoped to renew the experiment later on, when greater attention will be paid to the selection of a suitable microphone and to the solution of other difficulties which were encountered.

Other apparatus includes a long wave receiving set and a high frequency amplifier, both made in the school. There are also wave-meters and amplifiers and a recent gift of a Marconi Magnetic Detector from the Wilkinson Engineering Company.

There are two separate aerials arranged at right angles so that eventually we can make and experiment with apparatus for directional work.

From what has already been done, we see our way towards many other problems which afford ample scope for the work of the immediate future and, provided that the measures outlined above remain as successful as they have been to the present, there seems little need to fear any diversion of interest from the more scientific aspects of Wireless work.

MR. H. J. WARING, who has succeeded Sir Sydney Russell Wells as Vice-Chancellor of the University of London, is Vice-President and Lecturer in surgery at St. Bartholomew's Hospital Medical College, a member of the Council of the Royal College of Surgeons, and a member and treasurer of the General Medical Council.

CIVICS, WITH SPECIAL REFERENCE TO GIRLS,
CHILD WELFARE, AND MATERNITY.

By E. M. WHITE.

THE scope of modern Civics extends very widely, and links together many subjects, drawing them out of the classroom into the home, the street, the workplace, and every sphere of daily life. All young people should be guided in the study, theoretical and practical, of citizenship in such a way that permanent interest is aroused and developed into a desire for active participation in the progress of some section of reform. The guidance would involve inculcation of knowledge, and this would include sketches of the history of great citizens throughout the ages, of the development of family life, villages, towns, and cities, and their significance to civilization, the history of the pupils' own district, accounts of industries, the growth of education, local and central government, the story of the British Commonwealth, and some touch with current events. Wisely and widely directed, this study leads to enhanced interest in conditions here and now, so that an intelligent grasp of present problems, events, and politics is obtained, together with the wish for further improvements.

For too long Civics has been regarded as limited to rates and votes and dull details of administration. The broad historical aspect must always be taken, and special reference be given to minor issues in subordination to the great whole of civilization, with nearly all of which is the citizen, as such, deeply concerned. Though a modern Civics syllabus should always follow the same general plan outlined above, yet details and items can be selected with a view to special needs. With girls personalities should be emphasized rather than mechanisms of administration, which interest boys more strongly. More appeals to feeling, in an indirect way, and visions of the future rising from present-day facts, are also specially suitable for girls, but it cannot be urged too strongly that nothing must be mere sentiment; all must be based on fact and history, for experience, and not theory, is the guide in Civics.

When dealing with the lives of citizens, and their work and inspiring influence, those chosen must be both men and women: Pericles as the beautifier of the city, Joan of Arc as the inspirer of patriotism, Edwin Chadwick and his passion for sanitation, Elizabeth Fry as a reliever of suffering, Margaret McMillan and her care for children, are a few examples, but it is best for each teacher to make her own selection according to her own interests. The points to be emphasized in these accounts are:

- (a) Ways in which the person dealt with served the community,
- (b) How this was done in addition to the citizen's ordinary occupation,
- (c) Any parallels or connexions with the present,
- (d) The variety of openings for citizens of all grades of capacity to give service.

Villages in earlier and later times have much in their history of special interest to girls: details of home life can be noted as well as outside work, the tilling of the ground by women in early times, the making of the home by women, the making of clothes and the preparation of food in the middle ages, the work of Women's Institutes* at the present day, and their influence in widening and brightening the lives of cottage women, the need for more social life in villages, other improvements desirable, such as better sanitation and more comfortable cottages. Village industries are increasing, and women are mainly concerned in the carrying on of these.

With towns a similar procedure can be followed, and in addition the work and influence of medieval guilds, for women as well as men, can be taken. Towns and cities

of the present and the future offer many problems to, and much scope for, the work of women, who should be specially interested in the following sections of the subject: housing improvements (bath rooms, day nurseries, cupboards, electricity), ideal homes, communal kitchens, municipal washhouses, improved sanitation, town planning, open spaces and playgrounds for children, beauty in buildings, facilities for recreation and culture. Accounts of such places as Letchworth, with its attempts at communal housekeeping, &c., and descriptions of its houses and factories, would instil a desire for similar advantages in the pupils' own district. If possible, a visit should be paid to any model village or garden city or suburb near.

In all cases throughout a Civics course the teaching should be as concrete as possible, with pictures, maps, charts, and other illustrations (some of which can be supplied by the pupils), and with constant reference to any points that touch the pupils' own lives. Pupils themselves should be encouraged to bring cuttings from newspapers, &c., and illustrations of all kinds in connexion with any points in their lessons, and these can be pasted in their note-books. It has been found by the writer that this plan much enhances the interest, and in a very practical manner intimately connects study and outer life. In some cases the habit will be continued after schooldays, and in all cases the value of such illustrated note-books is much increased.

A great deal of particular moment to girls and mothers is included in the next section—local government—especially when dealing with the present activities of local authorities. Many of these activities have child welfare as their object. The education committee and the medical officer for health are two of the main channels serving the children, and some account can be given of the school system of the district, of doctors' and nurses' visits, the work of the school clinic, of care committees, labour exchanges, &c. A hint may be given that women of quite ordinary capacity can serve in many directions in connexion with local authorities, but it is never wise to press the duty of such service; interest and innate goodwill are sufficient to inspire the wish, and the Civics lessons give the knowledge that will direct efforts. What advantage the local authority has taken of such laws as the Feeding of School Children Act, or the Fisher Act of 1918, should be referred to, and any omissions on the part of the City Fathers and Mothers named. Various voluntary societies and their work might be taken at this stage, such as the National Society for the Prevention of Cruelty to Children, the Children's Fresh Air Fund for London, the National League for Health, Maternity, and Child Welfare†, and other such efforts for the amelioration of child life. Special mention can be made of National Baby Week, held in the first week of July, and following the lines of the Baby-Week Campaigns in the United States. If the municipality wherein the pupils live is arranging for an exhibition and lectures in connection with Baby Week, the girls may visit the exhibits and hear the simpler lectures. The Civics teacher can enumerate the ways in which good health and sensible upbringing react on community life and institutions, and can direct her pupils in discovering the differences that would be made in social life, institutions, and rates if preventable disease and weakness were stopped.

In addition to general knowledge of the State, girls can have more details of such aspects of national life as deal directly with what appeals to the maternal instinct. When the historical foundation of this section of the subject has been laid, and present-day conditions are being discussed, some mention can be made of questions like those of mothers working outside the home, the endowment of motherhood, rights of parents over their children, a family wage, maintenance of school children, and other such topics. Factory laws restricting the work of women and children,

* Particulars can be obtained from The Federation of Women's Institutes, 72 Victoria Street, S.W. 1.

† Information can be obtained from The Secretary, 117 Piccadilly, London, W. 1, or from the local centre.

the Representation of the People Act of 1918, women magistrates and women on juries, are additional items of interest to girls, and ultimately relevant to child welfare.

Other subjects can also be brought to the aid of Civics, especially that of Hygiene in its widest sense. Laws of sanitation, prevention of disease, purity of food, milk supply, &c., and the lives of such citizens as Pasteur, Sir Ronald Ross, &c., are of civic consequence. It will be a pleasant exercise for a teacher imbued with the civic spirit to extract from any subject sections that specially concern the citizen as such, and this can be applied particularly to the sphere of girls, maternity, and child welfare.

In a general sense the future mother needs to know all about the environment of her child and its probable influence, all about the educational possibilities, and the future occupation. She needs to study Civics according to the formula used by Prof. Patrick Geddes—Place, Work, People—and the teacher can best help her by disclosing to her how these three aspects of her district affect her daily life, and then connecting them with the larger life of the country, and finally of the world. To take merely two items in this wider view: emigration as a means of providing homes, and the League of Nations as a means of averting war, are of high import to maternity as such. In fact, from one point of view all Civics study is of value to the maternal spirit, for the general culture and sense of the world that the subject produces in its students are assets to motherhood in that they induce a greater respect in children for the mothers, who, unconsciously perhaps, but inevitably, widen the thoughts and interests in the home through their attitude and knowledge.

For all citizens Civics is now a subject of practical importance, as since the war there has been an increase of the concern felt about outer affairs, current events, and present problems. All are implicated in the reorganization of the world, a process carried on by women as well as by men. In the study of Civics, however, there should be no trace of any divergence or antagonism between the sexes; the good of the community is served by each, the efforts of neither can be dispensed with. The study should give the necessary foundation of knowledge and arouse the interest which lead to the sense of devotion that characterizes the complete citizen, whether man or woman.

PERSONAL PARAGRAPHS.

SIR SYDNEY RUSSELL WELLS was elected Vice-Chancellor of London University in November, 1919, and he has passed through an eventful and important period of office, characterized by broad-minded action and impartial balancing of the interests of all branches of University work. He has fought unceasingly for the University as a whole, and the dignity of the University has been firmly upheld by his stricter observance of ceremony. A supporter of the view that any branch of intellectual activity which is important in the life of the community affords good ground for University training, he has been mainly responsible for the institution of degrees in Commerce and in Estate Management. As a prospective Unionist candidate for the parliamentary representation of the University he is being supported by the Teachers' University Election Association.

LONDON teachers in particular will feel a deep personal loss in the retirement of Professor John Adams from the Principalship of the London Day Training College. Prof. Adams is a native of Glasgow and he had an extensive career in Scotland before coming south. In reporting, with regret, his retirement the London County Council Education Committee say: "Professor Adams came from the University of Glasgow in September, 1902, to fill the chair of education in the newly-organized teaching University of London and to be the first Principal of the Coun-

cil's University training college. Under his headship the London Day Training College has attained the dignity of a school of the University, has become the recognized centre of pedagogical activities in London, and has gained a widespread reputation throughout the country and abroad. In addition to the students who have taken the regular course of training at the college, many of whom have already reached distinguished positions in the educational world, thousands of London teachers of all grades have been attracted to Professor Adams' lecture room and have carried his influence into the schools; while his writings and public addresses have done much to enlighten general opinion upon educational matters. He retires the recognized doyen of his branch of the teaching profession, after a career in which his experience, ability, and learning have been of conspicuous service to the cause of education."

THE promotion of Professor T. P. Nunn to succeed Professor Adams as Principal of the London Day Training College, in accordance with the unanimous recommendation of the College Council, will receive the unqualified support of all branches of the teaching profession. Dr. Nunn is a graduate of London University, having taken the degrees of B.Sc. (Honours), B.A., M.A., Teacher's Diploma, and D.Sc. He has had thirteen years' experience in secondary schools, two years in L.C.C. technical institutes, and three years in evening classes for working men. He has been Vice-Principal of the Day Training College since 1905, and Professor of Education (University of London) since 1913. He was president of the Training College Association (1914-15), president of the Mathematical Association (1917-18), first chairman of the education section of the British Psychological Society, 1919-21, and he has written a number of books and made many contributions to learned societies.

OLD BOYS of Christ's Hospital will feel deeply the death of the Ven. Arthur U. Upcott, Archdeacon of Hastings, who was head master at the school from 1902 to 1919. A native of Devon, Dr. Upcott was educated at Sherborne school and Exeter College, Oxford. His earlier teaching experience was gained at St. Mark's, Windsor, and Westminster School under the renowned Dr. Rutherford. He became Head Master at St. Mark's in 1886 and in 1891 he accepted the headship of the Clergy Orphan School, Canterbury. His great school work began, however, in 1902 when the Governors of Christ's Hospital selected him as successor to the Rev. Richard Lee, and on him rested the main responsibility of organizing and establishing the school in its new home at Horsham. During his tenure of seventeen years the educational scope of the school was widely extended, chiefly in the variety of courses available for boys in the top forms.

THE passing of Miss Ethel E. Houliston has deprived the Girls' County Intermediate School at Abergavenny of a most able and devoted head mistress, and the cause of education in South Wales and Monmouthshire of a keen and ardent supporter. Miss Houliston was educated at the Bedford High School and Newnham College, Cambridge. She was placed in the second class of the Historical Tripos of 1890, and subsequently took her M.A. degree at Trinity College, Dublin. After some years teaching at the Hull High School and the Wakefield Girls' Grammar School, she was chosen in 1897 out of a strong field of candidates as head mistress of the new Girls' School at Abergavenny, and here her real life's work was done. From the very first there was no doubt that the right appointment had been made. Miss Houliston's energy, power of organization, and enthusiasm ensured the immediate success of the school. High honours and scholarships fell time after time to her pupils in the Central Welsh Board Examinations, and many of them proceeded to the Welsh University Colleges at Cardiff, Aberystwyth, and Bangor. A considerable number

of the girls entered the teaching profession and Miss Houlston felt and at the same time rejoiced in, the great responsibility involved in their training. She strove with success to maintain a high standard of school morality and the religious side of education was very real to her. While she personally held strong Church views, tempered by common sense, she was extremely careful never to allow them to bias her teaching, but at the same time her religious instruction was very real and conscientious. She was a strict disciplinarian, but knew when she might relax, and her relations with her staff, and with her girls, were most affectionate. They looked up to her, admired her, and loved her. Most conscientious herself in all matters connected with the school, she looked for the same quality in others, and hundreds of her old girls will gratefully acknowledge how much they owe to her personal example and her influence.

* * *

MR. E. REYNOLDS, the newly-appointed Head Master of the Watford Grammar School, was educated at Oakham School. He went up to Cambridge with an Open Mathematical Exhibition in 1894 and graduated 1st Senior Optime in the Maths Tripos, 1897. After holding appointments at the Cathedral School, Ely, and Worcester Royal Grammar School, he became Head Master of Northampton School in 1907. A great believer in school games, Mr. Reynolds has often captained the Northants Club and Ground elevens. Many of his old scholars have secured county caps, and several have obtained their Blues at Oxford and Cambridge. Mr. Reynolds was a member of the Departmental Committee which reported in 1918 on "Salaries in Secondary Schools and Institutions for Higher Education." He resigned from Northampton in 1921 and was appointed on the Secondary School Inspectorate under the Board of Education.

* * *

DR. J. W. McLEOD, O.B.E., who has been appointed the first occupant of "The Sir Edward Brotherton Chair of Bacteriology" of the University of Leeds, was educated at George Watson's College, Edinburgh, College Cantonal, Lausanne, and Mill Hill School. He graduated M.B., Ch.B., with commendation, at Glasgow University in the summer of 1908. After acting as House Physician at the Glasgow Royal Infirmary and house surgeon at the Glasgow Western Infirmary, he gained the Coats Research Scholarship and worked for a year under Professor Muir, F.R.S. In the following year he was awarded the John Reid Prize for the best piece of research work on a medical subject at Glasgow University, and later he was elected to a Carnegie Research Scholarship. He joined the R.A.M.C. in 1914, and in the following year took charge of a mobile bacteriological laboratory in France. In 1919 Dr. McLeod was appointed to the post of Lecturer in Bacteriology at the University of Leeds, and has continued to hold that post until the present time.

* * *

By the sudden death of Dr. W. H. R. Rivers, University circles have suffered a great public and personal loss. A pioneer in the study of anthropology, his breadth of sympathy was particularly valuable in extending the appeal of this new science to men of all types of view. Born in 1864, he was educated at Tonbridge and St. Bartholomew's Hospital. He was a Fellow and Praelector in Natural Sciences, St. John's College, Cambridge, and President of the Royal Anthropological Institute and Folk-lore Society. During the war he served as captain, R.A.M.C., and among other appointments held that of psychologist to the Central Hospital, Royal Air Force. He was also president of the Section of Anthropology, British Association, 1911, and was awarded the Royal Society's Royal Medal in 1915.

ONLOOKER.

CORRESPONDENCE.

THE SHELLEY CENTENARY MEMORIAL AT WARNHAM. *To the Editors of The Journal of Education and School World.*

SIRS,—The Centenary of Percy Bysshe Shelley's death fell on July 8, 1922. The time is therefore ripe for putting into execution the belated designs for commemorating the Centenary of the poet's birth which we initiated in 1892. We then organized the celebration at Horsham (August 4, 1892), which had for its ultimate object the establishment of a Shelley Library and Museum in that town. The appeal, asking for support in realizing this design, was signed by many representative leaders of the English speaking peoples. Among the signatories appeared the names of Lord Tennyson, George Meredith, Alfred Austin, Andrew Lang, W. M. Rossetti, Onslow Ford, William Watson, William Morris, Thomas Hardy, Walter Crane, H. Rider-Haggard, Frederic Harrison, G. F. Watts, Lord Leighton, Walter Besant, Dean Farrar, Marion Crawford, the then Bishop of Ripon, Henry Irving, Leslie Stephen, Edmund Gosse, Edmund Clarence Stedman, Thomas Bailey Aldrich, Richard Watson Gilder (these last three representing America), and Gabriel Sarrazin, with some two score names besides of persons of distinction in art, letters, and affairs.

The celebration at Horsham was a conspicuous success; but owing presumably to political pre-occupations at the moment, the actual financial response to the appeal was wholly inadequate notwithstanding the warm approval of the scheme by the Press of the world.

No alternative plan for employing the money collected secured the support of the promoters until the idea was hit upon to erect at Warnham, on a site as near as possible to Field Place, where the poet was born, a rural seat, wrought in stone, constructed to afford both rest and shelter to visitors. This suggestion met with the warm approval of practically all the signatories to the Centenary appeal living at the time of its inception, including Mr. Thomas Hardy, Mr. Frederic Harrison, Mr. Edmund Gosse, Mr. Walter Crane, Mr. Theodore Watts-Dunton, Mr. Thomas J. Wise, Mr. Austin Dobson, Dr. Boyd Carpenter, Mr. W. M. Rossetti, Mr. H. S. Salt, Mr. Buxton Forman, and Miss Alma Murray.

The late Mr. Walter Crane, an ardent Shelleyan, having expressed a wish to carry into effect the idea of the co-trustees—the erection of a canopied seat, set in with a bas-relief in bronze emblematic of some striking incident of the poet's career, as, for instance, his sudden death foreshadowed in the closing stanzas of "Adonais"—was requested to make the necessary drawings.

These very beautiful designs, completed by Mr. Crane just before his death, after his decease were mislaid, and have only come to light recently in the effects of the late Lieut. Lancelot Crane. Mr. Lionel Francis Crane, the architect, the elder son of Walter Crane, has now executed working drawings from the designs of his father. Estimates have been obtained, from which it appears (the cost of masonry having increased so greatly) that the outlay will approximate to £800. Of this sum upwards of £400 is in the bank (London, County, Westminster and Parr's) at Horsham.

We venture to make an appeal to the lovers of English literature and to the appreciators of Shelley's genius to supply the deficiency.

Donations should be sent to us at the addresses given below, and cheques should be crossed "Shelley Centenary Memorial Fund."—Your obedient servants, JAS. STANLEY LITTLE.
Chichele, Penn Hill Avenue, Parkstone.

"West Sussex Gazette," Arundel.

WOMEN'S HOLIDAY FUND.

To the Editors of The Journal of Education and School World.

SIRS,—May we once more through the columns of your paper plead the cause of the working women of London, and thereby secure for some of them at least the chance of a fortnight's respite from the toil and dull monotony of their daily lives?

We want more help to enable us to lighten the burden of the mother of a large family whose work is never ended and who

hardly knows what recreation means, of the lonely woman who, dependent on her own modest earnings for her livelihood, carries on patiently, year in, year out, the dull struggle for existence, haunted by the fear of one day losing even that small income.

The Women's Holiday Fund is striving to give to as many as possible of these tired and overburdened women the happiness and rest which a holiday should always bring.

The full cost of a fortnight's holiday, including railway fare, is about £3. £3 10s. will pay for a mother and baby. Towards this the applicants contribute what they can, according to their circumstances. Some, indeed, having once tasted the joy of a holiday, begin saving up for the next year directly they return home.

The Society starts this year heavily handicapped and with no balance in hand, and it depends largely on a generous response to this appeal if merely the standard of last year's work, when applications were strictly limited, is to be maintained.

A correspondent writes, "Your appeal nearly went into the waste-paper basket, but I happened to meet a woman in the street looking perfectly radiant, and I heard from her that she had just returned home after a fortnight's holiday, and how lovely it had all been and how well she felt, and so I thought if my small donation could only help to bring that radiant look on another woman's face, you should have it."

Is it too much to hope that all who read this appeal may likewise wish to bring a radiant look into another woman's face, and will send a donation, large or small, to: The Secretary, Women's Holiday Fund, 76 Denison House, 296 Vauxhall Bridge Road, S.W. 1.

A. F. LONDON,
MANUEL J. BIDWELL,
J. SCOTT-LIDGETT,
HELEN A. POWNALL (Chairman of Committee).

SCRIPT HANDWRITING.

To the Editors of *The Journal of Education and School World*.

SIRS,—I understand that Dover Education Committee has condemned the system of Script handwriting, and that at least one important London bank turns down all applications for positions without further consideration if the applicants make them in Script.

This is in essence an attack on a modern educational method which has justified itself over and over again by the admirable training it gives to immature caligraphy. If persisted in as a general objection it will constitute a serious handicap to the rising generation.

Bankers, and others, should recognize that Script, particularly Sloping Script, is such a basis for the formation of a clear, legible hand as none of the methods of writing-masters for generations past have attained. Its success as an educational training is beyond all doubt.

Let business men and local authorities realize that the choice in future lies between the adoption of Script and adapting it to their requirements on the one hand, or tolerating the formless, illegible scrawl which they have complained of for years.

Yours, &c.,

CHARLES MARSHALL.

2 Ranelagh Avenue, Hurlingham, S.W. 6.

HOLIDAY CONFERENCE ON SPIRITUAL VALUES IN EDUCATION AND SOCIAL LIFE.—The President of the Board of Education is to give the Presidential Address at this Conference which is to be held at Oxford from August 15 to August 29. Among the other speakers are A. Clutton Brock, Delisle Burns, G. D. H. Cole, Dr. Maxwell Garnett, Edmond Holmes, Principal Jacks, Prof. J. S. Mackenzie, J. M. Mactavish, Prof. Gilbert Murray, Dr. Rudolf Steiner (author of "The Threefold State"), and Malcolm Thomson (National Union of University Students). In addition to the speaking and discussion there will be stage demonstrations of Dr. Steiner's new art of Eurhythmie and Dramatic performances. Full particulars can be obtained from the Hon. Sec. to the Conference, 56 Bassett Road, W. 10.

TOPICS AND EVENTS.

THE MODERN LANGUAGE ASSOCIATION AND MOLIÈRE.—The June number of *Modern Languages*, the official organ of the Modern Language Association (published by Messrs. A. and C. Black) is a special Molière number which should appeal very largely to the general public. Among a series of most interesting articles is an appreciation of Molière by the eminent dramatic critic, Monsieur Fernand Nozière. Monsieur Georges Roth contributes a most illuminating article on the condition of the French stage in the days of Molière, Mr. Clouesley Brereton reports briefly on the Paris Tercentenary Celebrations, and Professor Rudler, of Oxford, writes most interestingly upon French society in the days of Molière. Another striking feature is a suggested Memorial Celebration in honour of Molière by Dr. F. H. Hayward, who has already made quite a name for himself by his attempts to bring back into our public life some of the picturesque ceremonial of the past. There are also interesting reports on Molière celebrations in schools and colleges, one from Johannesburg. Altogether, the number is a worthy tribute to the greatest name in the literature of our ally, and it should be widely read by all interested in French literature.

WORSLEY SCHOLARSHIPS.—The Council of King's College, London, have instituted a special Scholarship under the Worsley Foundation for the post-graduate training of a fully qualified medical man, with a view to his proceeding or returning to India as a Medical Missionary. The Scholarship is of the value of £150 together with free medical education at some Post-Graduate Institute. The ordinary Worsley Scholarship, which is of the value of £100, together with free medical education at King's College Hospital, is also offered. This Scholarship was founded for the education of Medical Missionaries proceeding to India. Applications, accompanied by testimonials, for these Scholarships should be sent to the Dean of King's College not later than August 31, 1922.

TOUR OF AMERICAN TEACHERS IN EUROPE.—Over one hundred Canadian and American School Teachers arrived at Liverpool on Saturday, July 8th, by the Canadian Pacific liner *Montcalm*. They are going to tour over fifty cities throughout Europe, including Ober-Ammergau, where personal visits will be made to the players of the celebrated Passion Play.

GIRL ECONOMIC STUDENTS.—An interesting experiment is being made by the International Labour Office of the League of Nations of accepting for a period of five weeks, four girl students from the Central School of Social Service, Brussels. The students will not be paid a salary, but will receive their board and lodging, and their work will be to assist in one of the services of the office. The main aim of the International Labour Office in making this small experiment is to do its best to help some deserving students in the field in which they are specially interested, and to afford them the opportunity of seeing at first hand the complicated machinery of international labour legislation.

WORLD BROTHERHOOD THROUGH EDUCATION.—Mr. W. C. Cove, President of the English National Union of Teachers, speaking at the Annual Congress of the National Education Association of the United States at Boston, on July 1, opened his address by declaring his belief that, with the necessary vision and goodwill, the co-operation of teachers in all lands would prove one of the strongest forces for peace amongst the democracies of the world. The schools and the children were a sacred trust, and the teachers must be faithful to that trust by endeavouring to eradicate national jealousies, prejudices, and hatreds, and by inculcating the desire for service to humanity in its fullest and broadest sense. The war had left the schools with an important choice—whether they should be the instruments of a narrow nationalism and a ruthless and material Imperialism, or whether their efforts should be directed towards the teaching of a large and common humanity. We could not evolve a world consciousness of essential dependence and unity by teaching an exclusive patriotism, but we could aid the forces of peace by evolving a world history and a universal geography. Solidarity and unification were an absolute necessity among the teachers—nationally and internationally—as well as a great sense of world perspective without prejudices and without sectional interests.

THE GERMAN MODERN LANGUAGE ASSOCIATION.—The eighteenth meeting of this Association was held at Nuremberg from June 6 to 9.

On June 7 Prof. Ackermann, Director of Secondary Education, welcomed the members in the historic hall of the Rathaus, and representatives of the Bavarian, Prussian, and Saxon educational authorities responded. Hofrath Schick, Munich, a former exchange professor, gave an enthusiastic account of his experiences, underlining the value of a study of American literature and the merits of American universities. The first session concluded with a historic retrospect of different phases of French national sentiment by Prof. Pirson, of Erlangen.

On the 8th Prof. Wechsler, Berlin, considered the educational significance of a study of German and French culture, the teacher's aim being to form the German type of man, not only by cultivation of the national type, but by comparison with the foreign.

Prof. K. Vossler, Munich, in a special lecture, asserted the greater educational value of Spanish literature, especially for younger students, as compared with French, which was more intelligible to adults. French was, moreover, losing ground as the universal language, while Spanish had a great future before it in South America and Europe. Prof. Bohm, Bremen, confirmed the important place occupied by Spanish teaching in the seaports, and Prof. Ackermann testified to the demand made for it in Nuremberg during the last thirty years. Mention was further made of the place assigned to Spanish in the Universities of Berlin, Hamburg, Würzburg, and Frankfurt on the Maine.

Of special interest for English hearers and international relations was a speech by Prof. Grund, Lübeck, who reported on the demand made for the study of English as the chief modern language to be taught. He indicated the preference given by the boys themselves to this subject, as against mathematics and natural science. In a lower class, it is true, a smaller percentage voted for English, in a higher some 60 per cent.

In an animated discussion, Prof. Deutschbein, Marburg, contended for the value of the study of English, quoting Paub's utterance that it was futile to maintain that classical languages only were of any value for formal training. He advocated the retention of French and English, leaving the question of priority to the local authority. This view was finally adopted after a vigorous attempt of the advocates of English as chief subject had failed to move the Conference to recommend the teaching of English as chief obligatory modern language. More moderate advocates of English, such as Deutschbein, were of opinion that, left to local option, English would be assigned the first place. It was reported that in Bavaria, the Ministry has now prescribed English as the first obligatory modern language to be taught.

Of the greatest importance for the record and teaching of living speech, as Director Walter, Frankfurt, emphasized, were phonographic reproductions of speeches, songs, &c., by prisoners of war, displayed by Director Doegen, of the Prussian State Library.

The last day of the Conference was spent on a visit to that most picturesque of old-world cities, Nuremberg.

POEMS OF TO-DAY.—The second series of this successful anthology has just been published. It is not to be imagined that any anthology will satisfy every reader; in this one the omission of any lyric by Ernest Dowson will strike everyone who knows anything of the poetry of the last half century. And among the war poems we miss the delightful "Crocuses at Nottingham," and the well-known "In Flanders Fields," by Colonel McCree. Still these are slight spots on a much needed school book and the English Association is to be congratulated on the result of its labours. These labours could not have been slight to obtain permission to reprint masterpieces from the publishers, and from executors and authors so eminent as: Thomas Hardy, Rudyard Kipling, George Meredith, Robert Bridges, Rupert Brooke, William Watson, J. E. Flecker, John Drinkwater, John Galsworthy, John Masefield, and Walter de la Mare. And it is to be presumed that this could not have been achieved, had there not been eminent authors and critics on the committee of the Association such as Sir Henry Newbolt, Edmund Gosse, E. V. Lucas, W. P. Ker, and John Buchan, who could influence the remission or reduction of copyright fees. As the first series is now in its one hundred and fiftieth thousand, the funds of the Association must have benefited considerably from the venture. Possibly other Associations will now follow the lead. A similar anthology of recent French poems, published, say, by the Modern Language Association, might be considered.

EDUCATION AT THE HULL MEETING OF THE BRITISH ASSOCIATION.—The draft programme of the Educational Section of the British Association for the Advancement of Science, which has just been issued, promises a wide and varied selection of subjects. The sectional president, Sir Richard Gregory, is taking as the subject of his address, "Educational and School Science," a topic with which he is particularly fitted to deal. Joint discussions have again been arranged, this year with the Psychological and Engineering Sections respectively. At the first of these joint gatherings the subject of psycho-analysis will be dealt with and authorities representing the two aspects of the subject, Dr. Kimmins, Dr. Crichton Miller, and Dr. Hamilton-Pearson, and others, will speak. At the second joint meeting, the effect of reformed methods in teaching mathematics will be discussed and Prof. P. T. Nunn and Mr. R. C. Fawdry have promised to speak. Two committees, upon "Training in Citizenship" and "The Teaching of Geography," are presenting reports on the second day of the meeting. Discussions have been arranged on "Imperial Citizenship" and on "English as the Basis of National Education"; at the former, Lord Meston and Sir Joseph Cook, High Commissioner for Australia, have promised to speak, while at the latter the principal speakers will be Mr. G. R. Pocock, Prof. Caroline Spurgeon, and Prof. Edith Morley. Papers will be presented at the meeting by Mr. R. C. Moore on the subject of advanced instruction in elementary schools, by Mr. I. S. Macadam on international students' organizations, by Miss F. Sayer on group work in infants' schools and the movement towards "individual work" with special reference to experiments in Hull, and by Miss C. T. Cumberbirch on the Dalton plan. Lord Haldane, who was to deliver an address on the ideal of our national education, will unfortunately be unable to do so as he has been ordered to take a complete rest for six months.

LOCAL EXAMINATIONS IN MUSIC.—The thirty-third Annual Meeting of the Associated Board of the Royal Academy of Music and the Royal College of Music was held at the Royal College of Music, South Kensington, on July 13. A satisfactory report of the work of the year was presented. For the Local Centre Examination the number of candidates in the United Kingdom was 7,243 and in the "School" Examination 44,490. Six Exhibitions had been awarded in the United Kingdom and a similar number in the Dominions and Colonies. Fifteen Exhibitions previously awarded had been renewed. Mr. E. Matthews, C.V.O., who presided, stated that the number of candidates entered this year for examination had reached a total of 70,000; this he attributed to the fact that the standards of the Examinations were known to be uniform throughout the British Empire. He then drew attention to the new Examination called the Final Grade, which would be offered for Pianoforte only, in the syllabus for 1923. This was intended to fill up any gap which might exist between the Advanced Grade and the Examinations for L.R.A.M. and A.R.C.M.

CAMBRIDGE SUMMER LECTURES.—The local lectures summer meeting organized by the University of Cambridge began on Saturday, July 29, and ends on Friday, August 18, and is being held in the University Examination School and the Arts School. The main subject of study arranged for this year is "Medieval and Modern Italy," and is divided into sections dealing with the general history, literature, art, &c., of the time. The inaugural address in connexion with the Italian history series was delivered by H.R.H. the Duke of Aosta, at 8.30 p.m. on Saturday, July 29, and on the same day the honorary degree of Doctor of Laws was conferred on his Royal Highness. Signor Marconi and Sir Rennel Rodd, former British Ambassador to Rome, are among the lecturers.

ALBERT KAHN FELLOWSHIP.—The trustees have elected Mr. John Henry Nicholson to this year's fellowship, which is of the value of £1,000. Mr. Nicholson is assistant lecturer at the University of Bristol, and was nominated by the vice-chancellor of the University. He is thirty-two years of age, and had a distinguished career at Oxford, where he gained First Class in the Honour School of Modern History and First Class in the Honour School of Theology. These unique fellowships were founded in 1910 through the generosity of M. Albert Kahn, of Paris. Candidates must be of British nationality, and have passed the examinations required for a Degree in some university in the United Kingdom. Women as well as men are eligible for election—the itinerary includes the principal states of Europe, the United States of America, Egypt, India, China, Japan, Ceylon, and Java. The trust is administered at the University of London.

ARITHMETICS FOR SCHOOLS

PUBLISHED AT THE

University Tutorial Press.

The Tutorial Arithmetic. By W. P. WORKMAN, M.A., B.Sc., Late Head Master of Kingswood School, Bath. *Third Edition.* (With or Without Answers.) 6s. 6d. KEY, 6s. 6d. net.

This is a scientific treatise on Arithmetic containing (i) a full account of the Theory of Arithmetic, elementary and advanced, (ii) a carefully graduated set of exercises for practice in the various rules, and (iii) a course of problems including both those of the usual type and also a large number intended to illustrate the Theory of Arithmetic, elementary and advanced.

The sections on Commercial Arithmetic have been very carefully written, and great pains have been taken to make clear the actual transactions as they occur in commercial practice.

The book is well provided with collections of exercises designed to develop in the pupil the necessary arithmetical skill, and at the same time to command his intelligent interest. There is a large and well graded collection of problems of all the types, and Section XI will be found to contain probably the hardest collection of arithmetical problems in existence.

"This book takes first place among our text-books in arithmetic. No other single book can compete with this one."—*Schoolmaster.*

The Junior Arithmetic. By R. H. CHOPE, B.A., Mathematical Master, Kingswood School, Bath. *Third Edition.* 4s. With Answers. 4s. 6d.

This book is an adaptation of the *Tutorial Arithmetic* specially suitable for use in Junior Forms. Great care has been taken to preserve the careful scientific treatment of the subject which characterizes the original work, and also the lucid explanations of practical rules.

There is an adequate treatment of the Mensuration of the simpler figures plane and solid, and the Metric System and Decimal Coinage have been fully dealt with.

A chapter on Graphs has been inserted dealing mainly with statistical graphs and interpolation.

Two chapters of the book are devoted to algebraic symbols, and their uses in connection with formulae equations and problems, and a thorough attempt has been made throughout the book to break down the barriers between arithmetic and algebra.

"No better Arithmetic has come into our hands."—*Scottish Educational Journal.*

The Preliminary Arithmetic. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. 6d. With Answers. 3s.

This book is suitable for pupils of ten to fourteen years of age. It contains definitions, rules, worked examples and exercises, and prominence is given to factors and their applications. A special feature of the book is the large proportion of exercises that are set in problem form: as a rule the numbers are reasonably small so that the pupil's attention is not unduly diverted from the subject of the problem by the intricacy of the calculations.

"The chapters are clearly written, carefully arranged, and accompanied with plentiful supply of examples and exercises."—*School Guardian.*

"An excellent course of Arithmetic."—*Journal of Assistant Masters' Association.*
"Admirably suited for its purpose."—*London Teacher.*

The School Arithmetic. By W. P. WORKMAN, M.A., B.Sc. *Second Edition.* 5s. With Answers. 5s. 6d. Also in Two Parts: Part I. With or Without Answers. 3s. Part II. 3s. With Answers. 3s. 6d. KEY, 6s. 6d. net.

The School Arithmetic is an adaptation of *The Tutorial Arithmetic*, in which those portions dealing with the higher theory of arithmetic, together with all problems of excessive difficulty, have been omitted. The space occupied by these portions has been devoted to other material more suitable for ordinary school purposes, viz. a large selection of miscellaneous examples arranged in graduated Examination Papers, a fresh set of examples in Approximations, and a further collection of miscellaneous problems. Special care has been given to the section on Commercial Arithmetic. In the second edition chapters on Logarithms and on Graphs have been inserted.

CONTENTS:—Part I. The Four Rules—Weights and Measures—Factors and Multiples—Vulgar Fractions—Decimal Fractions—Application of Fractions. Part II. Ratio and Proportion—Commercial Arithmetic—Mensuration—Problems—Powers and Roots—Logarithms—Graphs.

"The best arithmetic for schools on the market."—*Mathematical Gazette.*

Clive's New Shilling Arithmetic. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. 1s. 9d. With Answers. 2s. 3d. Answers (separately). 1s.

This book contains a collection of exercises and problems for both oral and written work in schools. Many teachers prefer that their pupils should learn the theory and principles of the subject entirely by oral instruction, and it is hoped that these will find the present volume well suited to their purpose.

Most of the exercises are given under the headings of the various rules, but there are also numerous collections of miscellaneous examples for general practice. Great care has been taken in graduating the exercises, and also in setting such questions as will train the pupil's intelligence, and enable him best to understand the real meaning of the various arithmetical processes.

The book contains all that a good teacher would expect his pupils to commit to memory, such as rules, definitions, etc.

"A comprehensive and well-graded collection of exercises and problems for both oral and written work."—*Scottish Educational Journal.*

The Primary Arithmetic. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. *Third Edition.* In Three Parts. Part I. 1s. Parts II and III. 1s. 6d. each. With Answers: each Part 2d. extra.

An Introductory Course of Simple Arithmetical Exercises covering all the subjects usually taught in schools, from the four simple rules to stocks and shares, including sets of miscellaneous examples.

In this book the first examples on a new rule are oral, involve only small numbers, and are heuristic; that is to say, it is intended that as far as possible the pupils should construct the new rule for themselves by puzzling out under the teacher's guidance a set of the simplest problems available.

"The examples increase in difficulty by almost imperceptible stages, and they are very suitable for young scholars."—*Nature.*

A Complete Catalogue of Educational Publications post free on application.

University Tutorial Press, Ltd.,

HIGH STREET, NEW OXFORD STREET, LONDON, W.C.2.

CARE OF THE BABY.—The National Baby Week Council, Carnegie House, 117 Piccadilly, W. 1, has issued a number of pamphlets and reports, a complete list of which has now been prepared. The pamphlets, many of which are written by well-known authorities, cover a variety of subjects on home-life, and the list should be in the hands of all teachers who are endeavouring to instil into the older girls in their schools correct ideas of home management and the care of young children.

WOMEN'S ATHLETICS.—Lady teachers will be glad to learn that a Women's Amateur Athletic Association has been formed which is affiliated to the A.A.A. The objects of the new association are to co-ordinate women's athletics in this country, to give assistance and advice as to training and sporting events suitable for women, to foster the true amateur spirit in women's athletics, and to ensure adequate representation of this country in future international contests. Full particulars of the Association can be obtained from Major Marchant, Director of Physical Education, The Polytechnic, Regent Street, W. 1.

SCHOOL ANTHOLOGIES.—The issue of *Poetry* for June and July contains, in addition to a number of charming verses, a valuable essay dealing with current methods of producing school anthologies, by Mr. R. Crompton Rhodes. Mr. Crompton Rhodes says that when publishers want an anthology compiled they naturally approach a poet of reputation and ask him to do the work. The objection to this method, so far as school anthologies is concerned, is that the compiler has little real idea of the true impression made on children by poems, and that he is likely to show a bias towards the work of those of his own school of thought. Mr. Crompton Rhodes has therefore suggested a scheme, which is backed by the editor of *Poetry*, for compiling an anthology by teachers, as persons who know the value children attach to particular poems. Teachers are therefore invited to contribute lists of ten poems to *Poetry* for which a prize of two guineas is offered. Lists or essays referring to ten suitable poems should be sent in before September 10th.

PUBLISHERS' PERIODICALS.—Publishers issue, from time to time, catalogues of their more recent productions and two very attractive booklets, "The Periodical," from the Oxford University Press, and "Now and Then," from Jonathan Cape, of 11 Gower Street, are now before us. The former is illustrated mainly by a number of reproductions of striking designs by William Blake, from the edition of Gray's poems which the Oxford Press has recently published, and there are numerous extracts from other publications from the same press. A number of useful historical and geographical books have recently been issued. Mr. Cape's pamphlet makes interesting reading, but is of a more general nature.

SCIENTIFIC INSTRUMENTS.—A short time ago the Institute of Physics, with the assistance of the Department of Scientific and Industrial Research, issued a *Journal of Scientific Instruments*, and it was proposed to publish the journal regularly. Such a magazine would have been of great service to science teachers in keeping them informed of the apparatus available for various subjects, and a form was inserted in the first number asking those who wished to support the journal to inform the Institute of Physics. We understand that the response has not been satisfactory, and all who would find this publication of value are reminded that unless sufficient support is forthcoming, a second number of the journal will not be issued.

MACLEAN SCHOLARSHIP IN SEMITIC LANGUAGES.—The first award of this scholarship has been made by the University of Glasgow to Mr. D. S. Stiven, of St. Mary's College, University of St. Andrews. The scholarship (which is of the value of £175 for one year) was founded by the late Rev. John MacLean, of Glasgow, and is open to students of the four Scottish Universities who have completed their course of study in the Faculties of Arts and Divinity. The scholar is required to reside for six months in a country where Arabic is spoken.

CAMBRIDGE HIGHER LOCAL EXAMINATION AND EXAMINATION FOR CERTIFICATES OF PROFICIENCY IN MODERN LANGUAGES.—The Syndicate are discontinuing after this year the Higher Local Examination and the Examination for Certificates of Proficiency in Foreign Languages. Arrangements will be made for the award of Certificates of Proficiency in English or in Religious Knowledge after 1922 by means of the Higher School Certificate Examination supplemented by special papers. The regulations for 1923 can now be obtained from the General Secretary, Syndicate Buildings, Cambridge.

FOREIGN AND DOMINION NOTES.

FRANCE.

To future historians ours will be the darkest of all the Ages; for we conceal everything under initials. Initials; and Even in our own day we are becoming unintelligible one to another. What does a Spaniard understand by a "Waac"? What a Yorkshireman by "un professeur d'E.P.S."? It is essential to the success of the "League of Nations" that it should have a generally recognized name; in France it is known as the S.D.N., a group of letters which a Frenchman, but not a Turk, readily apprehends as standing for "Société des Nations." From the papers before us we could collect abbreviations that would paralyse the most experienced journalist, and a soberly written article in a French educational journal contains the affecting sentence: "Un instituteur dirigeait une leçon de grammaire destinée au C.M. tandis que les élèves du C.E. et ceux de la S.P. étaient respectivement occupés à des travaux écrits." Against another contemporary abuse it is a French writer that rails in *L'École et la Vie* (v. 39). It seems that the Society for the Protection of Horses, at its last general meeting, urged that a "journée du cheval," or Horse Day, should be arranged for in all the schools of France. The pedagogue is indignant: "On a déjà demandé une journée de l'Arbre, une journée de l'Eau, une journée des Oiseaux, &c., &c."; if the horse is to have (like every dog) its "Day," why not the ox, the sheep, the pig, the automobile, the aeroplane, and so forth? The National Federation of Teachers in *lycées* has solemnly protested against a multiplication of "Days" and begs that children may have a little leisure left them in which to learn reading, writing, and ciphering. Abbreviations and "Days"—they are trivial objects amid the jetsam of war; let us not give them importance by exaggeration of use.

France is making much use of the kinema in art and industry; thus we read of a film exhibiting the processes of lace-making. *La Vie Universitaire* (iii. 6) reports the latest application. Einstein's theory has hitherto been the private property of a group of savants; the kinema is now to give the masses the power of apprehending the complicated phenomena with which the theory deals. "Le cinéma, c'est essentiellement du mouvement et l'idée de s'en servir pour éclairer ce qui est, en somme, une conception nouvelle du mouvement, semble juste." The merit of initiative belongs to four *physiciens*—the modern use of "physicians" robs us of the literal translation—of Brussels. We take from the French writer an account of one of the films. The spectator is to contemplate the journey of the earth round the sun: "À l'endroit du globe où se situe l'équateur, se trouve un canon monstre. De ce canon part, à l'heure du coucher du soleil, un projectile, également monstre, tiré dans la direction du soleil. Puis la terre continue son mouvement giratoire et, le lendemain matin, au lever du soleil, un nouveau projectile, tiré dans sa direction, part du même canon. On voit ensuite le projectile tiré le matin, c'est-à-dire douze heures après le premier, rejoindre celui-ci dans l'espace, le dépasser et arriver bon premier dans le soleil."

GERMANY.

The Representatives' Meeting of the German Lehrerverein at Hannover in June gave an indication of the new meaning of *Allddeutschum*; for to it there came forty-six representatives from Austria, who were admitted to the union and promised fidelity to it. Like the American National Education Association, the German teachers formulate their opinions in "Resolutions"; such resolutions are necessarily compromises, and compromises are wont to be more prudent than inspiring. The representatives deplored the present distress of the young teachers. Although the school population grows less numerous, new teachers are trained; so that now, in Prussia alone, there are 16,000 *Junglehrer* unemployed. The meeting showed a clear desire to regard the work of a school as a whole, and it even rejected *Staatsbürgerkunde* (civics) as a separate school subject, since all the teaching, and that of history in particular, should aim at the making of citizens. The teachers held fast to their principle, laid down in 1919, that the highest function of a State school is to educate, with all its life, moral personalities; the teaching of definite creeds should be left to the churches that profess those creeds and should be done outside the school.

(Continued on page 514.)

Cambridge University Press

Cambridge Historical Readers

Edited by G. F. BOSWORTH, F.R.G.S. In five books, each book containing a coloured frontispiece and numerous illustrations, maps, and plans.

Book I, Introductory (Stories of Greece and Rome)	2s 9d	Book III, Junior	3s 3d
Book II, Primary (Stories of Great Men and Women in British History)	3s 0d	Book IV, Intermediate	3s 6d
		Book V, Senior	4s 3d

The last three deal with the history of Great Britain and Ireland and the Dominions beyond the Seas, and are on the concentric method.

"The series is characterised by its historical accuracy, its thoughtful method, and its literary style, no less than by its excellent get-up and useful illustrations. The high opinion we have formed of them will, we feel sure, be shared by all teachers who are in search of reliable, well written, and well planned historical readers."—*The Schoolmaster*.

The Cambridge Geographical Readers

Edited by G. F. BOSWORTH, F.R.G.S. Crown 8vo.

1. The World and its Wonders.	2s 9d	5. The British Empire.	4s 6d
2. England and Wales.	3s	6. Some Great Regions of The World.	4s
3. The British Isles.	3s 6d	(a) The Monsoon Lands of Asia,	
4. Western Europe and the Mediterranean Region.	4s 6d	(b) The Nile and the Amazon,	
		(c) The Wheat Lands of America.	

All the books are fully illustrated by photographs of typical scenery, towns, plants, animals, and people.

"A most successful attempt to carry out the excellent 'suggestions' of Board of Education Circular. 834. . . . It is difficult in the course of a line or so to deal with the many merits of these well illustrated and entertaining Readers."—*The Educational Times*.

Cambridge Geographical Text-Books

General Editor: G. F. BOSWORTH, F.R.G.S.

Junior: By A. R. CHART-LEIGH, M.Sc. Crown 8vo. With 65 illustrations and 5 diagrams. 5s

Intermediate: By A. J. DICKS, B.A., B.Sc. Crown 8vo. Third edition, 1920. With 62 illustrations and 20 maps and diagrams. 6s

"Clearly written, containing a vast amount of information, simply paraphrased, and beautifully illustrated, it represents the high water mark of such work."—*Education on the "Junior Text-Book."*

Senior: By G. F. BOSWORTH, F.R.G.S. Crown 8vo. With 71 illustrations and 29 maps and diagrams. 7s 6d

Five sections of this book, viz: those on Europe (excluding the British Isles), Asia, Africa, Australasia, and America, will shortly be issued separately at prices ranging from 1s 6d to 2s 6d.

Cambridge Readings in Literature

Edited by GEORGE SAMPSON.

The books in this series have been prepared for use among pupils between the ages of 12 and 16 and are thus suitable for the middle forms of secondary schools, the four years of central and higher grade schools, the upper standards of elementary schools, and the literature courses of continuation schools.

The prices of the different books (each containing 20 or 24 pictures) are as follows:—

	School edition (Cloth flush)	Cloth limp
Book I	3s 6d	4s 3d
Book II	3s 6d	4s 3d
Book III	3s 9d	4s 9d
Book IV	4s	5s
Book V	4s 6d	5s 6d

Books I and II (school edition) are issued in two parts: Book I, Parts 1 and 2, 2s 3d each; Book II, Parts 1 and 2, 2s 3d each.

"These five volumes are an object lesson in the way things ought to be done. They are well printed, and special care has been taken with the text. . . . The child who could not find here . . . something to set him on the way to an intelligent love of literature or art would be a hopelessly dull child."—*The Observer*.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

since the New Constitution was an obstacle to this, a common school was approved in which religious instruction should be given to the children separately according to the several creeds. The Germans, we observe, are in a difficulty with their *Reichsschulgesetz*, which proposes that any group of cranks may have its own school. It seems that to conform to the terms of the New Constitution the Government must destroy that *Volksschule* so long the boast of Germany. As we are writing comes the news that the Imperial Government has postponed the effort to grapple with the difficulty: "The Imperial Government will negotiate with the several political parties to discover a final solution of the problem; but holds that in the present circumstances a further discussion of the Bill is not advisable."

France will hear nothing of co-education. When lately the Philologenverband met at Hildesheim and discussed the question of girls' schools, an address by Studienrat Dörner expressed, as it seems, the opinion of German schoolmen (of the higher sort). Let us summarize it. From the mothers of the coming generation is the rebirth of Germany to be hoped, and therefore the State must give more heed than before to the education of girls. The parts of a woman's nature which distinguish her from man require separate fostering and development. For this reason, to say nothing of moral dangers, the co-education of the two sexes is to be condemned in principle and tolerated only as an emergency measure. The special province of the woman is that of mother and house-manager; so that, to complete the education of a girl, a *Frauenschule*, or school of domestic economy, should be attached to the Lyzeum. The German view of woman's mission continues, we perceive, to be a modest one. As to co-education, it should be judged after close and impartial examination of its results and not by *a priori* arguments as to its fitness or unfitness.

ITALY.

The article with which the *Rivista Pedagogica* (xv. 3-4) opens "La crisi della scienza esaminata da un filosofo," is full of interest for both the scientist and the philosopher. More in our sphere lies another. Under the influence of Dr. Montessori Italy is now studying thoughtfully the education of the youngest children; and this is how Antonio Rieppi, in an article "Intorno alla possibilità di un nuovo indirizzo dell'educazione infantile," projects a rural school for them. "A vast courtyard, girt with a hedge; a plot of land to serve in part as a kitchen garden and in part for flowers; hill-like elevations with trees arranged in thickets upon them; a piece of ground on which to grow all country produce and a fountain to supply it with a streamlet of running water; a central building with a large hall, well lighted and ventilated; a shed; a poultry run; a little sheepfold in which to rear lamb and goat; an enclosure for rabbits; guinea-pigs; two bee-hives; and agricultural implements made on such a scale that little hands can use them." In general, Rieppi advocates "natural education" of a sort towards which some progress has been made in the Asilo di Mompiani controlled by Rosa Agazzi. For particulars we must refer our readers to the article, lacking ourselves space to discuss the subject.

UNITED STATES.

The meeting of the Seventeenth National Conference on Child Labour, which took place at Providence, R.I., in June, served to bring into full light the struggle that is being made in the United States for the defence of children. In May an Act to benefit them, called the Federal Child Labour Tax Law, was pronounced unconstitutional by the Supreme Court of Judicature. The rebuff is but a new stimulus to those whose ultimate goal is the abolition of child labour. In America, as in England, the chief use of the child is to cheapen production. Thus in the Southern States child labour is freely employed; during the great textile strike in Rhode Island this was alleged to justify a lengthening of the working day and a reduction of wages, so that the competition of the Southern cotton mills might be met. Yet the Legislature of Rhode Island has passed a law that, to secure a "work permit," a child must not only be fourteen years old and able to read and write English, but must also have completed a course of study equivalent to six yearly grades. In other States, too, the children have effectual friends: Virginia has raised its compulsory school age; Mary-

land has established a Bureau of Child Hygiene in the State Department of Health; New York has prohibited delivery work to girls under eighteen. As we write, active preparations are going on for the meeting at Rio Janeiro, August 27th-September 5th, of the Third Pan-American Congress on Child Welfare, to be held in connexion with the celebration of the centenary of Brazilian independence. In England we had been planning to protect the children by means of a great national system of Continuation designed, whilst aiding commerce and industry, to elevate the young engaged in commercial and industrial pursuits. Section 10 of the Education Act, 1918, represented, as it were, the first wedge. Mr. Fisher was about to strike home the little instrument which he had forged when Economy tickled him under the armpit. But to the friends of children in England, as to the friends of children in the United States, rebuff will serve only as a new stimulus—of which fact the Pan-American Congress assured!

Beneficent in many directions, the Rockefeller Foundation promoted the forming in 1919 of a Committee for the Study of Nursing Education. The vocation of a nurse is one of grace and utility. Preparation for it, says the Report just issued by the American Committee, should be given not only in hospitals, but also in universities: "The development and strengthening of university schools of nursing of high grade for the training of leaders is of fundamental importance in the furtherance of nursing education." This type of school should, in the judgment of the Committee, be a separate and independent part of the university, cognate in rank and organization with the School of Medicine or the School of Law. More than a dozen American colleges and universities now provide combined courses through which students may acquire both a nurse's training and a college degree in five years, two years being devoted to the regular college course, two years to intensive training in the hospital, and a fifth year to one of the higher specialties of nursing—public health, institutional supervision, or nursing education. It is objectively that we treat this matter, expressing no opinion on it.

SOUTH AFRICA.

On May 31st the birthday of the Union of South Africa was impressively celebrated by the educational institutions of the town of Paarl. Over twelve hundred students and senior pupils from the Training College, the four high schools, and the primary schools assembled in the Market Square, where the Superintendent-General of Education delivered an address on the meaning of Union Day. The students then proceeded to the Paarl mountain, and, after other appropriate addresses had been given, planted trees in a chosen place. The text of Dr. Viljoen's speech is printed in the Cape of Good Hope *Education Gazette* (xxi. 28). Wisely did the Superintendent-General impress on the young folk that the chief task of the future in South Africa was the obliteration of all race prejudice. The same number of the Cape *Gazette* contains a defence by the Education Department against a charge of extravagance. The payment of *native* teachers is now governed, not by the Department, but by the Financial Relations Act. The average salary of a European man teacher is £360; that of a woman is only £184; a commencing teacher (with the lowest certificate) receives £135. The Department insists that, with free education, school books and other requisites should be supplied free. To the economists who ask for the appointment of a "Geddes Committee" it is replied that several of the economies recommended by the English Geddes Committee are already in force. Of all forms of retrenchment approved in England or at the Cape we deprecate most that of raising the proportion of pupils to teachers—if it goes so far as to impair the efficiency of the teaching.

NEW SOUTH WALES.

We learn from the *Education Gazette* (xvi. 5) that some Australian birds, in spite of efforts to protect them, are disappearing, and that among these is the Australian bustard (*Austrotis australis*). To the warbling grass parrot, known as the budgerigar or love-bird, for which February-June has hitherto been an open season, the Chief Secretary has now extended absolute protection. As in America, so in Australia, the schools are exhorted to aid in preserving the fauna.

DUSTLESS AND HYGIENIC SCHOOLS

USE

FLORIGENE

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the SUMMER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods — which is even of greater hygienic importance.

FLORIGENE has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

PAINTING AND "NATURE" STUDIES.

500 British and Foreign Birds and Small mammals, carefully stuffed by expert taxidermist and mounted on stands for painting studies. Thousands of tropical butterflies mounted in neat glazed cases (glass both sides), giving a fine range in colour and design. Selections on approval. Cases of British butterflies, moths, or beetles, illustrating the most beautiful species, tropical shells, &c. British Lepidoptera, list of 700 species with English names, British Coleoptera, 2,000 species (200,000).

About 300 volumes of books on Natural History. Particulars from

A. FORD, Naturalist, 36 IRVING ROAD, BOURNEMOUTH

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W. 1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness :—

"Two years ago you sent me a pupil named ——. Through her parents I have had **four** good pupils this year from four different places, and through two of these have **five** more coming this term: that is, ten pupils from paying **one** commission."

"Personally, I have found your firm to bring in **90 per cent.** of the pupils who come to me through Scholastic Agents."

"Hearty thanks for your continued recommendations, which bear such excellent fruit in the number of boys that I get through you. I find that out of my **32** boarders **16**, or exactly one half, have been sent here by you."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

LONDON UNIVERSITY DEGREES.

University Correspondence College

FOUNDED IN 1887.

Provides Courses of Preparation for the

MATRICULATION INTERMEDIATE and DEGREE

Examinations of
LONDON UNIVERSITY.

From the foundation of the College in 1887 to the end of 1914, **22,472** U.C.C. Students passed London University Examinations, averaging over **1,000** annually during the nine years 1906-14. During the War the number of successes naturally decreased, but in 1920 the number of passes was **1,007**, and in 1921, the unprecedented total of **1,357** was reached.

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

VIII.

ART.

By R. D. LAXON.

IN the short time allowed to art by the school time-table we have set ourselves the task of training the mind through the eye, and of forming the taste of our students, and too frequently we have in addition to attempt to counteract the daily influence of ugly surroundings. Our teaching has little in common with the academic methods on which, until recently, all art teaching was based. There should be an artistic purpose beyond that of mere representation whenever a study is made, and in this way our students will be made to realize the underlying principles on which a work of good art depends, whether it be picture or platter. The achievement of these aims calls for every possible supplementary aid. They cannot be too many if used with discretion.

These aids may be roughly divided into three groups.

1. *Equipment, including mechanical aids, apparatus, books, pictures.*
2. *Methods of teaching, correlation with other subjects and art in school life.*
3. *Aids from the world outside the school.*

Apparatus and Equipment. Under this heading it is difficult to draw a distinction between those aids which may be classed as supplementary, and those which are necessary before the subject can be effectively taught at all. A Yorkshire inspector is reported recently to have told an art master that his chief business was to teach the use of the pencil, and if we accept this estimate of his

function, the only necessary equipment would be little more than pencil, paper, and india-rubber. Fortunately, however, the generally accepted view of educational authorities is that drawing is only a means to an end and not the end in itself; and that the art room is an important influence in the cultivation of the taste of the ordinary citizen for that beauty which is not a mere accident but which pervades creation, and his realization of the close connexion between ugliness and moral disorder. Further, he will be taught to see that success in art is a commercial and international asset, which we cannot afford to neglect. The *necessary* equipment must then at least include: apparatus for the teaching of colour; specimens of craft-work; photographs of architectural masterpieces; and reproductions of representative pictures. The great importance of surrounding students with examples of the best art, when their taste is being formed at the most impressionable period of their lives, cannot be too strongly emphasized, consequently the school collection of pictures should contain one good example of all the important schools of architecture, sculpture, and painting, including those of China and Japan. Photographs of the Parthenon and its sculptures, and a good example of thirteenth century Gothic should be among the permanent exhibits in the art room itself. Frames with movable backs should be provided for the insertion of temporary exhibits, such as posters, and the valuable material which can often be gleaned from magazines. Students should be encouraged to collect and classify this. Newspaper references to matters of artistic interest should be exhibited in the art room and discussed, such, for example, as those dealing with the sale of the "Blue Boy." Our future citizens should know of these occurrences and appreciate the loss to the country. The suitability of the art room itself, which must be well lighted and should contain a sink and water supply, also comes under the heading of necessary equipment and need not be considered here. This digression is necessary as the teaching of art, unlike science, is often carried on under the most unsuitable conditions.

"Drawing" is a subject which lends itself to the multiplication of mechanical aids, and it behoves us to be wisely restrained in their use. For instance, there are numerous devices for smoothing away the difficulties of perspective, but rules and appliances tend to damage the powers of observation, and it is doubtful if they are to be recommended. It must be mentioned here that perspective, light and shade, indeed all that has to do with the highly specialized skill necessary for pictorial representation, should take quite a subordinate place in secondary school work, which should be concerned rather with structure, handicraft, decorative design, and architecture, than with accidental appearance and aspect. The geometric models, which have lately fallen into disrepute, should be used as type-forms and not drawn for their own sakes. Their complete banishment from some art rooms is an instance of the work of the too ardent reformer.

The lantern is undoubtedly a most useful addition to our equipment. Every school should have its own collection of slides to meet its own needs which loan collections fail as a rule to satisfy. These can easily be made by any one with a knowledge of photography. The most convenient form of lamp for the lantern is the electric one which can be attached to the ordinary lighting circuit.

Books. Every teacher of experience knows that certain books are indispensable to him. Walter Crane's "Bases of Design" and "Line and Form"; Prof. Banister Fletcher's "History of Architecture"; "Pattern Design," and other works by Lewis F. Day; also a good book on "Historic Art" should be in every art room. The more extensive the Art Library of a school is the better, while a lending department is a valuable influence. The stimulating effect of such a book as Ruskin's "Modern Painters" on a thoughtful boy may be very far reaching. It has recently been the fashion to decry Ruskin, but if the great test is applied: "What did his writings inspire men to

do?" the result will be a sufficient answer to his detractors. The text-book was, until recently, an aid which had perforce to be dispensed with, since it had not been written. This is not surprising seeing that the aims of art teaching in the schools were not generally understood. Even now there is theory abroad that haphazard go as you please methods may be a positive advantage. But the truth is that in the study of line, values, and colour, and all that concerns the grammar of art, our teaching cannot possibly be too methodical. The time has come when the matter should be thoroughly discussed and the principles of such teaching agreed upon. There can, of course, be no finality about any text-book, it must in the nature of things need constant revision. Prof. A. W. Dow's book, "The Theory and Practice of Teaching Art," is to be warmly recommended as one of the very few useful books dealing with the "synthetic" method.

Method. When it is remembered that art draws its inspiration from all that is beautiful in form and colour, both natural and fashioned, it will be seen that the possible choice of supplementary aids which can be used in the method of approaching the actual work of teaching is vast as the visible world, and, with such a wealth of material to choose from, the danger of becoming too excursive must be guarded against. This is a very real danger, as every teacher who takes his students only once a week knows. What is here meant by the "method of approach" may be briefly illustrated by a few examples. A series of lessons is being given on the wing of a bird. The wing is first discussed from an anatomical point of view and illustrative diagrams are drawn on the blackboard. A further interest is given to the study by references to the symbolic use of the wing in Egyptian and Christian art; and finally the wing is considered from the aesthetic standpoint, special attention being called to the radiating arrangement of the quill feathers, the scale-like arrangement of the protective coverts, and the beauty which arises out of perfect fitness to function. All this is preparatory to an exercise in design for which the wing forms the motive. Again lessons are being given on the spiral in nature and art. The Nautilus may be used as an example. Oliver Wendell Holmes's poem "The Chambered Nautilus" will be quoted. Further examples of the spiral in shells and other natural forms will be given, and finally the students will draw the Greek Ionic Capital. One more example—this time a lesson on lettering. It is started by a discussion on the origin of writing. Mention will be made of the prehistoric drawings of the cave men. Egyptian and Chinese picture writing will be referred to, leading to the development of the alphabetic characters, and the decipherment of the Rosetta Stone. The practical part of the lesson will consist of drawing the Roman capitals. Lack of space forbids a more detailed treatment, or the giving of further examples, but these will suffice as indicating methods of approaching classroom work which may be classed as supplementary aids.

Memory Drawing. It is impossible to overstate the importance of the cultivation of the power of visualization through memory drawing. The lantern is almost indispensable here, making possible as it does the introduction into the classroom of material which would be otherwise unavailable. The quick exhibition and removal of a slide in a darkened room tends to help concentration and the clearness of the mental image.

Several of the recognized intelligence tests are carried out through the medium of drawing and these are excellent exercises in mind picturing. A disc of white paper may be taken and folded into half and then folded again. The straight edges are then cut with scissors into any simple shape and the class is asked to draw the disc as it will appear when opened. The geometric arrangement arrived at in this way may be made the basis of a subsequent lesson in spacing and design. The methods described by Mr. R. Catterson-Smith in his recently published book "Drawing from Memory and Mind Picturing" are most valuable

aids to secondary school work where the aim of forming the taste of the students depends to a great extent on memory and the closely connected faculty of imagination. Many useful hints on this subject are also to be found in Sir R. Baden-Powell's book, "Scouting for Boys."

Class Teaching and Individual Teaching. When, as is frequently the case, the class numbers thirty or more it is necessary to use every possible expedient which will help us to give individual attention when the nature of the work makes this advisable. A large class is not always a disadvantage. For anything in the nature of a lecture where information has to be imparted or enthusiasm communicated the larger the class is the better. Other kinds of work such as systematic colour study, and much of the work of the drill variety in the junior forms, call for collective treatment, and the arrangements for the distribution and collection of materials must be carefully thought out. But for the lesson, as opposed to the lecture, it is often necessary to split the class into groups or even individuals. Especially in the upper forms, where drill methods are entirely unsuitable, it is wise to allow great freedom of choice and opportunity for self-expression. This inevitably leads to widely different designs in various stages of progress. The supervision of such work in a large class is very exacting for the teacher; however, the gain in interest and value is too great to allow difficulties to stand in the way. The system of working in pairs or groups, each student contributing his unit, has been found a valuable means of encouraging co-operation in craft work.

Correlation. When considering the correlation of art to other subjects in the school curriculum we naturally turn first to handicraft. Indeed, although the art course has its own distinct aims in the formation of taste and appreciation, there must be a far closer union between the workshop and the studio than is generally the case. When designing a common object beauty must not be thought of as something added, some adventitious decoration, but as inherent in every line of its form, as arising out of its functional use and a frank admission of the nature and limitations of material and method. The distinction between the "fine" and the useful arts must be forgotten. It is always dangerous to divorce the beautiful from the useful. It cannot be said that our national taste in such matters has been good. Our craftsmen have at times produced beautiful work, but there does not seem to have been much intelligent appreciation of their work on the part of the general public. Chippendale and Sheraton were relegated to the garret to make room for Victorian monstrosities in mahogany and horse-hair. Following came a craze for collecting these and other "antiques," a craze which has given rise to that horrible prostitution of the craftsman's art, the production of fakes. The way to improvement is not through revivals, or attempts to recapture the spirit of the old craftsmen by using their primitive methods. Healthy art must be an expression of everyday life and not a refuge from it. It follows that the choice of the most suitable crafts for school work should be governed by the needs of the present day. We cannot afford much time for the practice of crafts which no longer bear much relation to the actual work of the world, though of course these will be studied in connexion with the history of art. Woodwork, metalwork, pottery, clay-modelling, may be mentioned as suitable crafts affording ample scope for the practical study of structural beauty; stencilling and needlework as decorative crafts which exemplify the conventions which arise from a right use of tools and material. Stencilling is also an aid to colour study, and has the further advantage of requiring no special and costly equipment, while the handling of the knife in cutting the pattern is a most useful manual exercise. Woodwork affords many opportunities for co-operation with the art room. Simple articles such as brackets should be designed in the art room and carried out in the craft room. The proportions of the pieces of wood from which the article is to be made should be stated, the construction

explained, and the students allowed to design the actual shape themselves. This lesson may be preceded by a talk on the combinations of curves and straight lines to be found in Greek mouldings. A design for a finger-plate or a key-hole plate in metal would introduce the study of the shapes which are suitable for chiselled metal as opposed to those possible when the grain of the wood has to be considered.

Clay modelling is the best medium for the study of certain types of form both natural and fashioned, but it should be used only for those forms which lend themselves to treatment in clay. Such, for instance, as pottery or architectural detail. Natural unconventionalized leaves and flowers should never be attempted in clay, as even in the hands of a master such efforts can only lead to a clumsy interpretation of natural form. Modelling compels attention to construction and design since it is almost impossible to begin with the details, which is such a fatally easy habit for the beginner to acquire in drawing.

In our study of structural beauty arising out of functional fitness emphasis should be laid on those forms which are the product of the collective mind, such as the handle of a saw or the propeller of an aeroplane. A collection of illustrated trade catalogues will provide useful material for these lessons. Visits to works should be arranged to increase the students' interest in local manufactures and art industries. It should be made quite clear that the simplest materials often give the most beautiful results. *Peu de moyens, beaucoup d'effet* is an excellent motto in all craft work.

Nature Study. This is another school subject with which art is closely associated, though it is undesirable to attempt a strict correlation between the two subjects. In the limited time at our disposal this would lead to an entire sacrifice of other and quite as important aims in our art teaching; while it would seriously hamper the syllabus of both subjects. It is, however, frequently desirable for the art master to give a nature study lesson, as already instanced in the case of the bird's wing, or when he has to explain the solar spectrum in connexion with the study of colour. Collections of shells, butterflies, feathers to show brilliancy of colouring, are a necessary part of the equipment of the art room. Children love nature, and the appeal is generally through form and colour. It is a matter of the greatest importance that whatever specimens are brought into the school should be tastefully arranged and carefully tended; carelessness in this respect may nullify all our efforts, for without a real love of nature all nature study is unprofitable: a mere book knowledge is worse than useless. All specimens should be handled with reverence, and the most important lesson of all will have been learned. The study of passages from Wordsworth, Tennyson, and other modern poets who were close observers of nature, will add a new interest to the subject. Actual work out of doors is of course controlled by difficulties of time-table and organization. Excursions into the country are generally impracticable, but the organized "Nature Rambles" for the exploration of meadow, pond, woodlands, &c., which are conducted in some schools, as part of nature study proper, cannot fail to have a beneficial effect on the art work of the school.

It is unnecessary here to do more than refer to the help art receives from history, literature, mathematics, science, and other subjects. Indeed most school pursuits help, and are in turn helped by, the wide issues which are involved in a right conception of art teaching. A school Art Society should be formed. Meetings will be held at regular intervals when work done out of school is exhibited and criticized. Special out of school classes can be arranged: students paying for the cost of materials. These classes will be run more on art school lines, and should cater for the specially gifted who may be destined to take up trades and professions in which design is of importance. Every freedom should be allowed to the students as to choice of work and media. Keen members of the society will readily

undertake the collection and classification of pictures, press cuttings, &c., for use in the school and will thus render much needed help to the art master. The production of well-designed school notices will do something to help to spread the influence of art through the school.

The World outside the School. Among the aids to classroom work outside the school the consideration of the home, its design, furniture, and decoration, must take the first place, and though many things in the average home must be used as examples of what is to be avoided, yet care must be taken that no destructive criticism is allowed unless it is followed by constructive suggestions. From the domestic dwelling the student will be led to the consideration of the public building and the town. For schools so fortunately situated as to be near one of the more successful town planning experiments, nothing could be more useful, or more conducive to the achievement of proper aims of secondary school art work, than a discussion on the ethical and aesthetic principles of town planning, followed by a visit to the model village or garden suburb, when the teacher will point out the importance of the central square, the arrangement and design of the public and domestic buildings. This could usefully be followed by a walk through a typical example of the Victorian street, when the students will be brought to realize the depressing effect of the ugly rows of houses. If our future public men were trained in this way there would be little danger of a repetition of these atrocities. They will insist on improvement in design whenever and wherever opportunity arises, from the lamp post to the town hall, and let it be remembered that beauty is not necessarily more costly than ugliness. There is an enormous field for improvement in all our big cities. Much of their ugliness is only a temporary phase through which it was perhaps necessary to pass. The truth is that we have not yet been town dwellers for long enough to have acquired the art of city life. Our cities are in embryo, and are ugly because they are incomplete. Lectures in the classroom on the Greek Orders should be followed by visits to such examples of their use in public buildings as may be within reach. It should be made clear that this is not to encourage revivals. It is a mistaken use of our historic knowledge to put a bad copy of the Erechtheum in the Euston Road and call it St. Pancras Church. The clumsy copies of the Caryatides blackened with London soot gaze helplessly across at the Doric entrance to Euston Station, reminding one sadly of the glory of the Parthenon which was watched over by their insulted prototypes. How clumsy are the copies can easily be seen by any one who takes the trouble to walk to the British Museum and compare them with one of the originals which we are fortunate enough to possess. This is not the use but the abuse of historic study and a legacy to us of a time when style was worshipped and considerations of appropriateness forgotten. In a humbler sphere, the house agents who advertise oak beamed country houses are catering for an unhealthy popular taste for the picturesque which sometimes leads to an entirely vicious make believe. Worse still! we have school chapels in Gothic of galvanized iron, with coloured paper imitating stained glass filling the meaningless mullions of the windows. We cannot at present escape these vulgarities: the teacher must use them as examples of the depths to which an uneducated taste can descend.

Much can be learned, both of what is to be avoided and what encouraged, on a railway journey or a shopping expedition. Students should be encouraged to record their impressions of these things and discuss them in school. In a shop window near the school the boys may have noticed a gas fire of imitation logs made of asbestos. A discussion will be started on the desirability or otherwise of this arrangement: reference will be made to other shams and pretences, and finally the class will design a gas fire. The writer was recently waiting for a train at Peterborough when he was struck by the beauty of a row of posters; on examining them more closely he found that they were

advertisements for French railways. This gave an opportunity for a useful discussion in school on our hoardings and the superiority of French work.

Finally something must be said about visits to museums and galleries. It is quite impracticable for most schools to arrange these visits in school hours, but the fortunate exceptions should make full use of their opportunities. For the rest students should be encouraged to go voluntarily in out-of-school hours to hear the lectures by the official guide lecturer, or where they will be met by the art master. The attitude of the teacher towards the museum is of the first importance. The Elgin room may be to one man a collection of broken stone dolls, and to another these dolls may be instinct with the spirit which made the modern world. What a lesson in history and racial characteristics it is to come suddenly from the "Theseus" of the Parthenon to the colossal bust of Thothmes III in the Egyptian gallery. The one expressing the freedom and beauty of the individual and the birth of the modern spirit, the other the submerging of all individuality in the mystery and majesty of a symmetrical convention. We might put beside the "Theseus" the Adam of the Sistine Chapel as expressing the rebirth of the same spirit with how much added. Our students can be brought to realize something of this, and it is from this attitude that our museum study will be useful rather than through a dry catalogue of facts and figures. The students should frequently be allowed to wander at will and to look at what interests them, to choose what they think best, and to give reasons for their choice. The museum is put before the picture gallery because the individualized art of the easel picture is of far less importance in the training of the ordinary citizen than the products of the collective mind which are to be found in museums. But the importance of the gallery is not to be underestimated, and we are fortunate in having in the National Gallery a collection which, for systematic arrangement illustrating the evolution of painting in Europe from the Byzantine style to the nineteenth century, is perhaps the best of all the world's great collections.

In conclusion, enough has been said to indicate the direction in which aids are to be sought. The term "drawing" does not fit the subject: "art" is not quite satisfactory: the French "*dessin*" is more appropriate. The old system of art teaching which was chiefly concerned with unintelligent copying has given place to one which has as its object the cultivation of observation, memory, and good taste, and in which the root idea is structure depending on function. Such teaching must of necessity bring to its aid many sciences. It follows that all our classroom work must be an appeal to the mind through the eye, and all our designs must have a purpose. The teacher must draw inspiration from any and every source which will help the student to an understanding of the relation between the classroom and the outside world, which, as Emerson says, is nothing but a Pestalozzian school where all are teachers and students in turn.

JAPANESE SCHOOL CHILDREN'S IMPRESSIONS OF THE PRINCE OF WALES.—Among the baggage brought home from the East by the Prince of Wales, surely none was so unusual as ten cases which were taken on board when the Prince was leaving Japan. These cases contained 10,000 copies of a special edition of the *Kyoto Himode Shimbun* in English, which consist, for the most part, of accounts of the Prince's visit written by school children of Kyoto. The presentation was made by the Elementary School Head Masters' Association of Kyoto for distribution among British school children, in the hope of promoting friendship and understanding between the younger generations of the two nations. Mr. Fisher, as the official representative of education in this country, has accepted the gift, and arranged for the distribution of the souvenirs. As he rightly says, much will depend in the future on mutual sympathy between the two nations, and there is no doubt that school children, and even their elders, will be keenly interested to know the impression which the Prince's visit has made on the children of Japan.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

International Students In the medieval University, the students elected their Rector and exercised in other ways a large measure of self-determination. It is pleasant to learn that University students of to-day intend to make their voices heard on questions of policy and administration affecting their interests. A National Union of Students has been formed with its office in the new building of the University of London Union in Bloomsbury. The National Union was represented at a Conference of Students' International Offices held at Leipsic in April at which the question of promoting international reconciliation was discussed. Professor Sir Bernard Pares writes in the *N.U. News* that, having followed foreign politics for a good many years, he has seldom heard of anything which gave him so much pleasure as the action of the National Union at this conference. "It was as much a satisfaction as the conference at Genoa was a disillusion." The relief of Russian students in grave distress received early attention and the resolution adopted has already been transmuted into substantial help. Among other subjects discussed was a scheme for student exchanges *au pair*, international identity cards for students, a proposed University Sanatorium in Switzerland, vacation tours, and cheaper passports and visas. Denmark has been selected for the next conference. The British delegation at Leipsic consisted of Ivison S. Macadam (London), Marjorie Thompson (Manchester), and Malcolm M. Thomson, B.A., B.D., Assistant Secretary of the National Union. At the office of the Union, students going abroad will be given facilities in the way of introductions and information which should encourage foreign travel as an essential part of a student's education.

New Graduates. Universities throughout the country have been conferring degrees. The new honorary graduates include many interesting and distinguished personalities, for example, at Oxford, Sir Alexander Mackenzie, Principal of the Royal Academy of Music, which has attained its centenary, and at Cambridge the Duke of York and Dr. Taft. Especially striking has been the large number of new graduates at provincial universities such as Liverpool and Birmingham. This is the result of the generous scheme of the Board of Education for assisting service students, a scheme described by the Principal of Birmingham (Mr. C. Grant Robertson) as a great and unprecedented experiment, which had many critics but in Birmingham had proved an unqualified success.

New Site for London University. The London County Council are still following a dilatory policy as regards the Bloomsbury site for London University. In July, 1921, and in the following February resolutions were adopted asking the Board of Education to consider the claims of Holland Park for the new University quarter. Both the Board and Treasury returned a *non possumus*. Before the war the Council resolved in favour of Somerset House or the south side of the river—anywhere apparently rather than Bloomsbury. The resolution adopted on July 11 shows alarm at Mr. Fisher's statement that the present Bloomsbury site was insufficient for the needs of the University "but it is a fragment of a fairly large estate which will, or may, come into the market, and over which the University can expand at leisure"; and the Council are to point out to the Board, to the Treasury, and to the Senate of the University that as this statement foreshadows "further heavy and quite indefinite financial commitments," the question requires further consideration. The reference back, moved by Sir John Gilbert and seconded by Sir Cyril Cobb, was lost on a show of hands by a small majority (38 to 32). Some interesting speeches were made but, notwithstanding, the policy of the Council remains obscure. Sir Cyril Jackson thought the Bloomsbury site too expensive and predicted that the authorities of King's College would not consent to the removal of the College from the Strand. As to the finance of the scheme, however, we are informed that "the Council has always maintained that His Majesty's Government is responsible for the provision of such site as may be needed for the full extension and development of the University of London" and therefore from the Council's point of view the question is purely one of educational policy. The attitude of the Council is the more exasperating because in October, 1920, it promised conditionally to consider an application for a building grant for the Bloomsbury site to an amount not exceeding one-third of the contribution made by the Government in respect of expenditure not exceeding £1,000,000.

The laying of the foundation stone by Lord Haldane for new buildings at Nottingham for the proposed East Midlands University is another outstanding event in the history of University education. Sir Jesse Boot has given the site, £150,000 for buildings, and £20,000 for a Chair of Chemistry. On the day of the ceremony another anonymous gift of £100,000 was announced. This is a good start which should encourage other great cities to show their faith in higher education. The establishment of new Universities is a question which requires fuller investigation than it has so far received. It is suggested that certain University Colleges should be allowed to grant their own degrees under the supervision of approved Universities, without themselves being given the status of Universities. The full details of the proposal have not been published, but the policy, if adopted, will constitute a novel departure. There exists a strong feeling that a purely external examination such as London University offers is educationally unsound for a University College. On the other hand, the proposed alternative that a College should award its own degrees under the supervision of a University is sure to meet with opposition.

WALES.

The University of Wales. The Annual Collegiate Meeting of the University was held at the University College, Aberystwyth, on July 19 and 20, and at the same time the College held its Jubilee Celebrations. Advantage was taken of the presence of so many people who are interested in higher education to unveil a memorial to the late Principal T. Charles Edwards, who was the first Principal of the College; and one of the pioneers of University Education in Wales. Meetings of the Court are usually of a very formal character, but on this occasion two or three subjects of general interest were discussed. A most interesting debate arose out of a motion by Dr. Stephens of Swansea, that University education should be free to all persons who are qualified to benefit from it. But it is obvious that under the existing financial conditions a proposal of this kind has not the smallest chance of being accepted, and the debate was in consequence of a purely academic character. In Wales the tuition fees are exceptionally low—in fact they are lower than in any other part of the United Kingdom—and in the aggregate only represent about 19 per cent of the total income, as compared with 34 per cent in England, and 30 per cent in Scotland. The present fees are, therefore, not a heavy burden on the students, and it may be doubted whether a single student of university calibre is debarred from entering one of the University Colleges by the magnitude of the fees, but as about 75 per cent of the students are obliged to live away from home, the financial strain upon them arises from the necessity of finding funds to pay for their maintenance. Remission of fees would only be a very partial relief to them. Dr. J. James, the Chief Education Official of Glamorgan, also initiated a discussion on the names which the University Colleges should adopt in future. He suggested that they should all be designated "University College of Wales, Cardiff, or Bangor," &c., but the proposal was rejected.

Good Honours Degrees. The University of Wales has decided to issue the Second Class Honours list in two divisions, and students whose names appear in the first division will be regarded as possessing a good Honours degree for the purposes of the Burnham Scale. Any student who has graduated previous to this year will be informed, on application to his College and to the faculty concerned, whether his second-class Honours degree is such as to entitle him to a "good Honours degree" in the opinion of the University. The final decision will be that of the Vice-Chancellor.

The Workers' Educational Association. The report issued by the Welsh district of this Association shows that considerable progress is being made. Eight week-end schools were held during the year in conjunction with the Workers' Trade Union Committee. Three were held at Swansea, two at Caerleon Training College, and one each at Llanelly, Port Talbot, and Briton Ferry. The total number of classes was fifty-seven, and the number of first-year classes was forty—a total of ninety-seven, an increase of forty-two compared with the previous year, and about 2,200 students attend these classes. Emphasis is laid on the great difficulties under which the classes were held owing to unemployment, and changes in working hours, but in spite of these obstacles, the classes were most successful, which may be regarded as a strong testimony to the educational enthusiasm of the workers. Of the subjects studied, economics and industrial history were

the most popular, while classes were also held in Welsh literature or history, philosophy, and psychology, and English and French literature.

Throughout Wales we hear the cry that the secondary schools are in a very difficult financial position.

School Finances. Local Governors seem unable, in some schools, to provide the funds to meet the minimum requirements of the schools for which they are responsible, and appeals are constantly made to the Local Education Committees for help. In the majority of cases it has been possible to effect a satisfactory arrangement between the two authorities, but in one or two of the counties Local Education Authorities have shown the strongest possible disinclination to make any sacrifices for education, so that the schools are left in a parlous financial condition. Cardiganshire, for instance, has been notorious for its unprogressive attitude towards all educational movements, and its lack of sympathy with secondary education. It is content with the abnormally low education rate of 4d. in the pound for secondary education, and its scale of salaries for teachers is the lowest in the country. It has broken faith with its secondary teachers, for it has refused to recognize the Burnham Scale, though it had previously agreed to adopt it. Discontent and unrest are therefore rife in the county. The Cardigan farmer, in his fastnesses, seems out of touch with all the progressive movements which affect the country generally. The financial position as a whole needs careful consideration and sympathetic treatment, otherwise Wales will be in danger of losing the advantages it is deriving from its well-organized system of secondary education.

The Welsh Department of the Board of Education is submitting to Parliament an amended scheme to confer on the Central Welsh Board the power of examining pupils in municipal secondary schools. Such pupils, however, must pay the full cost of the examination, so that this extra work will not entail any additional expenditure on the Central Welsh Board. It is also proposed that ex-pupils of the Intermediate Schools who have passed a First Examination, may be examined in an additional subject or subjects that may be necessary to enable them to qualify for a Matriculation or a Professional Preliminary Examination. Notices of objection should be forwarded to the Welsh Department before September 15th.

This school, which is largely a non-local school, is in dire financial straits. The governing body had previously applied to the Glamorgan County Council for aid, but as Cardiff sends 139 girls to be educated at the school, the County Council recommended the governors to apply to the Cardiff City Council, and the matter is now under consideration.

The Board of Education is refusing all applications for extensions of premises, and is also withholding its sanction to the establishment of new secondary schools in spite of the urgent demand for them in certain areas. In Monmouthshire, the County Council has failed to obtain the Board's consent to the opening of secondary schools, though the sites for them have been selected, at Chepstow, Rhymney, and Nantyglo. The same policy was also pursued with regard to the proposed new school in the Amman Valley in Carmarthenshire.

Mr. John Elwyn James, M.A., from the Barry County School, has been appointed to the head-mastership of the Canton Municipal Secondary School, and Miss Platt from the Rhondda County School, Porth, to the head-mistress-ship of the Welshpool Intermediate School for Girls.

SCOTLAND.

After a keen contest Mr. J. W. Critchley, Rector of Dumfries Academy, has been elected President of the Educational Institute for the coming year. The result is one on which both Mr. Critchley and the Institute are to be congratulated. In an ordinary year teachers might have been glad to have the women teachers represented by Miss Paterson, or the north country represented by Mr. Skinner. But the year is not an ordinary year. The Institute is confronted with difficulties within and without, and it needs a man of exceptional strength who knows the business of the profession thoroughly and is acceptable to all sections of teachers. It has got that man in Mr. Critchley. He can be trusted to conduct with capacity the important negotiations regarding salaries and superannuation that will have to be

carried through in the course of the year, and he may be able to arrest the disruptive tendencies in the Institute which have become increasingly marked in the last two years. It is an open secret that the activities of the Primary Teachers' Association, in conjunction with the rather disappointing scales of salaries secured in most areas for secondary teachers, have seriously imperilled the unity of the profession in Scotland and led to threats of a breakaway on the part of secondary teachers in the cities. The election of a distinguished secondary teacher to the presidency at the present critical moment is a fortunate circumstance, and may mark a return to a more wise and tolerant relationship of the several sections of the Institute membership.

In accordance with expectations Mr. Munro has introduced into the House of Commons the Education

Superannuation. (Scotland) Superannuation Bill to bring Scotland into line with England. The Institute, anticipating this, had issued to Scottish Members of Parliament and to the public, a reasoned statement in support of different treatment for Scotland. In this statement it is pointed out that from 1912 to 1919 the superannuation fund had been built up by contributions from teachers (4 per cent of salary bill), school managers (2 per cent), and the Education Department (approximately 4 per cent), and that the change to a non-contributory system in 1919 was not desired by anybody in Scotland but was made in consequence of the change in the English scheme a year before. "The Government," the statement goes on to point out, "now propose to deduct from teachers 5 per cent of salary for purposes of superannuation; and that within three years of destroying a sound contributory system. They propose to make this deduction on no good reason or principle, but simply on the recommendation of the Geddes Committee which had no educational authority to support it." Against such an indirect reduction of salary, two arguments are put forward: (a) The Teachers' Superannuation (Scotland) Act was passed in June, 1919. The Minimum National Scales of Salaries were agreed upon at a Conference in Edinburgh in August, 1919—that is, two months after the terms of the Superannuation Act were known. (b) The Minimum National Scales were agreed upon at a Conference between representatives of Education Authorities and representatives of Teachers, over which Sir John Struthers, Secretary of the Scottish Education Department, presided. At the Conference Sir Arthur Rose, on the side of the Authorities, submitted a table showing the advantages of the new Superannuation Scheme, and those advantages were fully taken into account when the scales of salaries were being considered and finally adopted. Curiously enough, no mention is made of what is after all the fundamental difference between the Scottish and the English systems: that Scottish salaries being determined in accordance with a minimum national scale are subject to deduction of salary in so far as in any county they exceed the minimum. In actual fact such deductions are at the moment being made, and in consequence, if the Bill passes, Scottish teachers will be ground between the upper millstone of the Treasury and the nether millstone of local economies. In spite of the strength of the case of Scotland for special treatment, escape from superannuation contributions is not expected by teachers. The most that is hoped for is some mitigation of the position. From a hint thrown out by Mr. Munro in the second reading debate it seems as if a clause were likely to be inserted in the Bill enabling the authorities if so disposed to undertake the payment of part of the 5 per cent contribution on behalf of the staffs. Whether in their present economical mood any of them would be so disposed is doubtful, but at any rate they would be compelled to take into account the total effect of the reductions being made in teachers' salaries.

The movement in the direction of salary reductions initiated by the Glasgow Authority has spread over the country, and there are few authorities which are not announcing an arrangement with their teachers for lower salaries in the interests of the ratepayers. The collapse of resistance to reduction in Glasgow has made this easy elsewhere. Unfortunately Glasgow teachers, after deciding in a delegates' meeting to stand together and have the business settled by collective bargaining, then made a most pusillanimous rush for safety by signing the agreement for lower payment sent out to them as individuals. Even the five hundred teachers who maintained the dignity of the profession by standing out and refusing to sign, on the ground that all negotiations ought to be conducted through the Institute, finally succumbed on receiving a vague promise that the amount of the reduction would be re-considered if and when the Scottish Superannuation Scheme was made contributory. The only redeeming feature in the general situation, apart from the fact that elsewhere conflict has been

avoided, is that the defects of the Glasgow method of a uniform percentage deduction on all salaries has been realized by other authorities and an effort has been made to differentiate between better and worse paid teachers. A common procedure has been to levy toll on the part of salary in excess of the national minimum and to exempt salaries below £200. But the great variety of practice in regard to reductions amply confirms the contention of the Glasgow teachers that any change in salary schemes ought only to have been after careful negotiation between the parties concerned. Indeed some attempt should have been made at establishing a common policy for Scotland. The machinery for national negotiation in matters of this kind exists ready to hand in the Joint Council of teachers and authorities. Why did the teachers not appeal to this Council instead of letting themselves be hustled into being parties to hastily devised and ill-considered schemes of reductions? It looks as if the Institute had been so much pre-occupied with the Parliamentary position that it was taken unawares by the local economists.

The provisions in the omnibus Economy Bill affecting Scottish Education have so far been apathetically received. The authorities, it is reported, are rather upset by the proposed changes in the method of calculating educational grants and mean to interview the Scottish Secretary if the Bill is to be pushed forward just now. But teachers, and the public generally, are either too much in the holiday mood or have had enough of educational discussions for the time being and seem disinclined to concern themselves with it. With this state of mind prevailing the import of the clause relating to the payment of fees in primary and secondary schools is likely to be missed. The Act of 1918 required every authority to submit a scheme for the adequate provision of all forms of primary, intermediate, and secondary education in day schools without payment of fees. In other words, it made secondary education free of cost throughout the land. The Economy Bill eviscerates this vital clause by proposing that adequate provision for education without payment of fees with respect to education other than primary shall be deemed to be made if there is a reasonable exercise of the authorities' power of granting assistance to individual children and young persons. This is simply an "As-you-were" order.

The resolution of the St. Andrews Court to economize by appointing a lecturer in Education at £500 per annum instead of a professor at £800 is a serious blow to educational science in Scotland. Doubt has been raised as to the competence of the University to suspend the operation of the ordinance relating to the Bell Chair of Education in this off-hand fashion, and there is talk of an action for interdict. But whether the decision of the Court is *ultra vires* or not, teachers, especially the considerable number of them who are St. Andrews graduates, should protest against a course of action so detrimental to the standing of their professional studies. The Universities have always been inclined to treat their teacher students as step-children, and the only thing that will save the situation in St. Andrews or elsewhere is a clear intimation on the part of the teachers in the General Council that they will not tolerate any diminution in the facilities given for higher learning in pedagogy. The reason given for the non-appointment of a professor is the smallness of the Education classes in St. Andrews and Dundee. That is a dangerous argument for St. Andrews itself. If mere size of class is of so much account there will have to be more professorships cut down. But in point of fact it is a hopelessly bad reason. If in the past the classes have been small, that is the fault of the University itself which has failed to make the arrangements which would bring in the students. By proper co-ordination of the University classes with those in the Training College and by the provision of facilities for young teachers engaged in the Dundee schools, the number of students would be largely increased. If economy is desired the professor of education in St. Andrews should be at the same time lecturer on education in the Training College. The present duplication of teachers in the two institutions is indefensible on any ground.

In pleasant contrast with the state of matters in St. Andrews, is the evidence afforded of the prosperity of Education as a University study in Edinburgh by the list of those who have just graduated Bachelor of Education. Considering that the B.Ed. is a post-graduate degree, which has not as yet any very obvious commercial value, it is highly creditable to the education department of Edinburgh University that there should be so many as seven graduates. It is an interesting fact that one of

those graduating Doctor of Philosophy was a Chinese student holding the B.Ed. degree and submitting a thesis on an educational subject. Why, by the way, have there been no graduates in education in the other three Universities? Is it connected with the fact that in two of them there is not a chair in the subject, and that along with that goes insufficient staffing? There is something wrong when a centre like Glasgow with hundreds of education students lags behind in the academic recognition of education.

IRELAND.

The Intermediate Examinations have been unfortunate this year in getting mixed up with political events. **Examinations.** They were postponed for a week on account of the Parliamentary elections in the Free State, and on the concluding day, June 28, the civil war broke out in Dublin, the country districts were cut off from the capital, and not only had many of the centre superintendents difficulty in reaching their homes, but it was impossible for them to get the examination answer books to the education office in Dublin except after much delay. The result will be some delay also in correcting the answers and in issuing the results of the examinations which may not be ready in time for the reopening of the schools in September. The outbreak has also upset the educational arrangements for July, most of which had to be postponed — some of the examinations are to be held in August and September, and dates for others are yet to be announced.

The new Ministry of Education has begun badly with its arrangements for Intermediate Education for the coming year, 1922-23. There were many and loud complaints against the Intermediate Board in previous years, when for various reasons the Rules and Programme for the coming session were late in appearing, and especially if they were not issued until the summer vacation. When issued they were, however, definite and complete. This July the Ministry of Education has issued in a four-page leaflet a statement of changes which "will probably be sanctioned as part of the Programme for the Intermediate Examinations, 1923." Radical changes are made in the courses in Gaelic (Gaelic or Irish), English, and modern languages, but not in Latin or Greek. The usual method of prescribing in the Junior Grade a selection of English poems not contained in any anthology has always resulted in the publication of one or more special editions containing the selected poems, but this summer the Irish publishers hesitate to follow their usual practice, in the absence of any certainty that the poems will not be changed, so that when the schools reopen in September there will probably be no edition of these poems ready for use. In the Middle Grade a poem is put down (probably) which has for some time been out of print. Was this unknown to the Ministry? Other statements in the leaflet are that "There will be examinations in the usual three Grades, with Pass and Honours, and Exhibitions and Prizes as before"; "Geography and History will no longer be included in the course for English. There will probably be a Pass subject, History and Geography, in addition to the present Honours History and Historical Geography"; "There will be changes in certain other subjects, such as Domestic Economy, Drawing, and Music, but as these changes will be of minor importance, particulars will be issued at a later date." In Greek and Latin, apart from the changes in set books, the courses will remain as in 1922, and the set books follow the familiar lines, except that a number of new Anglo-Irish writers are introduced for the first time, and the criticism may be made that in the Junior Grade the English authors as a whole can hardly be said to be of the first rank.

In modern languages (apart from English), a sweeping change is introduced. No set books are anywhere prescribed, and in the Junior Grade Pass and Honours and in the Middle Grade Pass translation into and from the language will not be required. Free composition and passages in the language to be used as a basis for further exercises, such as the explanation of words, re-writing the passage with different persons, tenses, &c., are given a large place. Is it an intentional part of the policy of the new Ministry of Education that the teaching of modern language is to be divorced from literature and all that good literature embraces as a means of culture and an initiation into European thought? If so, it is a very serious step, involving as it may well do that the great majority of Intermediate pupils, many of whom will never set foot in a foreign land, will never have been even introduced to the wealth of contents embraced in French, or German, or other foreign modern literature.

In Middle Grade Honours, and Senior Grade Pass and Honours passages for translation will be set but as in previous years there will be no prescribed books, the choice of authors being left to the teachers and the schools. Of other subjects, such as mathematics, science, book-keeping, &c., no mention is made at all. But what is more important, under what Rules will the schools be working? Will the conditions of passing and obtaining honours be the same as heretofore? What returns will be required from the schools? And what grants will they receive, of what amount, and under what conditions? The Ministry of Education must accept responsibility for these shortcomings, as it is known that the Intermediate Education Board had quite early in the year prepared rules and programme for 1923, and certainly in view of the much wider changes contemplated for 1924 it would have been better to allow the old system to remain without change for another year.

The National University of Ireland has issued a notice for Matriculation candidates for the present

Matriculation. Those candidates who have entered for the Senior Grade Intermediate Examination with a view to matriculation upon its results are advised to enter provisionally for the autumn matriculation, pending the publication of the Senior Grade Intermediate Examination. The late date for entering is August 5 (or, on late entry fee, August 12). No student can begin his course of lectures leading to a degree until he has completed his matriculation, and a student intending to proceed to a degree must obtain a certificate of Matriculation from the Registrar of the University before entering a constituent or recognized College. Students who desire to be registered as Matriculated students on the results of outside examinations, must apply to the Registrar in Dublin.

The Queen's University, Belfast, and Trinity College, Dublin, were both busy during the civil outbreak in conferring both ordinary and Honour degrees, Trinity conducting its business as though outside her gates no armed and violent conflict were in progress. The following list of names receiving degrees in Belfast on July 11 is the longer and full of interest. The degree of LL.D. was conferred on Field-Marshal Sir. H. Wilson before his death and he should have been present for the formal ceremony on the 11th. The LL.D. was also conferred on Sir Jas. Craig, the Prime Minister, Mr. R. M. Jones, M.A., Head Master of the Royal Academical Institution, Mr. J. Miller, Chief Engineer of the Great Eastern Railway, Prof. J. L. Smith, F.R.S., of Edinburgh University, Mr. R. Stanley, Principal of the Belfast Municipal College, Sir R. Wallace, Chairman of the London Sessions; the D.Sc. on Prof. G. A. J. Cole, F.R.S., and Mr. R. L. Praeger, Chief Librarian of the National Library; and the D.Lit. on Mr. W. B. Yeats, the well-known Irish poet and dramatist.

REVIEWS AND MINOR NOTICES.

EARLY CHRISTIANITY: THE COMPOSITION AND PURPOSE OF THE ACTS OF THE APOSTLES.

The Beginnings of Christianity.—Part I. The Acts of the Apostles. Vol. II. Prolegomena II. Criticism. Edited by Dr. F. J. FOAKES-JACKSON and Dr. KIRSOPP LAKE. (24s. net. Macmillan.)

The second volume of the large work edited by Prof. Foakes-Jackson and Kirsopp Lake on "The Beginnings of Christianity" has followed the first without any great delay. On the whole it seems to us to be a more satisfactory production than Vol. I—the material is presented with care and fairness. The editors are still, it must be remembered, engaged on Part I of their work, this section being devoted to "The Acts of the Apostles." It looks as if Part I alone would embrace four large volumes, two of which have already appeared. The work is being carried through on a scale, and with a thoroughness, never before attempted in English.

The volume under review deals with three main themes: (1) the composition and purpose of Acts; (2) the identity of the editor of Luke and Acts; and (3) the history of criticism. Under each of these heads there are sections, devoted to the consideration of different aspects of the themes, which are the work partly of the editors themselves and partly of other scholars. Thus (1) includes

contributions by Prof. Burkitt ("The Use of Mark in the Gospel according to Luke"), and by Mr. W. K. Lowther Clarke ("The Use of the Septuagist in Acts"). Under (2) the case for and against the traditional view that Luke wrote both the Gospel and the Acts is presented by Mr. Emmett and Prof. Windisch respectively. Mr. Emmett's essay strikes us as being a very clear and valuable discussion. He frankly faces the difficulties of reconciling *Acts* and *Galatians*, and contends that "these difficulties disappear almost entirely if the three points for which we have argued can be made good: (1) that Acts xi. and Galatians ii. refer to the same events; (2) that Galatians was written to the Churches of South Galatia; (3) that it was written before the Council of Acts xv." In this way two interesting results are confirmed, viz. that the composition of *Galatians* is to be placed much earlier than was formerly supposed, and that the South Galatian theory is true.

The writer thus sums up:

One result at least stands out; Acts is independent of the Epistles. It neither uses them nor corrects them in such a way as to suggest that they are before the writer. On the other hand, there is a sufficiently remarkable general agreement in the picture of early Christianity, in the doings of Paul and his companions, and in the conception of his work and teaching. It is true that there are also apparent contradictions, but these are mainly on minor points; if the suggestions suggested . . . be borne in mind, they do not affect the general credibility of Acts, or destroy the possibility of its coming from a companion of the apostle.

Windisch's essay does not, we think, destroy the cogency of Mr. Emmett's discussion.

Two valuable essays at the end of the book deal with the history of Criticism as regards Acts in Germany and England. At the end of the volume, as illustrating the process by which an historical personage grows and develops in traditional presentation, two appendices are devoted to the story of St. Francis (by Mr. G. C. Coulton) and that of Margaret Catchpole (by Dr. Foakes-Jackson).

THE EVOLUTION OF PHILOSOPHY.

A History of Social Thought. By Prof. E. S. BOGARDUS. (University of Southern California Press.)

This solid volume of 500 pages justifies its claim to present a satisfactory background against which to project our thoughts on social subjects. Its author modestly says that it is written for students, and must accordingly not be taken as the last word on any of the matters treated. But even the best-qualified specialist on any branch of social thought would learn something by reading this mass of organized matter. In a general way Dr. Bogardus treats his subjects in their historical order, beginning with primitive man and ending with the current discussions. But he has a way of sometimes isolating one particular aspect and working that out along a chronological line of its own. For example, "Utopian Social Thought" includes the fanciful social organizations of all periods. So with "Individualistic Social Thought" and whichever subject lends itself to this departmental treatment. It would appear that repetition would necessarily result, but the arrangement is so good that no repetition occurs beyond what is absolutely necessary to impress firmly the true relationship among the different aspects. The book parallels in exposition what has taken place in actual development: i.e. there is a big broad general evolution and at the same time a fluctuating ebb and flow within certain areas.

Naturally, written from the American standpoint, the book takes full account of our English contributions. Mr. Graham Wallas, for example, gets sympathetic treatment, and Mr. Macdougall is paralleled with Prof. E. A. Ross in a way that is both interesting and illuminating. Most English readers will be surprised at the prominence given to Dr. Lester F. Ward, but those who are familiar with American thought will not be surprised at finding a whole chapter devoted to this writer. The last five chapters

are of special value to us on this side as giving a clear idea of certain movements with which we are very imperfectly acquainted. The problem of the possibility of Christianity being applied as a *working* scheme of social organization is worked out in a very effective way. Dr. E. Lyttelton will find here support for some of the views that he presents in his "Letters on Education." Naturally enough, Dr. Bogardus has a chapter on "The Rise of Educational Psychology," a chapter that will be of special interest to the readers of this Journal. But the interest of teachers will not be limited to special references: the whole book is full of matter that affects our work at all points. Indeed it makes a singularly powerful appeal to the thoughtful person who objects to ordinary philosophy because of its unpractical character.

WRITINGS OF SIR FRANCIS PALGRAVE.

The Collected Historical Works of Sir Francis Palgrave, K.H. In Ten Volumes. Volume VIII, *Truths and Fictions of the Middle Ages*: (1) *The Merchant and the Friar*; (2) *Three Generations of an Imaginary Norfolk Family*. Volumes IX and X, *Reviews, Essays, and other Writings*. In Two Volumes. Edited by Sir R. H. INGLIS PALGRAVE. (42s. net each. Cambridge University Press.)

The work of piety which Sir Inglis Palgrave undertook in honour of his father is now accomplished. The three fine volumes before us complete the set of ten, in which are comprised the Collected Historical Works of Sir Francis Palgrave. Sir Francis was a pioneer of that school of scientific historians who turn to original documents as the prime sources of their information, and who shake off the trammels of tradition in their efforts to discover the truth. Of course, after so long a lapse of time, most of Sir Francis's judgments have had to be revised. Nevertheless it is possible to contend that the revision is necessitated only because subsequent investigators have pursued the methods which Sir Francis inaugurated.

Under the title "Truths and Fictions of the Middle Ages" Sir Francis endeavoured to revitalize the medieval period by means of a sort of historical novel. He was not very successful for, with all his scholarship, he lacked the quickening imagination of the romancer. His "Merchant and Friar" is a laborious and rather dull reconstruction of medieval society out of materials supplied by records and chronicles. It would not be correct to say that Sir Francis's fictions are now recognized as truths, but it would be not far wrong to assert that most of his truths are now known to be fictions. This, indeed, is admitted by Mr. Hamilton Thompson, who contributes a very able and scholarly introduction to the text.

Volumes IX and X, edited with much care by Mr. H. E. Malden, contain a selection of the numerous introductions and articles written at different times by Sir Francis, whose energy and fertility were prodigious. The expediency of reprinting some of these is doubtful. They are almost too much out of date to be tolerable. One—on Popular Antiquities—actually appeared the year before the Battle of Waterloo. It seems almost cruel to recall this, and one or two others, from the merciful oblivion into which they had duly sunk. The editor's conscientious notes, however, do something to safeguard readers from the perils of the text.

CLASSICS.

Petronius: Leader of Fashion. Translation and Notes.

By J. M. MITCHELL. (8s. 6d. net. Routledge.)

This translation is excellent; sound scholarship and a racy English style have enabled Mr. Mitchell to produce a version of a very remarkable book which does not read like a translation at all. The notes, too, of a non-academic nature, are well calculated to furnish the general reader with all the information about the ancient world which is necessary to render a passage intelligible. There is a long introduction of fifty pages, in which Mr. Mitchell discusses the question of authorship, and inclines to identify the Petronius of the *Satyricon* with the

elegantiae arbiter of Tacitus, and maintains, very plausibly, that the picture of Trimalchio could not have been drawn without having Nero in mind. But there is also a section upon translation which raises very controversial matter. Before the war Mr. Mitchell was teaching Classics in a modern university to those who had little or no Classical training, and he became convinced of the inadequacy of the usual method of presentation in Classical teaching. He wanted something to make the ancients *real* to his pupils, to bring them home to their hearts as living people, and so he began this translation. The inference is that he intends to feed those who found Virgil and Cicero uninteresting upon Petronius, and it is here that we must part company with him. As he himself admits, after more than five years in the army, "I think it would be fair to say that no kind of training produced a higher average of versatility in the citizen army than the old classical curriculum of the public school and the university" (p. xvi). A generation brought up upon Petronius and his like would never deserve such a remark. There is plenty of room for improvement in our Classical teaching, and Mr. Mitchell will do us a good service if he brings his remarkable expository powers to bear upon the presentation to a modern audience of one of the more ideal Classical authors. The present work is, as we have said, excellent, but it is not for the young. There are printer's errors on pp. 97, 103, and 144.

ECONOMICS.

Getting and Spending. An Introduction to Economics. By LETTICE FISHER (Mrs. H. A. L. FISHER). (2s. 6d. net. Collins.)

Mrs. H. A. L. Fisher, who appears to possess that rare gift of making difficult things plain to children's minds, has written a very interesting little book on the elements of economics. She has succeeded in covering the whole ground in 203 pages, and it is needless to say that her treatment of the subject-matter is all that could be desired. She gives a clear account of economic terms, and shows the bearing of economic theory on the practical problems of life. But we should be inclined to say that her book is a "Reader" rather than a "Text-book." A text-book depends for its value on the way its subject-matter is set out. It prints in bold type paragraph headlines and marginal notes, and contains a serviceable index. Mrs. Fisher's little book has none of these things. It is true that she has provided a table of contents in the form of a summary. But this in itself will hardly suffice to make her small treatise useful as a text-book. This is a pity, since for so excellent a production it would have been well worth providing the outer trappings, as it were, of a useful handbook for beginners.

An Introduction to the Principles of Industrial Administration. By A. P. M. FLEMING and H. J. BROCKLEHURST. (3s. 6d. net. Pitman.)

Students of Descriptive Economics will find this little introduction to the principles of industrial administration of immense value, giving, as it does, a great deal of useful information about all aspects of industry—its historical development, its organization, and how it is carried on, both on its commercial and manufacturing side. The book may be especially recommended to those teachers whose business it is to impart "General Knowledge." The information has been carefully selected and is skilfully conveyed. The two chapters on the organization of a factory deserve special mention for their excellence.

EDUCATION.

The Play Movement in the United States. A Study of Community Recreation. By DR. CLARENCE E. RAINWATER. (The University of Chicago Press.)

The play movement in America has produced a considerable literature, some of which has been noticed in our columns during the last few years. Some indication of the nature of the movement is afforded by the fact that Dr. Rainwater, the author of the volume before us, held the offices of instructor in Playground Administration in the University of Chicago and director of a playground and recreation centre in that city. No such offices exist in this country. Since the Playground Association of America was formed in 1906, great progress has been made. What we have to learn from America is that in congested cities space must be provided for play, and that people have definitely to be taught how to play. We have begun to see that play has been a neglected factor in the education of the masses, but even yet we have not grasped the significance of play, for grown-ups as well as for children, as an antidote to the social ills of the great city, and as a relief to the tedium of rural life. Such books as Dr. Rainwater's

should help us. He traces the play movement from the "sand garden" stage to the "community service" stage, and shows in detail what the movement is doing for American life. The book is well illustrated, and contains a large amount of clearly arranged information on the subject.

The Growing Girl: Her Development and Training.

By Dr. EVELYN SAYWELL. (1s. net. Methuen.)

Originally given as lectures to parents and teachers, the three chapters of which this little book consists deal in so sensible a way with the upbringing of children that we are not surprised at the request of some of the audience that the lectures should be printed. Mrs. Saywell acknowledges her indebtedness to Dr. Crichton Miller, who writes a preface to the book. Indeed, readers of Dr. Miller's "New Psychology" would have observed the indebtedness in any case. The usual snares which beset writers on the subject are avoided by Mrs. Saywell, and her book will be useful to many who have neither the time nor the desire to attack the larger treatises.

ENGLISH.

True Stories of the Water Folk. By M. MARLOWE. (2s. 6d. net. Harrap.)

Based mainly upon the direct observations of the writer, these stories are told in such simple language that quite young children may read for themselves the instructive adventures of Sammy Stickleback, Fanny Frog, Susie Spider, and the rest. The print is clear and large, and the illustrations fair.

Chambers's Narrative Readers.—*The Travelling Companions, The Marsh King's Daughter, and The Elf at the Grocer's.* By HANS ANDERSEN. (4d. each. Chambers.)

These neat, paper-covered, clearly-printed booklets, with their effective illustrations, can count upon a welcome in our needy schools, where, it is to be hoped, no children are allowed to grow up ignorant of Andersen.

Black Beauty: A Story of the Ups and Downs of a Horse's Life. By ANNA SEWELL. (1s. 6d. net. Jarrold.)

We rejoice to see a reprint of this artless and appealing story of the ups and downs of a horse's life. We can well believe, as the preface asserts, that it has done more than any book in the world to teach people to love and care properly for horses. The author seems to have possessed an intuitive understanding of the fears and the sufferings of dumb creatures, and all country children, at any rate, ought to be made acquainted with her work.

Literature Teaching in Schools: A Manual of Matter and Method. By J. EADES. (4s. 6d. net. E. J. Arnold.)

It appears that this work is destined for teachers in elementary schools or in the lower forms of secondary schools. Surely elaborate abridgments of masterpieces like "Martin Chuzzlewit," "Shirley," "The Talisman," and "The Lay of the Last Minstrel" are ludicrously out of place, as the teacher must have the original volume himself to work from. A large portion of the book is devoted to such outlines of well-known poems and novels, useless to any self-respecting teacher who might have been grateful for the hints on methods of teaching in Part I. One would have imagined that a more distinguished representative of present-day writers could have been chosen to figure beside Newbolt and Kipling than the one selected (p. 110). Many of the poems suggested for little children seem rather trivial.

GEOGRAPHY.

Arnold's Modern Geographies.—III.—*Europe.* Including a Short Summary of the Asiatic and African Lands of the Mediterranean. By A. A. DAVEY. (9d. Edward Arnold.)

This little book of ninety-six pages is clearly printed and carefully arranged in paragraphs. As in the other books of this series, the political division is taken as the unit. The new countries of Europe are briefly described in separate sections. The official name of Yugoslavia is not mentioned, and the comparison of the shape of Czechoslovakia to a "tadpole seen sideways" might with advantage be omitted in the next edition.

Industrial and Commercial Geography: With Special Reference to the British Empire. By A. RADFORD. (3s. 6d. net. Collins.)

The writer of this book is a man of ideas and broad outlook, and he applies the science of economics to the study of commercial geography. Too much matter, however, has been condensed into the small space of three hundred pages; the sections on the physical features and climate of the world (pages 41-60) and of the British Isles (pages 77-79) might have been omitted in order

to leave more room for the main thesis of the work. The chapters on The Leadership of the World, Transport, and Migration are particularly good, and throughout the book stress is laid on the distribution of population and the causes which have led to certain areas being densely populated. At the end of each chapter is a set of exercises intended not only to test what has been learnt but also to suggest problems for further study.

The Human Geographies, Secondary Series.—Book II—*The Atlantic Hemisphere.* By J. FAIRGRIEVE and E. YOUNG. (3s. Philip.)

The plan of this book closely follows that of the first volume of the series. Out of eighteen chapters in this volume three are devoted to Africa (with special reference to the Nile Valley and Southern Africa), one to the Atlantic basin, and ten to a somewhat detailed description of North and South America (including the lands on the Pacific as well as on the Atlantic seaboard). The authors are very successful in making the Human Geography the dominant note throughout the work and in discussing man's activities in relation to his environment. Many sketch maps and diagrams illustrate the text.

A Progressive Course of Comparative Geography on the Concentric System. By P. H. L'ESTRANGE, B.A. (15s. net. Philip.)

Mr. L'Estrange's well-known "Progressive Course of Comparative Geography" has been thoroughly revised and brought up to date. The complete work, now ready for use, provides a two years' course of study, and in all sections of the book human geography is strongly emphasized, especially with regard to the influence of environment on man's progress. Historical and economic geography are also constantly referred to. The text is profusely illustrated with maps (many of them in colours), diagrams, and pictures. For so excellent a production the price is remarkably low. It may be noted that this Geography is also published (a) in six separate parts, each of which is intended for one term's work, (b) as a text-book only (without illustrations), and (c) as an atlas of comparative geography, the maps being bound up separately.

Philip's New School Atlas of Comparative Geography. (3s. 6d. net. Philip.)

This attractive Atlas can be recommended for use in the middle forms of secondary schools. The political and physical maps appear on opposite pages, so that they can be readily compared. Throughout the Atlas the maps are effectively coloured, and on the orographical maps the contour lines are drawn with great clearness. There are also many useful sectional maps of the large land masses, such as Central Africa and the Nile valley.

HISTORY.

The Spirit of Our Laws. By HERMAN COHEN. Second Edition. (9s. net. Heffer.)

This is the second edition, thoroughly revised, of a book originally published in 1907. It is intended to give a sketch of the British judicial and legal system adapted to the needs of non-professional readers. It is an excellent introductory survey for all who intend to enter the ranks of the law, or expect to be called upon to play a part in public life.

Heroes of All Time: George Washington. By ADA RUSSELL. (2s. Harrap.)

Messrs. Harrap's "Heroes of All Time" Series now comprises nearly thirty volumes. Of these Miss Ada Russell has written the biographies of Alexander the Great and Julius Caesar. She now presents George Washington, and she has succeeded in giving a vivid and sympathetic outline of his career. A notable feature of this volume is a sixty-page appendix of extracts from Washington's writings.

Britain as a European Power. By A. BROWNING. (3s. 6d. net. Collins.)

Mr. Browning's idea is a happy one. It is "to bring out the connexion between Britain and Europe." He treats of British affairs in so far as they have had Continental relations. Beginning with Britain as part of the Roman Empire, he concludes with Britain as a member of the anti-German Alliance in the war of 1914-18. Teachers will find Mr. Browning's treatment of his theme full of suggestion.

History Assignments under the Dalton Plan. By E. I. SIDLEY. (6d. net. Bell.)

These model assignments are reprinted, with additions, from the *Times* Educational Supplement. They will be found useful by teachers who are required to adopt the Dalton Plan without knowing what it is.

The Expansion of Europe: The Culmination of Modern History. Third Edition. By RAMSAY MUIR. (12s. Constable.)

This third edition of Prof. Ramsay Muir's "Expansion of Europe" is much more than a revision of the two editions which appeared during the period of the war. The latter half of the book has been rewritten in the light of recent evidence, and the story has been carried down to the Treaty of Versailles. Of the unchanged early sections of the work it is not necessary to say anything on the present occasion: they are widely known as an excellent summary of the colonizing activity of the European peoples from the time of Columbus onward. The new sections contain vivid narratives of the imperial causes of the Great War, and acute discussions of the peace settlement. Prof. Muir has no sympathy with those who seek to exculpate Germany. "The vaulting ambitions of Germany, and her visions of world-power," he says, "had thus forced upon the world a desperate struggle, in which the destinies of the whole globe were involved." Again: "The dreadful conflict of 1914-1918, which drew almost the whole world into its vortex, and nearly brought about the downfall of civilization, was ultimately due to the insane ambitions of a single power." It is well that this truth, which some are inclined to deny, should be strongly emphasized.

MATHEMATICS.

The Fourth Dimension Simply Explained. With an Introduction and Editorial Notes by Prof. H. P. MANNING. (7s. 6d. net. Methuen.)

This is a collection of twenty-two essays selected from the 245 submitted in a prize competition held in 1909 for the best popular explanation of the Fourth Dimension. Prof. Manning, whose work on the subject is the most systematic and complete that has yet appeared, was one of the judges, and contributes an introduction to the collection. Naturally the essayists cover much common ground. They mainly concern themselves with the elements of the pure geometry of four dimensional space, with the question of its physical reality, and with methods of attaining some mental apprehension of this reality. There is evidence that the subject excites wide-spread interest, and the Einsteinian concept of the universe as a four dimensional continuum in which imaginary time plays the part of a dimension has recently stimulated still further the desire for enlightenment on these obscure matters. It is clear that these "tricks to try the stretch of human brain" occasionally do lead to something more valuable than "mere curious pleasure . . . or ingenious pain."

A Study of Mathematical Education, including the Teaching of Arithmetic. By B. BRANFORD. New Edition, Revised and Enlarged. (7s. 6d. net. Clarendon Press.)

The new edition of this somewhat amorphous collection of essays, studies, and notes of lectures on the teaching of mathematics, differs from the original one in the addition of a chapter in which the author discourses on a supposed loss of accuracy about the age of fourteen, on the desirability of mathematicians turning their attention to the problems presented by biology, economics, statistics, and finance, on the present position of geometrical teaching, and on other more or less closely related matters. For the sake of those who are unacquainted with the earlier edition, it may be mentioned that the writer's arguments are directed towards establishing two main propositions, viz. that the order of instruction in mathematics should follow the historical order of the development of the subject by the race, and that geometry should be the central subject to which all other mathematical disciplines should be related. There is, however, no systematic development of the argument, the aim of the author being apparently to stimulate research into these questions amongst those who are engaged in teaching. It is in many ways a suggestive and helpful book and may be commended to the attention of teachers anxious to extend their horizons.

MISCELLANEOUS.

The Everyday Life Series! I.—Everyday Life in the Old Stone Age. By M. and C. H. B. QUENNEL. (5s. net. Batsford.)

The authors of this little book will probably be remembered by their "History of Everyday Things in England." They are now publishing a series of books, "The Everyday Life Series," going back to the beginnings of man. The present volume deals with the life of the Old Stone Age, and covers the ground from the Java Sub-Man to the Onet Skulls. From scanty remains and from their study of primitive races of more recent times the authors have painted an attractive and human picture of the daily life and work of Strepyan, Chellean, Acheulean, Mousterian, Aurignacian, Solutrean, Magdalenian,

and Azilian man. We doubt whether the introduction to archaeology will be easily understood by the audience to whom it is addressed, and imagine that one or two other parts of the work will prove somewhat difficult of comprehension, mainly owing to the smallness of the book and the consequent lack of space. However, the book should prove of real value, with or without the aid of the teacher, to the older boy or girl. Seeing that the authors are breaking new ground, and difficult and uncertain ground, the experiment can be described as most successful. The whole work is written in an intimate manner, and the fine illustrations and reconstructions form half of its value.

Home Carpentry and Cabinet Making. By F. W. LEWIS. (3s. 6d. net. Routledge.)

While there is little doubt that carpentry is best learnt from personal instruction by a skilled workman, we have seldom seen a more satisfactory book for the amateur woodworker than this little volume. The author is evidently a craftsman with wide teaching experience, and he is to be congratulated on the success with which he has developed his subject. Comprehensive in scope, well printed, carefully arranged, profusely illustrated, the book should find a place in the library of every would-be amateur. We particularly commend Chapter III (on various woods), Chapter V (on the use of tools), and Chapter VI (on joints), although we notice, among other minor omissions, that there is no reference to Japanese oak in Chapter III, or to the use of "winding strips" in Chapter V. A subject of great interest to amateurs—finishing—is adequately treated in Chapters IX and X, although it is neglected in most elementary text-books. In his introduction the author refers to the economic value of woodwork as a hobby. A note on the present cost of tools and the current prices of timber would be illuminating.

Bell's Handbooks of Commerce and Finance.—(1) The Import Trade: Mixing Commodities. By A. RISDON PALMER.

(2) *The Use of Graphs in Commerce and Industry.* By A. RISDON PALMER. (2s. net each. Bell.)

The first of this series, entitled "Transport and the Export Trade," was referred to in these columns soon after publication. We have now received two more volumes dealing with customs duties and shipping documents, mixing and blending of commodities, and graphical representation and calculation applied to commerce and industry. The import trade is treated very briefly and, in view of the title of the book, the explanations given regarding customs duties and the importing business must be considered meagre. However, the book contains some excellent facsimile documents, and the examples provide good practice in writing invoices and account sales. The mixing of commodities is explained in a practical and interesting manner, and will appeal to teachers who combine business methods with instruction in arithmetic. The various methods of graphical representation are explained in order of difficulty, beginning with the line graph and proceeding through a series of graduated exercises to the use of rectangles and circles, and finally the meaning of the area enclosed by a graph. The work is well illustrated and clearly explained.

The "B.O.P." Library: *The Shadow on the School.*

By FRANK ELIAS. (3s. net. B.O.P. Office.)

Since the days of Talbot Baines Reed the *Boy's Own Paper* has been famous for school stories. This one is exciting enough, and all the time "the school behind the school" is in evidence, though not too prominently. There is a thrilling cricket match, and the secret of the stolen examination paper is well kept until the end. To say that the book has not quite the same glamour as, say, *The Master of the Shell*, is perhaps to confess oneself an old fogey and *laudator temporis acti*. Frankly, this thoroughly healthy story will be enthusiastically received.

Take It In Time: Talks on Thrift for Boys and Girls. By the Author of "How to Make a Fortune." (2s. 6d. net. Mills & Boon.)

The writer of this book has already appeared before the public as the author of "How to Make a Fortune; or, The Art of Growing Money," by "One who has grown it." His latest effort might have been entitled, "The Secret of Prosperity; or, The art of getting on," by "One who has got on." His subject is Thrift, and it is a merit that he conceives of thrift, not as merely saving money, but as the careful use of all talents and opportunities. He writes plainly and sensibly, and his language is well within the comprehension of boys and girls. Candidly, however, if we are to talk to boys and girls about the conduct of life, we prefer a broader notion of success than is here implied. This book might have satisfied the Geddes Committee. We hope that, taken by itself at least, it will satisfy no teacher.

Some Account of the Oxford University Press, 1468-1921.
(5s. net. Clarendon Press, Humphrey Milford.)

Not only Oxford, but England at large, may well be proud of a University Press which has been in existence for more than 450 years, and has been closely identified with the history of literature and scholarship in this country. The work before us tells the story of the origin and development of the Press's activities, and describes its present operations. In itself it is a beautiful example, if any were needed, of what the Press can do in the way of book production. The illustrations are well chosen and finely produced. The account of the work of the Press during the war, and of its enterprise in connexion with the great Oxford Dictionary and the Dictionary of National Biography, are among the features which will make this book one of general interest.

Traders and Trading: An Introduction to the Principles and Conduct of Business. By W. J. WESTON. (2s. 6d. net. Pitman.)

A well-expressed introductory volume intended to serve as a means of approaching the study of the more difficult textbooks on the conducting of business. It contains twenty short chapters dealing with various aspects of business activity. Without attempting to give detailed instruction in business organization, it lays a foundation for such instruction, by presenting in an interesting manner the trader's work in the world, and the way in which his functions are assisted by the institutions which make up the mechanism of commerce. It is to be recommended for general reading.

PSYCHOLOGY.

- (1) *The Machinery of the Mind.* By VIOLET M. FIRTH. (3s. 6d. net. Allen & Unwin.) (2) *Practical Psycho-Analysis.* An Introductory Handbook. By H. SOMERVILLE. (6s. net. Baillière, Tindall & Cox.)

(1) The literature of psycho-analysis grows apace, and most general readers know by this time that books on the subject differ very widely in scope and contents. Some are written for the beginner, others for the initiated, and still others for the specialist. Some, again, have an educational, and others a medical, bias. To any teacher or parent who wants an introductory and strictly elementary treatment of the newer psychology, we can cordially recommend Miss Firth's unpretending, but, in its way, most useful and meritorious little work. Originally given as a popular lecture course, it is intended "for those who have neither the time nor the training necessary to assimilate the standard works on the subject, but who want to know its elements." We have read the book with great interest from the first word to the last, and can certify that the writer's intention is well carried out. Mr. A. G. Tansley's commendatory preface is a well deserved tribute to Miss Firth's skill in presenting the subject simply, and to the general soundness of her matter.

(2) Widely different in its intention is Mr. H. Somerville's work on "Practical Psycho-Analysis." His also is an elementary work, but it is written for doctors and medical students who wish to know something of the subject, and have not time for the larger treatises. It is certainly not a book for any lay person similarly situated. Its point of view is naturally pathological throughout, whereas the person in charge of ordinary children or students wants to know what light psycho-analysis has to throw upon the mental life of the normal human being. To read this book would be misleading and shocking to most teachers and parents. But if any teacher has already grasped the main outlines of the newer psychology, as presented, say, by Mr. Tansley, and now desires an acquaintance with the medical point of view; and in particular if any such one has given up in despair Dr. Ernest Jones's bulky "Papers on Psycho-Analysis," Mr. Somerville will prove a useful guide. We should add that the writer clearly owns Freud as his master, and that the sexual element predominates in his treatment of the subject.

SCIENCE.

Notes on Furnishing and Equipment of Chemical Laboratories. (Chemical Society, Burlington House.)

A year ago the Council of the Chemical Society arranged a Conference to consider possible economies in the equipment of chemical laboratories. The recommendations thus arrived at are embodied in the pamphlet before us, and are issued in the hope that they may be of practical value to those concerned in the fitting up of science rooms. The seven sections deal with the tops of working benches, shelves for reagents, fume cupboards and hoods, sinks and waste channels, ventilation, miscellaneous and standardization of laboratory furniture. It need scarcely be said that the multiplicity of counsel on these

matters, yielded by experts who have actually designed and worked in laboratories has produced an authoritative mass of evidence as to the best materials and methods to be adopted. Many teachers who have experienced the unenviable product of the ordinary architect will regret that this brochure did not appear earlier. Certainly every teacher should procure a copy, although it is probably hopeless to expect a similar infiltration into the libraries of the usual designer.

Typical Flies: A Photographic Atlas. By E. K. PEARCE. Second Series. (15s. net. Cambridge University Press.)

The enormous economic importance as well as the biological interest of the two-winged flies make it especially desirable that students of these insects should have access to good illustrations for purposes of identification. Hitherto such helps have not been easily available. The two volumes of Mr. Pearce's Atlas, however, will do much to fill this serious gap in the literature of the subject, inasmuch as they provide clear photographic representations, on stated scales of magnification, of the principal British diptera, together with notes of the life histories. Most of the 125 photographs here reproduced—like those of Volume I—show distinctly the venation of the wings and other diagnostic features. The work should encourage the study, so urgently needed, of the most harmful of all groups of insects.

Alchemy: Its Science and Romance. By the Rt. Rev. J. E. MERCER. (9s. net. S.P.C.K.)

All who are interested in the rise of chemistry and of experimental science generally will find pleasure and instruction in Bishop Mercer's little book, in which the story of the great alchemists and of their labours and speculations is well told. Most readers will agree with the author's claim that the genuine alchemists must rank as true men of science and discoverers.

Macmillan's Life and Work Series: *Introduction to Textile Chemistry.* By H. HARPER. (3s. 6d.)

The application of science, especially chemical science, to textile work and the study of textile problems, is of great importance; and a knowledge of the principles of chemistry, of the chemical and physical properties of the textile fibres, and of the chemical changes underlying the various operations which are carried on in textile industries, is of fundamental importance in the training of those engaged in textile trades. The book before us supplies these essentials in an eminent degree. Some elementary knowledge of chemistry is assumed on the part of those who use the book, and such students will find an excellent treatment of subjects like wool-scouring, bleaching, the chemistry of oils and soaps, hardness of water and methods of softening, the action of chemical reagents on, and the application of, dyestuffs to the textile fibres. The descriptive work is enhanced by a large number of illustrations, including textile machines, and by the incorporation of a scheme of experimental work which should make the book of great value to students and teachers alike.

A Text-Book of Zoology. By the late Prof. T. J. PARKER and Prof. W. A. HASWELL. In Two Volumes. Third Edition. (50s. net. Macmillan.)

The appearance, after an interval of eleven years, of a new edition, affords the opportunity of calling the attention of teachers and students of zoology to the merits of this famous text-book. Some text-books introduce to their reader the various classes and orders of animals by means of cut-and-dried definitions, which, in the absence of specific knowledge, can convey but little clearly to the mind of the beginner. Here, however, the reverse, and far saner method is adopted. At least one, and in many cases two or three examples of each of the main groups are first described in detail, and with such clearness and aid from illustrations that a first-year student with a specimen before him should be able to acquire a clear grasp of the fundamental features; and then follows a summary or definition of the group, the learner being in a position to visualize its entire import. This third edition has been revised and brought up to date throughout; the most extensive alterations being in the chapters devoted respectively to the Nematode worms, the Mollusca, and the Annelid worms. The size of the work might, perhaps, lead teachers to fear that its standard was beyond that of school age. This is not so; for though of necessity it includes more than is required for elementary examinations in zoology, its contents are nowhere beyond the grasp of senior pupils; and for such of these as intend to pursue zoology after leaving school no text-book can be more highly recommended.

OXFORD and CAMBRIDGE SCHOOL CERTIFICATE and JUNIOR LOCAL EXAMINATIONS, 1923.

EXTRACT FROM "LE GENDRE DE M. POIRIER," BY AUGIER AND SANDEAU.

BY "ESSE QUAM VIDERI."

DUKE: Look well at that tunic. It is the only garment which boredom has never shared with me. And what about this little ornament which you pretend not to see?

GASTON: A woollen stripe.

DUKE: Which I picked up on the plains of Isly, my good fellow.

GASTON: And when are you to have the star of the brave?

DUKE: Ah! don't let's joke about it any more, my dear sir. That was all very well in former days: nowadays the cross is the one object of my ambition, and to win it I would cheerfully give a pint of my blood.

GASTON: Why, you have become quite an old soldier!

DUKE: I don't deny it. I love my profession. It is the only one which is suitable for a ruined gentleman. You see this active, adventurous life is amusing; even the discipline has its charm: it is healthy, and the mind is at rest when one's life is regulated for one in advance, without any possible discussion, consequently without any vacillations or regrets. Hence comes our heedlessness and our gaiety. You know what you have to do, and you do it and are happy.

GASTON: A cheap kind of happiness!

DUKE: And then, my dear sir, those patriotic ideas at which we sneered in the Café de Paris and that we qualified as Jingoism have a knack of making our hearts swell terribly when we come face to face with the enemy. The first cannon shot destroys all humbug and the flag is no longer a rag at the end of a pole, but it is our country's very robe.

(Continued on page 534).

UNIVERSITY OF EDINBURGH.

Chancellor : The Right Hon. The EARL OF BALFOUR, O.M., D.O.L., LL.D., &c.
Rector : The Right Hon. DAVID LLOYD GEORGE, O.M., D.C.L., LL.D., Prime Minister.
Principal and Vice-Chancellor : Sir J. ALFRED EWING, K.C.B., M.A., D.Sc., LL.D., F.R.S.
Secretary to the University : WILLIAM WILSON, M.A., LL.B., Advocate.

The Summer Term extends from about the beginning of May to the end of June ; in Law and Medicine from May to the middle of July.

The Autumn and Spring Terms open about the beginning of October and close about the middle of March.

The University embraces Six Faculties, viz. Arts, Science, Divinity, Law, Medicine and Surgery, and Music, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the Degree of M.A. (Honours and Ordinary), the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the combination of Arts, Science, Medical, Law, or Special Studies ; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Sc., and Ph.D. are conferred. The Degree of Bachelor of Education is conferred on candidates who have attended Courses and passed Examinations in Psychology and in Education (Theoretical and Practical). A Diploma in Education is also conferred. A Degree of Bachelor of Commerce (B.Com.) has been recently instituted, and Special Courses in Industrial Law and other kindred subjects are being provided. Degrees in Science (B.Sc. and D.Sc.) may be taken in Pure Science, Engineering, Public Health, Agriculture, Veterinary Science, and Mining, and the Degree of B.Sc. in Forestry. Temporary Regulations have been framed for a Diploma and a Certificate in Forestry for the behoof of Officers and men who have served in the War. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in Divinity affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The Law Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of Medicine has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz. Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.) ; and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A Diploma in Tropical Medicine and Hygiene (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There are also Diplomas in Public Health (D.P.H.) and in Psychiatry (Dipl. Psych.). In Music there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 51 Professors, over 130 Lecturers and about 70 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £21,500. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in all the Faculties, and they are admitted to all the Degrees.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the SECRETARY OF THE UNIVERSITY ; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 6s. by post. The preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz. Arts and Science Preliminary, 1s. ; Arts Bursaries, 6d. ; Medical Preliminary, 6d. ; Degree papers : Arts, 1s. ; Science, 1s. ; Divinity, Law, Medicine, and Music, 6d. each.

1922.

By order of the Senatus.

WILLIAM WILSON, *Secretary to the University.*

MASON'S SCRIPTURE MANUALS.

By the late W. T. MASON, M.A.,
Sid. Suss. Coll., Cambridge.

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. MR. WILLIAM RICE,

Three Ludgate Broadway, London, E.C. 4.

BY THE PRIZE EDITOR.

DUKE: Yes, you may well look at that greatcoat. It is the only coat that boredom never entered in my company. And that little decoration that you pretend not to see. . . . (*He points to the stripes.*)

GASTON: A woollen stripe.

DUKE: Which I picked up in the plain of Isly, my friend.

GASTON: And when will you get the "Star of the Brave"?

DUKE: My dear fellow, let's have no more joking on that subject; it was all right once upon a time, but now the cross is the one ambition of my life, and to get it I would gladly give a pint of my blood.

GASTON: Why, you're an out and out soldier!

DUKE: Gad, yes, that I am—I love my trade. It's the only one that suits a ruined gentleman, and my only regret is that I did not adopt it sooner. You see, this life of activity and adventure is entertaining; every bit of it, even the discipline has its charm; it is wholesome and restful to the mind to have one's life regulated in advance; no discussion is possible, consequently neither vacillation nor regret is possible. One knows what one ought to do, one does it, and one is happy.

GASTON: At small cost, too.

DUKE: And then, my dear chap, those patriotic ideas which we used to make fun of at the Café de Paris, and treat as Jingoism, swell our hearts like the deuce when we get in front of the enemy. The first cannon shot smashes humbug to bits and the flag is no longer a bit of cloth at the end of a pole, it is the very garment in which the country is robed.

We classify the 85 versions received as follows:

Class I.—(a) *Esse quam videri*, Seonaidh, Penguin, Chauve-souris, Dane, Emile, Darcy, Shax, Mondham.

(b) W. B. P., Chambord, Sarnia, Osborne, C. H. B., Cassandra, Catharine, Ignota, Lenore, Gothicus, Bésigue, P. H. M., Newman Noggs, Boy, Devonian, Taugenichts, Maria, Atlantis.

Class II.—(a) Fitzalan, No. 27, M. V., Barrie, P. M. G., Dava Moor, D. D., Back Number, Swallow, Bobs, Mike, Twinline, Spes, Hélène, C. S. C., Beta, Woodlea, S. F. X., Hamish, Hibernia,

Chingleput, Leander, Old Man, Ça ne fait rien, Menevia.

(b) Blick, M. A. H., Loyalty, C. A. B., Sirach, X. Y. Z., St. Barbe, N. S., Humdrum, E. S. A., Caro, W. H., Angus, Dunnabie, S. J., Mussouf, Narcisse, M. M. S.

Class III.—Buff Orpington, No. 3, Revilo, Marie, H. G., Myra Han, Kappa, Jocelyn, Julie, Dinkie, Francesca, Premier, Soufflet, Flops, San Foy.

A Prize of Two Guineas is offered for:

(1) *The best list of twenty English novels (excluding Scott, Dickens, Thackeray, Jane Austen, George Eliot, and all historical novels), suitable to form the nucleus of a school library for boys and girls of 17 to 19.*

Or,

(2) *The best list of twenty books, not stories, giving information and instruction in a light and readable form, suitable for boys and girls of 14 to 16. As wide a field as possible should be covered, and works on school subjects, e.g. history and geography, should be included.*

A competitor may essay both lists, but the prize will be given to the best single list.

Lists must be received by September 8th, and the result will be announced in the October number.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All Competitions must reach the Office by the first post on September 8, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

"A publication which must claim the serious attention of every student of educational progress."

—THE TIMES

"The best record of English Educational Thought and Practice."

—MONROE'S CYCLOPÆDIA OF EDUCATION

"The comprehensiveness of its survey of the educational field is well known. Moreover, it is written throughout by those who have an intimate acquaintance with the subjects of which they are treating."

—THE GUARDIAN

"Besides being a useful record of the educational events of the year, it forms a valuable miscellany of essays and general articles interesting to teachers."

—THE SCOTSMAN

"Continues to occupy the premier position. It has unrivalled facilities for learning what is being transacted behind the scenes, and its columns are open to every shade of opinion."

—THE OXFORD MAGAZINE

"The Journal of Education.' This has made its way to the top rank of educational journals. Nowhere can we find a more carefully recorded chronicle of events, better considered judgments on questions of the day, or more competent criticism of educational literature."

—THE SPECTATOR

"The first in this country to devote itself to the work of Education as a whole, without regard to any particular sect or society. It numbers among its contributors a more brilliant group of scholars, perhaps, than any similar periodical."

—THE PALL MALL GAZETTE

"A publication which has long since established itself as one of the most readable and useful journals for teachers."

—THE BIRMINGHAM DAILY POST

(late Senior English Mistress, Newcastle High
School), from whom Prospectus can be obtained.
The Senior and Junior Boarding Houses stand in
their own grounds, having Tennis Courts, Net Ball
pitch, Kitchen Gardens, and Greenhouses

The aim of the School is to give a thorough
education to girls up to 19 years of age. No examina-
tions are taken in the Lower School. Girls over
17 years of age may take a special course in Domestic
Science. A School Scholarship is awarded annually
on the result of the Midsummer Examinations.
Pupils under 12 are not required to pass an Entrance
Examination. Special attention is given to physical
development. This department is under the care of
a fully trained resident Mistress.

The School being within easy reach of London, the
pupils are able to have many educational advantages.

Special School for Backward Children.

PRIVATE Residential School for
children needing individual help with lessons.
Usual school subjects. Modern methods. Highly-
qualified staff. Specialist for Dancing and Physical
Exercises. Resident Medical Officer. Country sur-
roundings. Grounds 5 acres. Sunny aspect. Fee,
from £100. No extras. Prospectus from Miss
MARION BRIDIE, The Vineyard, Longbridge Lanes
near Birmingham.

MISS DYMPHA SMITH'S

By MR. OSCAR BROWNING, appeared in November
and December, 1920. The two, post free, for 3/-.

YOUR HOLIDAY ADDRESS?

As in previous years, the Publisher will be happy to send
the **SEPTEMBER** Number to holiday addresses. Early
intimation should be given of the necessary change.

The **SEPTEMBER** Number will be posted on

August 31.

LONDON:

Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

LADIES with University or other teaching qualifications, and teachers of special subjects seeking appointments in Public or Private Schools, at home or abroad, for the Autumn Term, should at once register with

Truman & Knightley

SCHOLASTIC AGENTS LTD

who will be pleased to give their requirements careful and personal attention.

THERE IS NO CHARGE FOR REGISTRATION OR MEMBERSHIP.

The terms to those securing engagements through this agency are:

On accepting the engagement	10s.
At the end of the first term of such engagement	2½%
On the first year's salary, with an additional fee of £1 if the post be resident.	

Special terms for temporary engagements.

These fees are reckoned on the lowest possible basis consistent with efficient service, and compare very favourably with those charged by any other agency.

The following are selected from a number of **Autumn Term Vacancies**, which are still open and for which Messrs. TRUMAN & KNIGHTLEY have been instructed to put forward candidates:

Joint Agency for Women Teachers

OAKLEY HOUSE,
14, 16 & 18 BLOOMSBURY STREET, LONDON, W.C.1.
Under the management of a Committee appointed by the Education Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose of enabling Teachers to find work WITHOUT UNNECESSARY COST. All fees have therefore been calculated on the LOWEST BASIS to cover the working expenses.

No Registration Fees are charged to Members of the above Associations, and their commissions are reduced.

Hours for Interviews—
11.30 a.m. to 1 p.m., and 3 to 5 p.m.
Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.
When possible, special appointments should be arranged.

Registrar—Miss ALICE M. FOUNTAIN.

The Association of University Women Teachers,
74 GREAT RUSSELL STREET, W.C.1 (3rd floor).
Recommends Teachers and Lecturers. Teachers, with University qualifications, requiring posts in Public or Private Schools, are invited to apply to the Secretary—Mrs. R. BROWN. Subscription 5s. per annum. Tel.: Museum 3127.

THE
COLLEGE OF PRECEPTORS,
Incorporated by Royal Charter,
BLOOMSBURY SQUARE, LONDON, W.C.1.

A Course of twelve lectures on The Teacher's Present Day Problems, by Professor John Adams, will begin on the 21st of September.

So many changes are at present taking place in the theory, and particularly in the practice, of school work that the self-respecting teacher who does not wish to fall behind finds it difficult to keep abreast of them all. The course of lectures is intended to enable those who are in actual school practice to keep in touch with all the new developments, so that they may be in a position to make an intelligent choice among the many new plans and proposals that are being put forward. The lectures will deal with all classes of schools, and will be copiously illustrated by accounts of what is actually being done in the more progressive schools of to-day.

The syllabus may be obtained from the Secretary.

**University
Correspondence
College,**

FOUNDED 1887.

PRINCIPAL: WILLIAM BRIGGS, LL.D.,
D.C.L., M.A., B.Sc., F.C.S., F.R.A.S.

From the foundation of the College in 1887 to the end of 1914, **22,472** U.C.C. Students passed London University Examinations, averaging over **1,000** annually during the nine years 1906-14. During the War the number of successes naturally decreased, but in 1920 the number of passes was **1,007**, and in 1921 the unprecedented total of **1,357** was reached.

Free Guides

delivered extempore. They can be
adapted (as requested) for Junior or
Senior pupils.

The object is to present the subjects in
a vivid and interesting manner, illustrated
and enforced by descriptive and other
matter drawn from many years of extensive
travel. The chief aim is to inculcate
a big interest in historical studies.

MRS. CAMPBELL DAUNCEY,
45 Acacia Road, London, N.W. 8.

14 Eleham Road, Kensington, W. 14.

Truman & Knightley

SCHOLASTIC AGENTS LTD

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Schools.

Assistant Masters and Tutors.

This department is under the personal direction of Mr. JAMES HEARD, B.A. (of Westminster and Trinity College, Cambridge).

Assistant Mistresses.

The work of this department is divided into four groups, each under a trained Assistant, so that the requirements of each client may receive individual attention.

Lady Matrons, Housekeepers & School Secretaries.

This department is under the personal direction of a Trained Lady Superintendent.

THERE IS NO CHARGE TO PRINCIPALS ; OR TO CANDIDATES FOR REGISTRATION OR MEMBERSHIP.

The terms to those securing engagements through this agency are:

On accepting the engagement	10s.
At the end of the first term of such engagement	2½%
on the first year's salary, with an additional fee of £1 if the post be resident.	

Special terms for temporary engagements.

These fees are reckoned on the lowest possible basis consistent with efficient service, and compare very favourably with those charged by any other agency.

Transfers of Schools and Partnerships.

This department is under the personal direction of Mr. TRUMAN, who has had a wide experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to give sound advice and assistance to those seeking to buy or sell Schools and Partnerships.

NO CHARGE IS MADE TO PURCHASERS.

All communications and inquiries are treated in the strictest confidence.

**UNIVERSITY COLLEGE HOSPITAL
MEDICAL SCHOOL**
(UNIVERSITY OF LONDON).
UNIVERSITY STREET, GOWER STREET, W.C.1.
Telephone : Museum 7026.

The WINTER SESSION will COMMENCE on OCTOBER 2, 1922.

The School is for final studies only, and gives a complete curriculum for all the final examinations.

Clinical units under whole-time directors and assistants have now been established. These directors are responsible for the teaching of the principles of medicine and surgery, while the practical teaching is largely in the hands of the honorary staff of the hospital.

FEES.—For the final course 112 guineas, if paid in one sum, or 115 guineas paid in two instalments of 70 and 45 guineas.

Dental students can obtain a complete curriculum at University College, University College Hospital, and the dental department of University College Hospital (the National Dental Hospital, Great Portland Street). This department has recently been reorganized and equipped on the highest standard of modern requirements, and is admirably adapted for the teaching of students in the science and art of dental surgery.

Forty-seven appointments are open during the year to students, and paid appointments to the annual value of over £500.

Scholarships, exhibitions, and prizes of the value of over £1,000 are awarded annually.

BUCKNILL SCHOLARSHIP entitles the holder to the course of Intermediate medical studies at University College, and for the final studies at the Medical School.

GOLDSMID EXHIBITIONS.—Two Exhibitions, the subjects of the examination being anatomy and physiology, are awarded annually in July and entitle to course of Final Medical Examinations.

RECREATIONS.—The athletic ground of 22 acres is at Perivale, and contains 22 tennis courts, cricket, football, and hockey grounds. A gymnasium and squash racquet court are installed in the School, while the asphalt tennis court, fives, and racquet courts at University College can be used by members of the Students' Medical Society.

All further information and prospectus can be obtained from the Secretary, and the Dean can be interviewed at any time by appointment.

Dean, G. F. BLACKER, C.B.E., M.D., F.R.C.P., F.R.C.S.

Vice-Dean, A. M. H. GRAY, C.B.E., M.D., F.R.C.P., F.R.C.S.

Secretary, G. E. ADAMS, F.C.I.S.

University College Hospital Dental School

(NATIONAL DENTAL HOSPITAL),

Great Portland Street, W.1.

**WINTER SESSION commences
2nd October, 1922.**

This Hospital and School, situated in the centre of a large population, and within a few minutes of University College Hospital, has recently been reorganized and equipped on the highest standard of modern requirements, and is admirably adapted for the teaching of students in every branch of the Science and Art of Dental Surgery.

THE MECHANICAL LABORATORY, CONSERVATION ROOM, AND X-RAYS DEPARTMENT

are replete with all the latest approved appliances.

Students (men and women) enter as students of University College Hospital, and attend classes in

CHEMISTRY, PHYSICS, ANATOMY, AND PHYSIOLOGY

at University College, adjacent to University College Hospital.

Each student serves as a dresser in the extraction, anaesthetic, conservation, and X-rays departments.

Four house surgeons are appointed half-yearly.

The Calendar, containing full information as to lectures, fees, prizes, &c., may be had on application to the

SUB-DEAN FOR DENTAL STUDENTS,

who attends the hospital on Mondays at 10 a.m.

MIDDLESEX HOSPITAL MEDICAL SCHOOL, W. 1.

University of London.

THE WINTER SESSION will begin on October 3, 1922. Entrance Scholarship Examinations begin September 18th. The entire Medical Curriculum can be taken at this School.

There is no accommodation for Women Students.

Annual value of Scholarships and Prizes £1,000.

Large Research Funds.

Staff includes 6 University Professors, 1 University Reader, 29 Lecturers, 8 Demonstrators and 4 Tutors.

The Social and Athletic side of the student's life has been arranged for. There are large athletic grounds with new Pavilion, restaurant, and gymnasium, Common Room Society, Medical Society, Musical Society, and various other Clubs.

Write for Prospectus to the DEAN, A. E. WEBB-JOHNSON, C.B.E., D.S.O., F.R.C.S., or to the SCHOOL SECRETARY, R. A. FOLEY, Middlesex Hospital Medical School, Berners Street, London, W. 1.

ST. MARY'S HOSPITAL MEDICAL SCHOOL,

PADDINGTON, W. 2.

(University of London.)

THE WINTER SESSION will begin on October 2, 1922, when students can join classes in Preliminary, Intermediate, or Final subjects.

Special features of this Medical School are:

Healthy West-end Situation.

Clinical Units in Medicine and Surgery.

Athletic Ground of 10 acres with large pavilion

Research Scholarships amounting to £600 per annum.

Other Scholarships and Prizes of nearly £300 per annum.

Special Training in Pathology and Bacteriology.

Nearly 1,000 beds available for Clinical Teaching.

Five Entrance Scholarships in Natural Science will be competed for in September.

Illustrated prospectus and full particulars may be obtained from the SECRETARY.

C. M. WILSON (M.C.), M.D., F.R.C.P.,

Dean.

LONDON HOSPITAL MEDICAL COLLEGE AND DENTAL SCHOOL.

**THE WINTER SESSION WILL
OPEN on MONDAY, OCTOBER 2nd.**

The Hospital is the largest in England, 950 beds are in constant use. Last year the number of in-patients, 18,770; out-patients, 108,153; dental patients, 4,110; major operations, 7,466.

THE MEDICAL, COLLEGE AND DENTAL SCHOOL are essentially modern, with large laboratories equipped with the latest and most approved appliances.

The Staff is so large as to permit of individual attention being paid to all students.

RESEARCH FUNDS of over £26,000 give unrivalled facilities for medical research.

APPOINTMENTS.—Over 160 appointments are made annually from students of the College recently qualified.

SCHOLARSHIPS AND PRIZES.—Numerous scholarships and prizes are awarded annually, including 4 entrance scholarships.

CLUBS' UNION.—Athletic ground of over 13 acres. Students' Hostel, &c.

For Prospectus and particulars apply to the DEAN (Prof. WILLIAM WRIGHT, M.B., D.Sc., F.R.C.S.), who will be pleased to make arrangements for anyone wishing to see the Medical College and Dental School, Mile End, E. 1.

**For important article

Partnership Desired.

LADY, Principal of School and L.R.A.M., wishes to become partner in good-class seaside or London School. Could bring a few boarders, and has a French connexion. Specializes in Choral Training, Aural Culture, and Orchestral Accompaniment. Address No. 11, 276, c/o Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

Psychology and the Teacher,

By Dr. P. B. BALLARD,

appeared in the AUGUST 1920 Number of

"The Journal of Education & School World."

Copies can be obtained through any bookseller, or post free for 1/6 each from

Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

Guy's Hospital Medical School.

The Hospital, which is situated two minutes' walk from London Bridge, contains 644 beds.

Students are appointed to Dresserships and Clerkships in the Wards and Out-Patient Departments on the sixteenth day of January, April, July, and October. All Students hold the following posts in turn: Surgical Ward Clerk; Clerk to Medical Unit, first three months; Junior Dresser to Surgical Unit; Clerk to Medical Unit, second three months; Senior Dresser to Surgical Unit; Obstetric Dresser, Extern, and Clerk in the Children's Department; Dresser in a group of Special Departments. Numerous other posts are open for application.

The Medical School Buildings have all been erected or rebuilt since 1904, the Department of Anatomy in 1904, of Biology in 1905, of Physiology in 1910, of Chemistry in 1910, of Physics in 1910, and of Pathology in 1912. The Wills Library was presented in 1903, the Gordon Museum in 1905.

The Students' Club and Residential College were erected in 1890. The Club contains reading, dining, and smoking rooms, while the College affords accommodation for about 60 Students, chiefly those who may be summoned to the Wards at any hour of the day or night.

Adjoining the Club are the Pavy Gymnasium, a covered swimming bath, and a squash racquet court. The Athletic Ground, of nine acres, is situated at Honor Oak Park, distant about 15 minutes by train.

FEES AND COURSES.

FIRST YEAR—For Preliminary Science Course: £22 8s. for 12 months or less period, deducted from the Entrance Fee payable as a Second Year's Student. A special fee of £7 is charged for materials for this course.

SECOND OR THIRD YEAR (after First M.B.): Entrance Fee, £28. Annual composition fee, £49, including all necessary materials.

FOURTH YEAR (after Second M.B.): Entrance Fee, £14. Annual Composition fee, £49, including all necessary materials.

Provided a Student has paid three annual composition fees, a proportionate rebate will be allowed from the last on his obtaining an approved qualification at any time within nine months of the last payment.

Entrance Scholarships to the value of £500 are awarded annually in September.

For further particulars, and permission to be conducted over the School Buildings, application should be made to

THE DEAN, GUY'S HOSPITAL, S.E. 1.

St. George's Hospital Medical School

(UNIVERSITY OF LONDON),

HYDE PARK CORNER, S.W.

THE HOSPITAL and MEDICAL SCHOOL are situated at Hyde Park Corner, and are *readily accessible from all parts of London*.

The HOSPITAL has a service of 450 beds, of which 100 are at the **CONVALESCENT BRANCH** at Wimbledon, which is the largest Institution of its kind. Hence the proportion of acute cases at St. George's is unusually large.

The entire teaching in the School is devoted to the subjects of the Final Examinations, that is to say, to the essentially medical subjects.

By arrangement with the London University, Students attend either at King's College or University College for tuition in the Preliminary and Intermediate subjects.

EXHIBITIONS AND PRIZES.

The **WILLIAM BROWN EXHIBITION**, of the value of £135 per annum (tenable for two years), is awarded by examination to a Perpetual Pupil of the Hospital every second year.

The **WILLIAM BROWN EXHIBITION**, of the value of £49 (tenable for three years), is awarded by examination to a Perpetual Pupil of the Hospital every third year.

The **ALLINGHAM SCHOLARSHIP**, of the value of £60 (approximately), is awarded annually for the best Surgical Essay.

The **BRACKENBURY PRIZE** in MEDICINE, the **BRACKENBURY PRIZE** in SURGERY, the **WEBB PRIZE** in BACTERIOLOGY, each of the value of about £30; and many other Prizes, are awarded annually.

The **WINTER SESSION** commences on October 1st, the **SUMMER SESSION** on May 1st, but Students can enter at any time for any particular course.

Further information may be obtained from the Dean of the Medical School.

W. S. FOX, M.D., *Hon. Treasurer.*

OCCASIONAL NOTES.

INEVITABLY, the Board of Education report for 1920-21 begins with regrets for the postponement of educational facilities on financial grounds and quotes in full Circular 1190, as a summary of the lines on which retrenchment had to take place. So far as the physical well-being of the children in elementary schools is concerned, the Board has several satisfactory points to make: for instance, more than one and a half times the number of children were medically inspected as compared with the number in the previous year, and very nearly double the number of free meals were provided—due in the latter case mainly to unemployment. Arrangements were made during the year for finding additional elementary school accommodation for over 50,000 more children, the total number of children provided for in the schools being 5,460,344. The efforts which had been made during the previous year to increase the number of intending teachers resulted in the number of persons so recognized being larger than at any time since 1909-10. The ratio of girls to boys, 6,507 to 1,350, was, however, more disproportionate than in the previous year. Two interesting facts emerge from a mass of statistics dealing with teachers: no real attempt is made, on any definite system, to co-ordinate demand and supply over a lengthy period; and, in several districts which contain a very large proportion of town population, Local Authorities draw the main part of their staffs from outside their own areas.

IN this section the chief feature is the appearance of a number of signs that the Board's policy of the last two or three years has been bearing good fruit—now, unfortunately, being checked by the various "economies" forced upon the Board by the Government. The Board has been doing much to force pupils in secondary schools to remain until sixteen and so

complete a four years' course of study. Already, according to the Report, steady improvement in the length of the school life is being shown. In 1913 the proportion of pupils who entered the schools before the age of twelve was 45 per cent; in 1921-22 it was 58 per cent. Hardly anything is more welcome to those responsible for the organization and teaching in secondary schools than the knowledge that the material upon which they have to work is likely to be in their hands for a full secondary school career. There is an equally welcome rise in the percentage of those who stay after sixteen, though, here, the suspension of State Scholarships strikes a severe blow at a policy which was just beginning to succeed—the institution of advanced courses; for most pupils who are doing so have these scholarships in view. Though the total number of pupils in the schools has increased by over 18,000 as compared with the previous year, the number of entrants decreased owing to the lengthened school life. It is a curious commentary on the supposed liberality of the Burnham Scales that the proportion of graduates to non-graduates is practically what it was in 1913-14; in fact it is nearly 2 per cent less. There is hardly a page in the section dealing with secondary education which does not show the increasing demand and the resulting pressure on the schools.

"I WOULD view with very great dismay the educational situation if the Local Authorities did not make good this deficiency." In these words Mr. Fisher, in the House of Commons, on August 4, justified to the full the opposition to the Board's proposed reduction of the Government Grant to secondary schools not belonging to the Local Authorities. This was his argument: "The schools are good and efficient. To keep so they must have this money. We have found it for many years past, on a definite scheme approved by Parliament, but now we want to economise, that is, we want to save the public funds for which we are responsible at the expense of other public funds for which the Local Authorities are responsible. We tell them that as we will not pay any longer, they must. We know they are not obliged to do it, but if they refuse, well, 'we shall view the educational situation with very great dismay.'" That is an absolutely fair epitome of a speech which occupies five columns of "Hansard." No wonder Mr. Fisher prefaced it with an appeal for sympathy on the ground that it was "no pleasure to him" to abate the necessary means of support for secondary education. We are sure that is the truth, but then why does he do it? Can there be reasons strong enough to justify a Minister, with a due sense of the trust committed to him, in advocating a course not unlikely, even in his own opinion, to have results which he would "view with very great dismay"? Possibly there may be, but we have not heard them yet.

WHAT will the Local Education Authorities do? Will they obediently pick up this new burden, thrown down by the Government, and add it to the load already resting on the back of the patient ratepayer? If so, they must do it with the full knowledge that it will be quickly followed by more burdens, to be dealt with in like manner. The so-called Economy Bill (which, by the way, has introduced a new

The Board and Circular 1259.

The Board of Education Report.

The Local Authority and the Grant.

The Report and Secondary Education.

and amusing game into Government offices, "Find an Economy in the Economy Bill") will provide a heavy one. Rules, Orders, and Regulations, made or threatened by the Board of Education, on a variety of subjects, will furnish others. "Take it out of the Budget, and put it on the Rates," has apparently become the cherished maxim of the Treasury. When are the Local Authorities going to make a united stand against it? They will be forced to do it sooner or later. How heavy is the burden to become before they rebel? Mr. Fisher tried to convince the House that after all this was only a little one. "The abolition of this Grant," he said, "has been invested with an importance which it does not really possess." But he wiped out his own excuse in the very next sentence, with that fatal admission of his "very great dismay" in case some one else does not find the money. He knows, as the Local Authorities know, that upon the presence or absence of that half million in the bank accounts of the secondary schools depends much of their efficiency and usefulness. Again, what will the Local Authorities do?

INTRODUCED by Mr. Fisher, the Bill for the Universities of Oxford and Cambridge proposes to appoint two Commissions, one for each University, with powers limited to 1924 or if necessary 1926, their duties being to make statutes and regulations for the University, its colleges, halls, &c., in general accordance with the recommendations of the Royal Commission, modified as may appear expedient after receiving representations from those concerned. It is specially provided that Trusts not more than fifty years old are not to be over-ridden. The objects of the Bill, both commendable, appear to be to save time and reduce formality. The proposed Commissioners are named in the Bill and will inspire confidence, Lord Chelmsford being Chairman of Oxford Commissioners, and Lord Crewe of the Cambridge Commissioners. The Report of the Royal Commission which was signed in March has been singularly free from public criticism. As the result of earlier Reports of this character in the Victorian period, pamphlets, flysheets, and articles fell as thick as leaves of Vallambrosa. The only inference to be drawn from the peaceful reception of the recent Report is that its recommendations meet the financial needs of the Universities without unduly disturbing their domestic arrangements. This is satisfactory so far as it goes; but from the public point of view it is unfortunate that the Report did not investigate more fully the relation of the ancient Universities to our national system of public education in various aspects.

ACCEPTANCE of large public grants must necessarily imply that the Universities can no longer maintain the position of splendid isolation which they have hitherto enjoyed. Questions of inter-working with other Universities, of salaries and other financial incidents, of the selection and subsidizing of students and generally of the relations of the Universities to secondary schools, of post-graduate education and the promotion of research, and of women's education, must be examined on a wider basis, if a national system of university education is to be achieved. As our correspondent has reported, Oxford has shown greater nervousness than the sister

University of the acceptance of public grants on the generous scale proposed. For example, it has been suggested at Oxford that a system of specific grants for stated objects is to be preferred to a block grant from the point of view of avoiding State control. Notwithstanding Mr. Fisher's clear disclaimer of any desire to control University education bureaucratically, so many object-lessons of this insidious danger have been furnished in recent years in other departments of education that the Universities would be well advised to secure some statutory understanding as to the scope and nature of the public control to be exercised as a condition of financial support. There are occasions when it is wise to look a gift horse in the mouth. Sir Michael Sadler's eloquent warning of the dangers of State control of University education at the Universities Congress at Oxford last year is still fresh in memory.

THE Board of Education's Circular 1268, on the salaries of full-time lecturers in training colleges, sets at rest for the present a question which has been one of some difficulty between the Board and those local authorities which provide training colleges. Some of the authorities have taken the reasonable view that since the training colleges ought to be able to attract some of the best teachers in secondary schools, posts in the former should be the better paid. The Board, however, now lays it down that the scales are to be identical, but with the important proviso that the posts of special responsibility in a training college may be as many as one half of the number of full-time posts. There was another good reason for getting this matter put on a definite footing. The voluntary or non-provided colleges receive grants at so much per student, out of which they are enjoined to pay as good salaries as possible. But they are not usually able to pay salaries above the Burnham scales for secondary teachers. The provided colleges, which are differently financed, have, as we have said, tended to go beyond those scales. We think the authorities of the provided colleges are right in principle, but we think also that it is undesirable to place one set of colleges in a better position than the other as regards the salaries of lecturers.

IT should be reassuring to the Treasury that the Board of Education is able to state "that the large economies already effected by Authorities themselves as a whole have brought their estimates within the total on which the Board are in a position to pay grants." This remark applies to five special services, the School Medical Service, Special Schools, Organization of Physical Training, Evening Play Centres, and Nursery Schools. The grim spectre of increasing rates, or more correctly, perhaps, the indignant ratepayer, is causing some authorities to desire to ruthlessly curtail activities supplementary to school maintenance. The Board has intimated in its circular that it will not be able to accept proposals which reduce or leave the authority's arrangements below a reasonable level of efficiency in respect of their scope, or the maintaining of efficient administration. In this connexion we are glad to see that special reference is made to the organization of physical training. This is a relatively new service, still in an early stage of growth.

and Co-ordination.**

Circular 1268

But "even a short experience has been sufficient to show the great value of the service, and the Board would view its curtailment, or the restriction of its gradual development, with great regret." It is pointed out that the service is a potent auxiliary in the prevention of debility and disease, and therefore projected savings in its cost might reasonably be postponed till the possibilities of alternative savings have been fully tested.

ONE generally connects vacation courses either with the ancient universities or with the pleasantest of rural or seaside surroundings. A vacation course for teachers held in the heart of London, and planned so extensively as to attract four or five hundred teachers, is a new thing. Yet London, with its museums and libraries, and its vast wealth of historical associations, is obviously the right place for such a course, and especially for a course designed in the interests of provincial teachers. For people who live far from the madding crowd, and have much greater opportunities for reflection than for discussion, it is no doubt a seasonable change to hear all about the "new teaching," the "new psychology," the "new children," and the like. We suspect, however, that they appreciated London still more than the lectures by distinguished experts announced in the programme. By the way, if the course failed to achieve success, it would certainly not have been through lack of vigorous advertisement. The compiler of the programme, anxious that all teachers should "take stock," "push forward," and "march with the times," has evidently modelled his effort on lines that commend themselves to American educators, with the result that it reads singularly like the prospectus of a doubtful joint-stock concern. We hope the course has been so successful that next time it will need only a sober announcement, not the seductive arts of the business advertiser.

IN his opening address at the Guildhall to members of the London Vacation Course, Lord Burnham said a few things which teachers of all grades would do well to ponder. The teaching profession, he observed, had reached a stage in public estimation when its members should be wary of the temptations that beset them. They must on the one hand beware of the dignified isolation of a class, and of living apart from the community. But on the other hand they must beware of the slippery slope of party politics. All the parties of the State were anxious to enlist their support, because it was thought that the teacher wielded an influence which would, if enlisted on their side, improve their chances at elections. Indeed, in some foreign countries teachers were looked upon as a dangerous class, liable to spread anarchical opinions in an insidious fashion. It would be well, said Lord Burnham, for teachers to recollect that their assured position now implies self-respect in its highest form, and to make up their minds that they would not be made the tool or instrument of any party. On the question of salary scales, Lord Burnham expressed his conviction that the English tradition of local independence must not be strained so far as to prevent the Board of Education from dealing energetically with Local Authorities who insisted upon the adoption of eccentric scales.

DURING the miners' strike several of the Education Authorities in Scotland found themselves involved in the very considerable expense of feeding and clothing the strikers' children in accordance with what they believed were the requirements of the Education Acts of 1908 and 1918. Glasgow, bent on economy, referred the question of their liability in this and similar respects to counsel, and received the opinion that they were not called on to anticipate destitution, but only to feed and clothe children in cases of proved necessity. The Scottish Education Department in a circular, drawn up after consultation with the law officers of the Crown, confirms the view and expands it in detail for the guidance of all the authorities. There has been a not unnatural tendency, it points out, to overlook the fact that the primary object of the Section of the 1908 Act relating to this matter is to discountenance all forms of child neglect by bringing home to parents a due sense of their responsibility, and that the provision for assisting the children is merely ancillary. The authorities have no power under the Acts to prevent neglect. They can only take action when the fact of neglect has been brought formally before them through medical inspection or otherwise. Even so, they must limit the provision of food and clothing to those cases where the parents have failed to make it by reason of poverty or ill health. Where the parents are in receipt of Poor Law relief it is the Parish Council and not the Authority which should feed and clothe the child.

REGARDING the position of the men on strike, there will be universal agreement, the Department thinks, that a parent cannot be "unable by reason of poverty" to supply sufficient and proper food or clothing for his child if he voluntarily abstains from work. But with the same caution which leads the Department to qualify all the clear-cut statements it begins by making, it is pointed out—very properly—that this is a general principle which will sometimes present difficulty in particular application. How far the Circular will affect the course of action of the Authorities it is impossible to say. It is probably quite true that the strict limits of the law have been exceeded by some Authorities in the past. But it is not likely that any body with a right sense of its educational responsibilities is going to let children come to school cold and hungry for a technicality, and ways and means of getting round the Acts, and the official interpretation of them, will certainly be found by many of the Authorities in the interests of humanity.

THOSE who remember botany gardens as a collection of rectangular plots each devoted to one natural order, and each, for the greater part of the year, an arid waste, bearing less relation to nature than the illustrated plates found in Floras, will welcome the account given in Educational Pamphlet No. 41, by Dr. Lilian J. Clarke, issued by the Board of Education, of the school gardens which have been, and are being, made at the James Allen's Girls' School, Dulwich. Work on classification now falls into its proper place in the study of the subject, and is done after the pupil has acquired a knowledge of the vegetation of certain clearly defined regions. Gardens

Allen's School is fortunate in having grounds in which experiments can be made, and not less fortunate in having an enthusiast like Dr. Clarke in charge of the work there. The construction of a heath, a salt marsh, a pebble beach and a sand dune in grounds where the stiff London clay soil has presented many difficulties, and the fact that an old girl of the school was able to finish in the salt marsh a piece of research work on the transpiration of salt marsh plants for which the doctor's degree was awarded, gives some indication of the success that has been attained. Useful details are given in the account of the construction of the pond, of the damp oak wood and lane, and in regard to the expenses incurred, and the book may be commended to all who are trying or intend to try similar experiments. Photographs of the lane and wood show that the school garden has gained in beauty as well as in interest from the work done. Critical science teachers will probably regret that it is not found possible to allot more time to Physics and Chemistry; the Botany has certainly gained immensely from the school point of view from being taught continuously, but the hour a week for three years which is all that is given to the other sciences does not permit of the covering of much ground in these subjects.

The London Matriculation Examination. IN the daily press has appeared a number of letters and paragraphs criticizing the London Matriculation Examination held last June. Some of the complaints relate to the character and standard of the papers set, but according to a correspondent in *The Times* the pith of the criticism is that individual caprice in the examiner rather than fault or merit in the candidate determines the result of the examination. Those who are acquainted with the procedure adopted in marking the papers know well that such accusations must be entirely groundless unless examiners and their assistants are incompetent and careless to an extraordinary degree, or wilfully disregard the instructions laid down by the University for the conduct of the examination. A Board of Moderators scrutinizes the papers before they are printed. After the Examination is held the chief examiners carefully discuss with the assistants the method of marking. The assistants then read a certain number of books, which have to be forwarded at once to the chief examiners in order that they may satisfy themselves that all are marked to a uniform standard. As the reading of the books proceeds, the chiefs receive for revision those for which the total marks lie within certain limits on each side of the pass line. This procedure ensures that no candidate who has the least claim to consideration can be rejected without a careful scrutiny of his work by two examiners. It is unfortunate that rejected candidates and their friends should have been led to bring against the examiners a serious charge which is apparently based on nothing more substantial than their own natural feelings of disappointment.

Reigate WE have no intention of discussing the details of the Reigate expulsions case or of attempting to apportion the blame. But certain principles stand out beyond all controversy. In sending his boy to a school the parent delegates certain of his powers and obligations to the teacher. The limitations of this delegated

authority are set out plainly in the school rules. A parent applying for admission accepts, if not in so many words, at any rate implicitly, these school rules, and is therefore bound to comply with them. There is a kind of contract and it is to be respected as such. In this case the parent asks leave beforehand for his two boys to be absent on a certain afternoon. The reasons stated are not satisfactory to the Head. The permission is not given. Thereupon the parent takes the law into his own hands and keeps his boys from school. Immediately what was in itself a small matter becomes serious. The issue then is, which is the supreme authority? It is something like a conflict between father and mother before the child. Such an open conflict cannot but have a bad effect on the children concerned and on the whole school.

Responsibility. IF a school were a mere knowledge shop, where a parent paid so much per week for instruction as he pays so much per pound for cheese, it would be different. But it is not so. A school is held responsible for the whole tone and atmosphere which it instils into its members; it is accountable for conduct and character as well as for knowledge. Nor can the two functions be separated the one from the other. For this tone the head master and head mistress are held answerable. If the discipline or spirit of the pupils is unsatisfactory the Head is blamed. Where there is responsibility there must be corresponding authority. A head master cannot, without reducing his office to an empty name, be hindered from the exercise of power and, as a last resort, the power of expulsion. Thomas Arnold used this power in a way which seemed arbitrary directly he came to the conclusion that a boy was exercising an influence which was not helpful. And his hero-worshipper, Thomas Hughes, though his own brother was not permitted to return to school, acknowledges that the exercise of the power was salutary, and it was through this instrument Rugby became what it was under Arnold. One point a master must impress, viz.: that duty comes before pleasure, and the call of pleasure must not excuse a man for the shirking of duty. If a school does not enforce this, the home rarely does. Yet there is no lesson more valuable to us.

Games for Girls. THE Report, just issued, of the Joint Committee on the physical education of girls, formed last October by the College of Preceptors, takes up that position of moderate and cautious approval which was expressed at the Conference of the Head Mistresses' Association at Manchester, in June, 1921, especially in a paper by Miss Nickalls, of the Lady Holles School, Hackney. It will be remembered that the Head Mistresses' Association did not accept the invitation to send representatives to the Joint Committee. It is all to the good, however, that this careful inquiry should have been made, especially as medical men and women were on the Committee, and questionnaires were sent to medical practitioners as well as to persons competent on the educational side. The public mind will now be set at rest so far as schools are concerned, realizing that the authorities in these do take the necessary precautions to prevent overstrain and danger to later life. The discussion and opinions on the value of the various games

and exercises are useful also: the merits of dancing and swimming are recognized. It is curious to note that the Committee agrees with the popular verdict as to the excellencies of lawn tennis. Two points which have not received much public attention need emphasizing: one that girls cannot play hard and work hard as well. Men can, apparently, and perhaps boys can also without injury. The medical report is quite definite as to the need for balance between mental exertion and physical fatigue. A tired girl cannot do lessons. The other point is the opinion of a minority that games for girls may have an injurious effect on character, encouraging love of pleasure and frivolity in later life. This is even more serious than in the case of boys and men, who have less opportunity of wasting all their time in idleness. Such excess, free from the supervision of doctor and teacher at school, does harm in more ways than one, and is perhaps responsible for the cases of breakdown on account of which the whole attack was originally made.

Ability and Cleverness. THE recent examination of ex-Service men for posts in the Civil Service has had the unaccustomed effect of providing Parliament with materials for a lively debate, and the general public with some amusement during a period of trying holiday weather. To the usual papers in prescribed subjects, including a paper in general knowledge, the commissioners have added a set of so-called intelligence tests, such as would commend themselves to the puzzle-editor of a popular magazine. We say "so-called" advisedly, because the psychological experts are by no means agreed as to what is meant by the "intelligence" they are trying to measure. The Civil Service correspondent of the *Daily Telegraph* is probably near the mark when he identifies it with "sharpness of wits," though why the two should be regarded as equivalent we do not know. It is perhaps time to insist upon the distinction between cleverness or sharpness, which may be superficial and showy, and solid ability, which is never so. We seem to know a number of able, and even distinguished, men, both commercial and professional, who would not shine in these puzzle competitions, at any rate when working against time. The correspondent we have quoted goes sadly astray when he contrasts these tests with examinations in which the candidates "reel off glibly the length of the Amazon, the height of Everest, or the date of Magna Charta." No doubt anything is better than a bad examination, but examinations ought not to be bad. The day may come when better means of selection will be devised than the essay, the paper in general knowledge, and the best type of examination question. Meantime we frankly dislike the prospect of tests which are so easily turned to ridicule. The member of Parliament and the man in the street are after all not such fools as pedants are apt to think.

THE decision of the Board of Education to fix October 1st this year as the "Appointed Day" for the introduction of the Act of 1921 will be welcomed. The Act, of course, simply continues the previous Education Acts for administrative purposes. The Board states, when the Economy (Miscellaneous Provisions) Bill was under

La Chanson de Roland. Adapted by H. RIEU, M.A.

Edited by LOUIS LATOUR, L.-ès-L., City of London College.

La Douce France. By RENÉ BAZIN. With a Portrait of the Author, a Map of France, a new Preface, and Notes. 3s. 6d.

French Passages for Reading and Recitation (Verse and Prose) from Malherbe to Clemenceau. With Notes. 4s.

SCIENCE

Elementary Experimental Science (Physics and Chemistry). By W. T. CLOUGH, A.R.C.Sc., and A. E. DUNSTAN, D.Sc., F.I.C. With Diagrams, Examples, Examination Papers, and Answers. 4s.

Practical Science for Girls as applied to Domestic Subjects. By EVELYN E. JARDINE, M.A., B.Sc., County Secondary School, Runcorn. With Diagrams and Exercises. 3s.

First Year Physics. By C. E. JACKSON, M.A., formerly Senior Physics Master, Bradford Grammar School. With Answers. 3s.

Examples in Physics. By C. E. JACKSON. With Answers. 3s. Contains over 1,000 examples in Mensuration, Mechanics, Hydrostatics, Heat, Light, Sound, Magnetism, and Electricity.

A Handbook of Physics. By W. H. WHITE, M.A., B.Sc., A.R.C.Sc., University of London. With Diagrams, Examples, and Answers. 8s. 6d.

Elementary Experimental Chemistry. By A. E. DUNSTAN, D.Sc., F.I.C. With Diagrams and Examination Papers. 3s.

A Junior Chemistry. By E. A. TYLER, M.A., F.I.C., Swansea Technical College. With Diagrams, Problems, and Answers. 4s.

A Senior Experimental Chemistry. By A. E. DUNSTAN and F. B. THOLE, D.Sc. With Diagrams and Appendices. 7s. 6d.

The Complete School Chemistry. By F. M. OLDHAM, M.A., Senior Chemistry Master, Dulwich College, London. With Diagrams, Questions, and Answers. 7s. 6d.

In use at many schools in London, Edinburgh, Glasgow, Liverpool, Birmingham, Leeds, Bradford, York, Newcastle, Nottingham, Leicester, Oxford, Cambridge, Brighton, Bath, Cardiff, Swansea, Londonderry, &c., as also in South Africa, India, Australia, and New Zealand.

A Textbook of Inorganic Chemistry. By GEORGE SENTER, D.Sc., Ph.D., F.I.C., Principal, Birkbeck Institute, London. With Diagrams, Problems, and Answers. 8s. 6d.

In use at Aberdeen, Birmingham, and Otago (N.Z.) Universities, Imperial College and University College, London, &c.

Outlines of Physical Chemistry. By GEORGE SENTER, D.Sc. With Diagrams, Problems, and Questions. 7s. 6d.

Physico-Chemical Calculations. By JOSEPH KNOX, D.Sc., Lecturer in Chemistry, University of Glasgow. With 365 Problems, Answers, and (in many cases) full Solutions. 4s. 6d.

A First Year Course of Organic Chemistry. By A. E. DUNSTAN, D.Sc. With Plates and Diagrams. 4s.

Higher Mathematics for Chemical Students. By Prof. J. R. PARTINGTON, D.Sc., M.B.E. With 44 Diagrams. 6s.

Elementary Lessons on Plant Life. By D. G. SCOTT, M.Sc., University of Liverpool. With Illustrations and Diagrams. 4s. 6d.

British Plants: Their Biology and Ecology. By J. F. BEVIS, B.A., B.Sc., and H. J. JEFFERY, A.R.C.Sc., F.L.S. With 115 Illustrations and a full Bibliography. 7s. 6d.

A Textbook of Plant Biology. By Prof. W. NEILSON JONES, M.A., F.L.S., and M. C. RAYNER, D.Sc. With Plates and Diagrams. 7s.

Simple Lessons on the Weather. By E. STENHOUSE, B.Sc., A.R.C.Sc. With 74 Plates and other Illustrations. 4s.

Crowley's Hygiene of School Life. Edited and revised by C. W. HUTT, M.A., M.D., D.Ph. With 20 Plates and Diagrams. 6s.

A Textbook of Hygiene for Training Colleges. By MARGARET AVERY, B.Sc., M.R.San.I., Vice-Principal of Warrington Training College. With 100 Illustrations. 7s. 6d.

The Modern Teacher: Essays on Educational Aims and Methods. Edited by A. WATSON BAIN, M.A. With an Introduction by Sir W. HENRY HADOW, M.A., D.Mus., C.B.E. 10s. 6d. net.

Contents: English Literature—English Composition—Modern Languages—Classics—Mathematics—Science—Geography—History—Citizenship—Religion and Morals.

METHUEN & CO., LTD., 36 Essex Street, LONDON, W.C. 2

consideration, it became obvious that it was impossible to draft that Bill in a satisfactory manner without bringing the Act of 1921 into operation. That Bill has, however, now been postponed till the Autumn, and the Board is satisfied that no reasons exist why the Act of 1921 should not operate for all purposes except Sections 76, 77, and 93. The "Appointed Day" will therefore be October 1st.

CLERICAL ISSUES IN THE AMERICAN EDUCATIONAL CRISIS

By FLETCHER HARPER SWIFT, College of Education, Minneapolis.

THE now-famous Smith-Towner Bill was introduced into the United States Senate on October 10, 1918, by Senator Hoke Smith, of Georgia. The Bill failed of passage under the last administration. It was re-introduced by Congressman Towner on April 11, the opening day of the Special Session of the sixty-seventh Congress, and its fate now rests with the present Republican Congress. Prior to this second presentation, the Bill was modified in certain respects, which are not, however, pertinent to the present account.

This Bill, now known as the Towner-Sterling Bill, has been characterized as the most important and most comprehensive educational measure ever presented to the Congress of the United States. It embodies two fundamental provisions: the creation of a national Department of Education with a Secretary of Education in the President's Cabinet at its head, and the authorization of annual national appropriations totalling one hundred million dollars to aid and encourage states in the promotion of education. Thus, the two fundamental underlying ideas are: a National Secretary of Education, and the equalization of educational opportunities through federal aid. The proposed annual appropriations are to be apportioned among the states for the following purposes: (1) \$50,000,000 to encourage the states in the equalization of educational opportunities, and for the partial payment of teachers' salaries, providing better instruction, extending school terms, and otherwise providing equally good schools for all children; (2) \$15,000,000 to encourage the states in providing facilities for preparing and supplying better teachers; (3) \$20,000,000 to encourage the states in the promotion of physical and health education and recreation; (4) \$7,500,000 to encourage the states in the removal of illiteracy; (5) \$7,500,000 to encourage the states in the Americanization of foreigners.

The foremost educational experts in the United States were called into service in drafting the Smith-Towner Bill. The names of Coffman, Bagley, and Strayer alone would be a sufficient guarantee of a Bill formulated in conformity with the soundest principles of school administration and public finance. By the constitution of the United States, the control of education is a power reserved to the States. The Towner-Sterling Bill recognizes this, and preserves state autonomy and state control. The appropriations are to be allotted to the states on condition that the state or its local school corporations, or both, shall furnish an equal amount for each specified purpose. The control and administration of education is left entirely to the states and to local authorities, the national government exercising supervision only to the extent necessary to see that the several amounts appropriated are used by the states for the purposes specified in the Act. It is, however, in the determination of the bases upon which the various total grants are to be divided among the states that the scientific knowledge and judgment of the formulators of the Bill are most evident.

Any state's quota of the grant for teacher training is to

(Continued on page 564.)

A. & C. BLACK'S FIRST (REFORM) FRENCH COURSE

Edited by

F. B. KIRKMAN, B.A. Oxon.

PETIT COURS PRÉPARATOIRE.

By L. H. ALLISON, Organizing Mistress in Modern Languages to the West Riding Education Committee. A two-term course in phonetic transcript leading up to the *Première Année*. May be used independently. Containing Frontispiece in colours, several black-and-white illustrations, and 65 line drawings in the text. Price 2s. 6d.

Chief features: (1) The systematic and thorough training in the production of French sounds; (2) Vocabulary built up on the sounds as taught; (3) Intonation Exercises; (4) All the lessons have been practically tested in various classrooms during the last four to five years; LESSON NOTES (supplied gratis) provide all the information necessary for the teacher.

LA PREMIÈRE ANNÉE DE FRANÇAIS.

By F. B. KIRKMAN, B.A. A Day passed by an English Boy in Paris. Sixty-five illustrations, of which four are in colour. Tenth edition. Price 4s. 6d.

Chief improvements in this edition: (1) New *Leçons préparatoires*, giving systematic instruction in pronunciation, both with and without use of phonetic script; (2) Text of *Un Petit Anglais à Paris* shortened, and certain chapters rewritten; (3) Exercises rewritten, brought up to date, and reset in larger type; one Grammatical point each exercise; Systematic revision of the Grammar Tables simplified; verb list added; (5) Important new pronunciation section for periodic practice throughout the year; (6) Only one wall picture required: the *Famille Pascal*; (7) SUMMARY OF METHOD at the end of the book, as well as separately published detailed FRENCH LESSON NOTES on each starred lesson; (8) Lesson Notes so arranged that a teacher can take up the book at any point without difficulty.

TRANSCRIPTION PHONÉTIQUE LA PREMIÈRE ANNÉE DE FRANÇAIS. LEÇONS PRÉPARATOIRES.

Transcribed by Prof. D. L. SAVORY, M.A. Illustrated. Price 1s. 6d.

LESSON NOTES

To accompany the above two editions of LA PREMIÈRE ANNÉE.

Gives full particulars as to how to make the best use of the book. Price 1s.

SOIRÉES CHEZ LES PASCAL.

By F. B. KIRKMAN, B.A. A First Reading Book. Evenings with the Fairies. Five Coloured Plates. Second Edition, completely revised. Price 1s. 4d.

FIRST FRENCH SONG BOOK.

By R. B. MORGAN, B.Litt. Forty-four Songs, of which fifteen are in Phonetic Script. Airs and Tonic Sol-fa. Third Edition. Price 1s. 4d.

COLOURED WALL PICTURE.

To accompany *La Première Année de Français*. *La Famille Pascal à Table*. Drawn from French Models and Photographs. Measurement: 45 by 35 in. Price, on linen, with rollers, varnished, 15s. net; unmounted, 5s. net. Write for post card (reproduction in colour facsimile).

Published by A. & C. BLACK, Ltd.,
4, 5, and 6 Soho Square, London, W.1.

NEW BOOKS from HARRAP'S LIST

TRAINING IN LITERARY APPRECIATION

By F. H. PRITCHARD, Author of "English Extracts and Exercises." Crown 8vo, 208 pages, 2s. 6d.

This volume is a practical guide to just taste in the best books. The publishers are confident that this work will be found as stimulating and practical as Mr. Pritchard's first two books.

A PRACTICAL TRAINING IN ENGLISH

By H. A. KELLOW, M.A. Revised and Enlarged Edition.

"I congratulate you cordially on producing a most creditable working text-book, full of sound common sense, and showing a keen appreciation of the needs of the classroom."
 PROF. JOHN ADAMS, M.A., B.Sc.

A YEAR'S WORK IN ENGLISH

By J. W. MARRIOTT. Second Impression, 176 pages, 2s. 3d.

This book is intended for pupils from twelve to seventeen years old. The work is divided into forty weeks, each of which contains (a) material for thinking exercises, including tests of intelligence and ingenuity; (b) opportunity for self-expression, imaginative effort, and original experiment; (c) an introduction to some great author or masterpiece of literature.

READINGS FROM RUSKIN

Selected and Edited by SUSAN CUNNINGTON. With Memoirs and Notes. Crown 8vo, boards, 156 pages, 2s.

READINGS FROM THE BIBLE

Chosen from the Authorized Version for school use by B. L. K. HENDERSON, M.A., D.Lit., and F. G. RUSSELL, B.A., Mus.Bac., Haberdashers' School, Hampstead. 240 pages, 2s. This book closely follows the recommendations in the Report of the Departmental Committee, 1921.

TOLD THROUGH THE AGES. 2s. 6d.

NEW VOLUMES.

46. **STORIES OF THE SAINTS.** By GRACE HALL.
47. **THE STORY OF ST. ELIZABETH OF HUNGARY.**
48. **IN FEUDAL TIMES.** By E. M. TAPPAN, Ph.D.
49. **THE HIGH DEEDS OF FINN.**

ILLUSTRATED EASY STORIES FROM ENGLISH HISTORY

By LUCY DALE. With Four Plates in Colour and Line Illustrations. Crown 8vo, 248 pages, 2s. 6d. Also in Two Parts, each 1s. 6d.

THE BEGINNER'S HISTORY OF ENGLAND

Second Edition. By E. W. MILLER, B.A. With Maps and Illustrations. Small Crown 8vo, 280 pages, 2s. 6d.

This volume is designed to follow the study of history in story form.

A SHORT SOCIAL AND POLITICAL HISTORY OF BRITAIN

By ROBERT L. MACKIE, M.A. Fully illustrated. Crown 8vo. Second edition. With new Synopsis. In Two Parts, each 2s. 6d.; or Complete, 440 pages, 4s. 6d.

THE BEGINNERS' ANCIENT HISTORY

By J. B. NEWMAN, M.A. Illustrated. Crown 8vo, 176 pages. 2s. 3d. This is an attractively written account of the Ancient World from the earliest days of Egypt and Assyria down to A.D. 1000.

THE BEGINNERS' MODERN HISTORY

By J. B. NEWMAN, M.A. Illustrated. Crown 8vo, 160 pages. 2s. 3d. From the year A.D. 1000 to the present time.

THE STORY of MANKIND

By HENDRIK VAN LOON

Size 9½ x 6½ in.

512 pages: 140 line, 9 four-colour, and 8 half-tone illustrations by the Author.

Price 12/6 net.

ECONOMICS

FIRST PRINCIPLES OF POLITICAL ECONOMY

By Prof. CHARLES GIDE. Authorized Translation by ERNEST F. ROW, B.Sc.

Crown 8vo, 160 pages, 2s. 6d. This work by one of the greatest living authorities on the subject is written in very simple language.

LA FRANCE ET SA CIVILISATION

A History and Description of France in French from the Revolution to 1920. By Prof. DESSEIGNET, Reading University College, and Prof. LANSON. For Senior Classes and Students. Crown 8vo, 296 pages, 5s. net.

MANUAL OF FRENCH PRONUNCIATION AND DICTION

By J. W. JACK, M.A. With copious Exercises. Large Crown 8vo, 256 pages, 7s. 6d. net.

A complete course in French phonetics, meeting a need not yet filled for English students.

J.-J. ROUSSEAU: VIE ET ŒUVRES

Avec des Notes explicatives par le Professeur ALBERT SCHINZ. Crown 8vo, 400 pages, 7s. 6d. net.

This careful study by the editor of the well-known *Selected Poems* by Victor Hugo is written entirely in French. A considerable part of the book consists of extracts from Rousseau's chief works.

LA CLASSE EN FRANÇAIS

By E. GOURIO, Professeur au Lycée Montaigne. With many Illustrations, Exercises, and Vocabularies. Crown 8vo, 280 pages, 3s. Also Part One, 144 pages, 1s. 9d.

A Direct-Method Book with many new features.

QUE FAIT GASTON ?

A Reader for Young Beginners. By FANNIE PERLEY. With Questionnaire and Vocabulary, and many Illustrations. Crown 8vo, 144 pages, limp cloth, 1s. 9d.

Only five hundred and fifty words are used in this attractive book, and these are such as are mainly employed in ordinary conversation.

ADDITIONAL EXERCISES

Based on *Modern French Grammar*. By M. NINET. 96 pages, sewed, 1s.

DER GROSSE KRIEG (1914-1918)

Lectures Allemandes sur la Grande Guerre, par Professeur A. PINLOCHE. With German-French vocabularies. Crown 8vo, 400 pages, 5s. net.

This excellent collection of German official documents and extracts from German special correspondents is suitable for advanced German students, and especially for Army classes.

TESTS IN GERMAN COMPOSITION AND GRAMMAR

For Middle Forms. By H. J. B. WANSTALL, M.A., Wellington College. Small crown 8vo, 64 pages, limp, 1s. Key, for Teachers only, 3s. 6d. net.

STUDIES IN SPANISH-AMERICAN LITERATURE

By ISAAC GOLDBERG, Ph.D. Introduction by Prof. FORD, Harvard University. 10s. 6d. net.

This book is the first work of its nature to be published in English. It reveals a culture that will surprise those who think that Spanish-America is nothing more than a breeding-place of revolutions.

TEN SPANISH FARCES

Of the Sixteenth, Seventeenth, and Eighteenth Centuries. Edited, with Introduction, Notes, and Vocabulary, by GEORGE T. NORTUP, Ph.D. Crown 8vo, 270 pages, 5s. net.

This is a scholarly book, interesting to all students of the Spanish drama.

SPANISH COMMERCIAL PHRASES

Arranged alphabetically. By R. LUSUM. Small crown 8vo, 160 pages, 2s. 6d. net.

CANCION DE CUNA

By G. MARTINEZ SIERRA. Edited with Exercises and Vocabulary by Prof. A. M. ESPINOSA. 164 pages, 2s. 6d.

"This volume supplies the text of a play produced in 1911. The introduction contains a full account of the work of Gregorio Martinez Sierra."—*Times Educational Supplement*.

MARIUCHA

Comedia en Cinco Actos, por BENITO PÉREZ GALDÓS. Edited, with Full Introduction, Notes, and Vocabulary, by S. GRISWOLD MORLEY, Ph.D. Small crown 8vo, xlviii + 195 pages, 3s. 6d.

This play is the most interesting and suitable of all Galdós's dramas for English students.

Write for further particulars to—

be determined upon the basis of the ratio of the total number of persons teaching in the public schools of that state to the total number of public school teachers in the United States. The grant for equalizing educational opportunities is to be apportioned among the states, one-half on the foregoing basis, and one-half in the proportion which the number of children between the ages of six and twenty-one in that state bears to the total number of such children in the United States. The grant for physical education and recreation is to be divided among the states in proportion to their total population. The grant for removal of illiteracy is to be divided upon the basis of the proportion of total adult illiterate population of the United States residing within the respective states. The grant for Americanization is to be apportioned among the states upon the basis of the proportion of the total foreign-born population of the United States residing within the state.

No Educational Bill has ever attracted more widespread attention in the United States. The arguments for its passage are neither academic nor hypothetical; they are, rather, definite and concrete situations and conditions. The first selective draft revealed that there were in the United States no less than 700,000 illiterate males between the ages of twenty-one and thirty-one. Again, it was found that more than 700,000 of the men examined for military service were physically unsound, and that a large proportion of the defects discovered could have been prevented or at least remedied by proper attention in youth. Equally convincing were the revelations made, which argued for national subsidies for Americanization, for teacher training, and for equalizing educational opportunities.

In support of the demand for a national Department of Education, emphasis has been placed upon the fact that at the present time such federal administration of educational affairs as exists is parcelled out among more than eighty different bureaux, boards, and divisions of the several departments of the government; that the Bureau of Education is almost entirely excluded from performing any national educational services other than collecting statistics and disseminating information. In other words, it is prohibited by its very organization and subordinate position, as well as by its meagre budget, from exercising the leadership which should be exercised by the agency representing the national government in educational affairs.

It is not surprising that a Bill fraught with such possibilities for education, and following immediately on the heels of such dismaying revelations, should have elicited wide-spread support. To quote a recent bulletin of the National Education Association: "Every state superintendent of public instruction in the United States, with possibly one or two exceptions, is supporting this Bill. The presidents of state teachers' colleges and state normal schools are unanimous in their support of the measure. The city and county superintendents of the country have repeatedly endorsed it, and are individually giving it their individual support. College presidents and professors of education who are in touch with public school conditions and are public-school minded, and, finally, more than six hundred thousand public school teachers in the United States, are its earnest advocates. Hundreds of Chambers of Commerce, Rotary Clubs, Kiwanis Clubs, Women's Clubs, and other civic organizations have passed resolutions endorsing it. The following national organizations are all supporting the Bill: National Education Association, American Federation of Labour, American Federation of Teachers, General Federation of Women's Clubs, National Congress of Mothers and Parent Teacher Associations, American Library Association, National Council of Jewish Women, Association of Collegiate Alumnae, Patriotic Order Sons of America, National League of Women Voters, and National Society Daughters of the American Revolution."

Despite the dire conditions to which the Towner-Sterling

(Continued on page 566.)

NEW TEXT-BOOKS

Written by experienced teachers, thoroughly up-to-date, and carefully produced, they merit the close attention of all teachers.

A Geography of Great Britain and Ireland

By A. WILMORE, D.Sc., F.G.S. With numerous illustrations and maps. Ready shortly. [*Bell's Geographical Series.*]

This new book will be especially useful to students reading for School Certificate, Oxford and Cambridge Locals, and Matriculation Examinations. It deals with Great Britain and Ireland regionally, and shows how and why one part differs so widely from another in structure, climate, agriculture, density of population, &c. The principles involved are illustrated by the study of clear, concrete examples, and the subject matter is frequently explained by the help of bold diagram-maps.

The "Explorer" Geographies

The first two volumes in this new series will be:

THE AMERICAS. By JAMES BRUCE, B.A. (Hons. Oxon.), B.Sc. (Lond.). [*Ready shortly*]

AFRICA AND AUSTRALASIA. By J. THOMAS, M.A., formerly H.M. Inspector of Schools. [*In the press*]

These readers are planned on entirely novel lines, suitable for young students over eleven years of age. The first part of each volume describes the discovery of the continent dealt with, considerable use being made of the writings of the original discoverers. The second part provides a broad general survey of the physical, economic, and political geography of the continent. The illustrations, which include a number of double-page plates, form a valuable feature of the volumes.

Classics of Scientific Method

Edited by E. R. THOMAS, M.A., M.Sc., Head Master of the Royal Grammar School, Newcastle-on-Tyne.

I. THE DISCOVERY OF THE CIRCULATION OF THE BLOOD. By CHARLES SINGER, M.D., D.Litt., F.R.C.P., Lecturer on the History of Biological Sciences in the University of Oxford. Illustrated. 1s. 6d. net.

Further volumes in active preparation

The object of this series is to show by quotation from original papers, with a complete explanatory introduction, the lines of development along which human thought achieved certain fundamental discoveries.

Completion of M^r. Foster's Geometry.

Solid Geometry

By V. LE NEVE FOSTER, M.A., Eton College. 3s. 6d.

[*Bell's Mathematical Series:* General Editor, Prof. W. P. Milne, D.Sc.]

In this third volume, as in the two previous volumes on **PLANE GEOMETRY** (3s. each) the theoretical and practical aspects of the subject are developed *pari passu*. Ample practice is given in numerical work applied to simple and obvious figures in space, so that the pupil approaches the formal propositions with his mind well stocked with concrete examples of the figures and properties of Solid Geometry.

A New Course for Evening Schools

Concise French Course

Adapted for the use of British Students from the French of P. A. DESSAGNES, Professeur au Lycée Louis-le-Grand, Paris, by MARC CEPPI. Illustrated. 2s. 6d.

The rate of progress is much more rapid than in ordinary school courses—essentials only are dealt with, and the exercises are on a novel plan. Much of the subject matter is based on simple scientific experiments.

A Short History of Our Religion from Moses to the Present Day

By D. C. SOMERVELL, M.A., Second Edition. 6s. net. Also in four parts, bound in Manilla covers. 1s. 6d. each.

The Rev. C. A. Alington D.D., Head Master of Eton writes: "I think it admirable. It seems to me to have been written in exactly the right tone and temper. . . . I really feel the greatest admiration for the way in which you dealt with a mass of facts without letting them become either disjointed or dull. . . . I should think the book ought to be of the greatest use in getting Divinity decently taught."

York House, Portugal Street, W.C. 2

BELL'S NEW AND STANDARD TEXT-BOOKS

HISTORY

Scenes from British History. Part I.

From the Earliest Times to the end of the Middle Ages. By W. W. HENDERSON, M.A., Govan High School. Illustrated. 1s. 9d.

These simple and graphic descriptions of the domestic customs, social institutions, and ways of life of the British people in different epochs will, it is believed, provide a more ready approach to the history of our present political, social, economic, and religious tendencies than a bare summary.

Modern European History. By C. D.

HAZEN, Professor of History, Columbia University, Author of *Fifty Years of Europe*, etc. With 154 illustrations and 35 maps. 7s. 6d. net.

"Contains a fine array of historical portraits and other adornments. It is undoubtedly a first-rate text-book for the period 1789-1919." *Journal of Education*.

GEOGRAPHY

The Groundwork of Modern Geography. An Introduction to the Science of Geography.

By A. WILMORE, D.Sc., F.G.S. Second edition. 6s. net.

[*Bell's Geographical Series*. "One of the best arranged and succinct books we have seen." *Science Progress*.

The British Empire Beyond the Seas.

An Introduction to World Geography. By MARION I. NEWBIGIN, D.Sc. Third edition, revised. 5s.

"Attractive for the skill with which the human, historical, and economic interests are interwoven with physical conditions. . . well illustrated. . . We hope it may have wide use."—*Cambridge Review*.

Bell's School Atlases. A series of post-war

Atlases published in association with "Geographia," Ltd. Detailed prospectus on application.

FRENCH

Nouveaux Contes Français. By MARC

CEPPI, Senior Modern Language Master, Victoria College, Jersey. With or without vocabulary. 2s.

The success of Mr. Ceppi's *Contes Français* (2s.) has induced him to prepare a similar volume. The tales are short, bright, and attractive. They are written in simple French, and carefully graduated. Much care has been taken in the use of tenses. There is a full vocabulary and carefully prepared questionnaire and exercises.

Le Français. A Practical French Course. By MARC

CEPPI and LL. J. JONES, B.A., Whitgift School. Part I, 3s.; Part II, 3s. 6d.

This new course, founded on the recommendations of the Government Committee on Modern Languages, 1918, is being extensively adopted. *Part I* is already in its 28th, and *Part II* in its 11th Thousand. The course is written on semi-direct lines, and the subject-matter is closely related to the everyday life of the average student.

An edition of *Part I* is issued for use with the Direct Method.

ENGLISH

A Book of Verse. Chosen for Students at Home

and Abroad by Sir HENRY NEWBOLT. Second impression. 2s.

The aim of Sir Henry Newbolt's new anthology is to furnish an introduction to English thought and language. The poems he has selected are broad and universal both in subject and mood. Modern poetry is well represented, a large number of the poems being copyright.

"Teachers will welcome this delightful book of verse, and will find inspiration in it."—*Scottish Educational Journal*.

Translation and Translations. Theory and

Practice. By J. P. POSTGATE, Litt. D., Emeritus Professor of Latin, University of Liverpool. 6s. net.

A critical examination of current views on the theory and practice of translation from foreign languages. The second part of the volume consists of carefully selected illustrative renderings by the author, chiefly in verse, of passages from Latin, Greek, and English classics.

MATHEMATICS AND SCIENCE

Elementary Algebra. By C. V. DURELL, M.A.,

Senior Mathematical Master, Winchester College; G. W. PALMER, M.A., late Master of the Royal Mathematical School, Christ's Hospital; and R. M. WRIGHT, M.A., Eton College. With detailed introduction and full answers, for teacher's use, 8s. 6d.; without introduction and with only select answers, 7s. Also in parts, details on application.

"Nearer the ideal book for beginners than any we have yet seen." *Mathematical Gazette* on Part I.

A Concise Geometry. By C. V. DURELL, M.A.

Second edition. 5s.

"Supplies a large number of easy and varied examples. . . The method seems excellent."—*Times Educational Supplement*.

A Short Algebra. By H. P. SPARLING, M.A.,

Assistant Master at Rugby School. 2s. 4d.

"A varied and stimulating series of examples."—*Educational Times*. "Will fulfil a very useful function."—*Journal of Education*.

Examples in Practical Mathematics

for Technical and Secondary Schools, Part I. By A. DAKIN, M.A., B.Sc., Head Master Stretford Secondary School. 2s. 6d.

[*Bell's Mathematical Series*: Editor, Prof. W. P. Milne, D.Sc.]

These exercises are, in the main, the examples of the same author's *Practical Mathematics* (5s.). Sections on Mensuration and Logarithms have been added, and also Logarithmic Tables, and a few other changes have been made.

Bell's Mathematical Tables. By L.

SILBERSTEIN, Ph.D. Demy 8vo. 16s. net.

A collection of tables, handy in shape and size, suited to the daily "practical" work of the mathematician and the theoretical physicist. The first part contains the usual logarithms of numbers and of the fundamental trigonometric functions. The second and larger part contains a collection of mathematical formulae, definitions, and theorems, together with tables of the more important special functions, such as elliptic integrals, Bessel functions, and spherical harmonics, Fresnel integrals, &c.

A Text-book of Machine Construction and Drawing. By H. E. MERRITT, B.Sc.

Eng., and M. PLATT, M.Eng., Lecturers in Engineering at the West Ham Municipal College. Fcap 4to. With 8 plates and over 200 text-figures. 7s. 6d. net.

The object of this book is to provide a thorough and comprehensive exposition of the subject for Engineering students. It adequately covers Intermediate requirements, while owing to the up-to-date character of the illustrations it will also be found of service to more advanced students as a book of reference.

Readable School Physics. By J. A. COCH-

RANE, B.Sc. With 8 plates and over 60 illustrations in the text. 2s. 4d.

[*Bell's Natural Science Series*: Editor, E. J. HOLMYARD, M.A., Head of the Science Department, Clifton College.]

"We can confidently recommend the book for use in schools. . . It will be found of the greatest possible value."—*Chemical News*. "The book is a praiseworthy effort and should be popular." *Educational Times*.

First Lessons in Practical Biology.

By E. W. SHANN, B.Sc., F.Z.S., Biology Master at Oundle School. With 71 illustrations. 5s.

Intended to meet the need for an elementary book suitable for the lower fifth forms who are ready to begin the serious study of biology. The author's aim is to inculcate habits of accurate observation, of concise description, and of intelligent reasoning, as well as to create a background for the further study of biology.

Full particulars of Messrs. Bell's other mathematical and scientific works, including the well-known text-books of Algebra, Arithmetic, Geometry and Trigonometry, by Messrs. PENDLEBURY, BAKER & BOURNE, BORCHARDT and PERROTT, &c., and the standard works on Chemistry by Prof. ALEX. SMITH, will be gladly sent on application.

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2.

Bill owes its origin, and despite the wide-spread support it has received, its passage is by no means assured, owing to the organized opposition with which it has increasingly met. The intensity of the opposition, as well as the claims of both sides of the controversy, are set forth in a recent issue of the *Literary Digest*. "War to the hilt," observes this journal, "has apparently been declared by Catholic societies on the Smith-Towner Federal Education Bill. Protestant adherents of the Bill see in it splendid possibilities for the improvement and extension of education, and believe, says the *Christian Century*, that it will 'meet the immediate need for Americanization work which was so sadly revealed by the war, and which will increase as the new tide of immigration rolls in.' But the Catholics fear that the Bill is 'ultimately aimed at the parochial schools,' and that it purposes 'to have all private and public education at the mercy of a federal bureaucracy.'"

"Arrayed with the Catholic press against the Bill, representative bodies like the National Council of Catholic Men, the National Council of Catholic Women, and the Knights of Columbus, are also sternly set against its provisions. In a letter to Catholic organizations, the National Council of Catholic Men warns them that the Secretary of Education and his subordinates 'will always have in view the possibilities of using the educational system in furtherance of their own partizan interests. The public school system will become a vast political machine,' and this machine, it is charged, 'will give a federal administration the opportunity of creating an educational autocracy—really endangering the liberty of thought and information, which is a basic right of the people.'"

"Speaking for the organization of which he is the head, James A. Flaherty is quoted in the *Boston Pilot* (Catholic) as saying:

"The Knights of Columbus defeated the proposal, in Michigan, to abolish parochial schools. The Smith-Towner Bill is also ultimately aimed at the parochial schools. If these schools were abolished it would cost the people of the various states something approaching a billion dollars in taxes to provide the education that these schools contribute every year. The Knights of Columbus denounce the Smith-Towner Bill as an attempt to erect a permanent tyranny over the minds of our children."

"Turning now to the other side, the *Christian Science Monitor* observes: 'There is not much doubt about the reason underlying Catholic opposition. They are essentially the same that are raised here and there whenever there is a movement calling forth increasing expenditures for public education wholly outside of Roman Catholic control. In proportion as Roman Catholic sentiment favours education in its parochial schools, it tends to object to continuing or increasing support of public schools.' More bitter comment, however, comes from other quarters. 'It would be too bad if the interference of a bigoted priesthood should prevent the adoption of a Bill which contains so many promising features,' declares *The Reformed Church Messenger*, remarking that 'the all too familiar protest against federal autocracy, and the violation of home rule principles is, as usual, employed to hide the coloured gentleman in the woodpile.'"

Of no small interest in this connexion are articles appearing in Freemason publications. The *Cataract News*, a Masonic weekly, after strongly endorsing the Bill, continues:—

Contrast the resolution of the American Federation of Labour, with the resolution offered by the Federation of Catholic Societies:—

"Resolved, that this thirty-ninth convention of the American Federation of Labour, in conformity with the recommendation of the preceding convention, indorse the Educational Bill, H.R. 7, and instruct the president and executive council to use the full influence of the American Federation of Labour in its support."

"Resolved, that we, the representatives of the Catholic Federated Societies of Louisiana, are unanimously opposed to such measures as both un-American and un-Christian, and

earnestly urge our people to support our Christian schools with increased unanimity and loyalty, and to combine with all Christian and patriotic citizens in opposing by voice and pen and vote and every constitutional instrument, the advocacy and adoption of those subversive and destructive educational schemes, thus erecting an impregnable barrier against this sinister menace to religion and constitution, to family and nation."

It is unnecessary to continue further this account of the Smith-Towner controversy, or of the forces involved. That the United States is facing the gravest educational crisis in its history is the opinion voiced by educational leaders on every hand. From every state in the Union come reports of totally inadequate revenues, hundreds, if not thousands, of closed schools, an ominous shortage of trained teachers and frantic attempts on the part of Boards of Education to eliminate from the curriculum, in the name of economy, social and industrial studies, and revert to the narrow policies of generations gone.

To one who views the situation in its entirety, it is little less than astounding that what has been commonly regarded as fundamentally a financial crisis should become permeated with ecclesiastical antagonisms. To those who have not followed the increase of ecclesiastical efforts in educational affairs, it is difficult to understand how in a country famous—one might almost say notorious—among the nations for its complete divorce of state and church, and its thorough-going secularization of education, the fate of an educational measure, the most important in all history, may very probably be determined by sectarian considerations. Nevertheless, the fact remains that in a period of social and educational reconstruction, the most difficult as well as probably the most important ever faced by the United States, the greatest of all national issues is temporarily beclouded, and perhaps destined to be finally settled through the rise and usurpation of issues clerical.

INTERNATIONAL MORAL EDUCATION CONFERENCE

BY FREDERICK J. GOULD, Hon. Secretary International
Executive Council.

THE Rt. Hon. Sir Frederick Pollock, Sir Francis Younghusband, Mr. St. G. L. Fox Pitt, Prof. J. S. MacKenzie, Mr. Cloudesley Brereton, and a few colleagues, found themselves, as the International Executive Council of the Moral Education Congress, faced, at the end of 1919, with the very difficult task of reorganization after the war. Paris had been fixed for the Third Congress, but this plan was now unworkable. At length communications with oversea friends were re-established, Geneva was chosen as the place of meeting, and a Swiss Organization Committee, appointed in September, 1921, speedily mapped out arrangements, and secured adequate support. The President of the Swiss Committee, Dr. Ad. Ferrière, and his assistants in the good work had their reward in a very successful Congress, July 28 to August 1, 1922, held at the Aula of the University of Geneva, attended by five hundred members drawn from thirty nationalities and linked with twenty-nine National Committees (including Uruguay, Turkey, Tcheco-Slovakia, Poland, Latvia, Hungary, Canada, &c.). A special session assembled at the Secretariat of the League of Nations, where Mr. Gustav Spiller (secretary of the First Congress, at London University, 1908) presided, and the members were cordially received, on behalf of the Société des Nations, by Dr. Inazo Nitobé, Director of the Section of International Bureaux. Another pleasant connexion with the League was established when the Director of the Labour Office, M. Albert Thomas, appeared on the University platform and eloquently emphasized the value of education in building up a sound public opinion on economic and civic issues.

At the Second Congress, at The Hague, 1912, more than

EVERYTHING EDUCATIONAL

FOR PUBLIC AND SECONDARY SCHOOLS.

STATIONERY, REQUISITES, FURNITURE.

EXERCISE BOOKS.

Superior Paper. Artistic Style.
Exceptional Value.

Price 36/- per gross.

Containing 80 pages; bound in stiff leatherette cover with artistic tinted label, which can be printed with name of School. The books are supplied in various rulings.

We hold a huge stock of Exercise Books in all qualities and prices, from 11/6 per gross, ready for immediate orders.

SCIENCE BOOKS AND BLOCKS. SCIENCE PAPERS.

We have a very large stock of Science Books, Blocks, Graph Books, and Papers ruled in Centimetre and Millimetre Squares, Centimetre and Two-millimetre Squares, Tenths and Half-inch Squares, Fifteenth and One-third-inch Squares.

WE CARRY THE LARGEST STOCK of all kinds of School Stationery, including:

Exercise Books and Paper,
Drawing Books and Paper,
Nature Note Books,
Note Books,
Examination Paper,
Foolscap Paper,
Book-Keeping Books,
Brushwork and Colour Books, &c.,
so that customers' requirements can be
IMMEDIATELY SUPPLIED

LOOSE LEAF DEVICES.

HOLBORN RING BOOK.

A stiff cloth cover with nickel-plated rings affixed to cover that open and close quite easily by pulling one ring apart to open, and snapping it together to close.

Covers only from 1/9 each.

Guides, per set of 5, 6d.

Paper to fit, 2/4 ream.

FILING CASES WITH CORDS.

A cloth case with two flanges inside eyeletted, with two holes through which cords are passed to hold several Exercise Books or loose leaf paper.

Covers only, from 1/2 each.
Guides, per set of 5, 6d.

Paper punched to fit, 2/4 ream.

FLAT FILES.

A strong Manilla cover with a flange inside containing two brass pins, paper with punched holes are placed on the pins and kept in place by a metal fastener.

Files, from 4½d. each.

A cheaper quality from 3½d. each.

PAPER.

Writing paper in various rulings. Drawing paper, Graph or Science paper kept in stock done up in Reams, Blocks, or in packets of 50. All with punched holes to fit the respective File.

TABLE DESK.

Showing Top "Sloping."

These Table Desks are made in Single and Dual lengths with:

- (a) Locker Top (as illustration).
- (b) Enclosed Bookshelf.
- (c) Plain Hinged Top.

They can be used flat as a Table or raised to a sloping position for writing.

The edge nearest the pupil is always the same height.

Full details and prices on application.

Folding Desk No. 181, 16/6 each.

Do., fitted with folding Bookshelf underneath, 19/6 each.

"Esavian" Patent Sliding and Folding Partitions.

Science Laboratory Fittings.

Blackboards and Easels.

Scholars' and Masters' Desks.

Tables, Chairs, and Stools.

Museum and Stock Cupboards, and all kinds of Furniture Fittings.

Promptly supplied.

THE EDUCATIONAL SUPPLY ASSOCIATION LTD
STEVENAGE HOUSE, 40-44 HOLBORN VIADUCT, LONDON, E.C.1

three hundred papers were presented. Appalled by the memory of this vast pile of literature, printed in Dutch, German, French, and English, the organizers of the Geneva Congress accepted only thirty-three papers (published in French by Delachaux and Niestlé, of Neuchâtel)*, and limited the topics to two, namely :

- (1) History Teaching in its International Aspect.
- (2) The Motive of Service.

The discussions were conducted in an amicable spirit, in spite of divergences of views on life, religion, and the cosmos ; and it may be well to record the simple principles which guided the speakers, namely :

OBJECT : To enlist the active co-operation of all, irrespective of race, nation, and creed, in promoting the work of Moral Education.

BASIS : The Congress does not advocate the views of any society or party, but affords to all who are interested in Moral Education, whatever their religious or ethical conviction, nationality, and point of view, an equal opportunity of expressing their opinions and comparing them with those of others.

Under the head of "Social Service" many excellent speeches and papers were delivered, but perhaps, in spite of the governing idea embodied in the general subject, they suffered from a degree of dispersiveness. One orator dwelt impressively on "Temptation" ; another on problems connected with "Money" ; and, to the joy of all the *Eclaireurs* and *Eclaireuses* of the city, the founder of the Scout Movement, Sir R. Baden-Powell, joined the Conference, gave a straightforward and simple statement of Scout ideals, and defended it from the charge of "militarism."

But, on the side of History, a remarkable coherence of minds and singleness of purpose were manifest. Barth, Ewald, Kawerau, Halecki, Bannerjee, Tchou Wei, Vila, Gooch, Cousinet, and the rest, all practically (not excluding F. W. Foerster, who has certain "confessional" leanings) rested their educational faith in the moral, civic, and evolutionary values of the story of humanity. Mr. Clouesley Brereton, in his paper on "History in Secondary Schools," added a consideration which merits attention. He spoke of a series of new social factors :

"These, in brief, are the introduction of universal suffrage, the consequent formation of an independent party of Labour, and, above all, the general extension of free and compulsory education. In my opinion the time will sooner or later come when the masses will demand, through their new representatives, that national history shall be written and taught after a new type in the schools. When this moment arrives, the schools will face a problem before which the 'religious difficulty,' once so insistent, will appear insignificant."

It was very natural that such topics should be dealt with in the memorable session held at the League of Nations Secretariat. One felt that, though the programme of the Congress could not be officially incorporated in the Covenant of the League, its aims were entirely consistent with the great "International" which, in the name of fifty-one countries, has fixed its Seat at Geneva.

The United States section of the 1912 Congress was so numerous that it issued a separate volume of American papers. In 1922 the American collaboration was far more modest in extent. Among the five papers sent from the New York centre may be particularly noted one, on "Education for Altruism through the Study of Life," by Dr. F. C. Sharp, Professor of Philosophy at the University of Wisconsin. Dr. Sharp has, for many years, pressed the subject of moral training upon the American public, and his "Education for Character" is a book of great value. On the other hand, Asia has taken a step nearer to full co-operation with the Congress. India formed a Committee,

of which the Hon. Khan Bahadur M. Shafi, Minister of Education at Delhi, was the principal member. Mr. Abdullah Yusuf Ali sent a paper on "History-teaching in India," and Chinese, Japanese, and Hindu speakers at the Congress helped to remind the European audiences that the East has much to say on educational questions, and the time has come when it must be heard.

The Congress closed after re-shaping its International Executive Council (now to consist of eight British members and thirty-two non-British), resolving to institute an inquiry into history-teaching, approving the establishment of an International Moral Education Bureau at The Hague (the Congress representative of which is S. L. Veenstra, 196 Laan van N. Oost Indie, The Hague), and agreeing to a motion of which the exact terms may here be of interest :

"That all persons who have taken tickets for the Congresses of 1908, 1912, and 1922, or were otherwise known as supporters of these Congresses, and all persons who, in July, 1922, constituted the various National Committees in connexion with the Congress, shall, with additions made by each National Committee to its own list, form a *Permanent Association*, working through the National Committees, and connected through the National Committee secretaries with the International Executive Council ; each National Committee arranging its own finance ; the object of the Association being to keep the educationalists of the world in sympathetic touch, and to assist in creating a universal conscience of mankind. For this purpose the Executive will preferably act through the International Moral Education Bureau."

It is too early to speak with certainty, but the Fourth Congress will possibly be held in Rome.

THE CONFERENCE OF THE CENTRAL ASSOCIATION FOR MENTAL WELFARE

THE main topics under discussion at the July Conference, which was largely attended by Justices, educationists, and members of the medical and legal professions, were the methods of ascertaining and dealing with defectives of all ages, particularly with those who showed tendencies to delinquency. Delinquents do not appear to differ in the mass from other defectives, but their crimes bear the hall mark of inefficiency in the same manner as all their other actions. When it is pointed out that an undue proportion of the prison population present a subnormal mentality, it has to be remembered that the more intellectual offenders are probably rarely detected, so that prisoners cannot be regarded as a fair random sample of delinquents in general. With their ready suggestibility defectives are easily led into crime, the actual details of which depend on proximity and opportunity ; it is therefore the more important to secure that those who at an early age are recognized as being in need of care and control on account of mental weakness should receive this, particularly in the dangerous age of adolescence. This receiving general approval, an interesting discussion arose on the respective merits of probation and commitment to certified schools in the case of juvenile offenders. A stipendiary magistrate of great experience pointed out the advantages of giving a fresh chance in the majority of cases, to be countered by the statement from a medical officer attached to juvenile and other courts that more often this did not mean a fresh chance at all but the same chance repeated ; since much of the trouble arose from environmental conditions and a probation which returned the subject to the old conditions was not a fair remedial measure. On the whole the opinion appeared to be that it was better to apply the effects of new surroundings early rather than later in life, and that an ordinary or special industrial school afforded a better hope of establishing adequate social sentiments than did

* The first edition was issued from the Congress Secretariat, Institut Rousseau, Geneva, at 20 Swiss francs, in two vols., 186 pp. and 218 pp.

MODERN DEVELOPMENTS IN EDUCATIONAL PRACTICE.

By JOHN ADAMS, M.A., B.Sc., LL.D.,

Sometime Professor of Education in the University of London.

The purpose of the book is to provide a survey of the many recent changes that have taken place in educational practice, and to account as far as possible for their origin in terms of the psychology of to-day. The newer plans are described, explained, and criticized, and particularly in their relations to the conditions of schools as they are and as they are likely to be in the immediate future. Teachers will thus be placed in a position to make an intelligent choice among the various schemes that are at present claiming their attention.

"An altogether admirable volume."—*Aberdeen Free Press*.

PSYCHANALYSIS IN THE CLASSROOM.

By GEORGE H. GREEN, B.Sc., B.Litt.,

Diploma in Education (University of Oxford), &c.

The author's theory is based upon the practical investigation of a great number of cases similar to those which so often puzzle the teacher. He is primarily concerned with the wholesome development of normal pupils, rather than with the treatment of pathological cases.

Prof. W. McDougall, F.R.S., in his preface to the American Edition, says: "Mr. Green has written a book which will reward with new insight every school teacher who may read it."

"A sincere and valuable contribution to the body of educational psychology."—*The Times*.

"We unreservedly recommend it to all interested in education."—*Teachers' World*.

THE EDUCATIONAL THEORY OF PLUTARCH.

By K. M. WESTAWAY, D.Litt.,

Staff Lecturer in Classics, Royal Holloway College, late Marion Kennedy Student, Newnham College.

In analysing Plutarch's educational theory and its underlying philosophy, the author of this book deals with an age during which Greek thought, even apart from Christianity, contained much of value, though it is overlooked by the general historian.

THE EDUCATION OF BEHAVIOUR.

By IDA B. SAXBY, D.Sc.

This is a book on psychology written for teachers and those training as teachers. The special merit of the book is the skill with which it applies recent psychological advances to the needs of the educator. The author is Senior Assistant in the Women's Education Department of University College, Cardiff.

"It is a sound and clear exposition of a difficult subject."—*Manchester Guardian*. With Illustrations.

HODDER & STOUGHTON, LTD

20 WARWICK SQUARE, E.C. 4.

a Borstal institution or an institution for defectives later on. Clearly a great responsibility rests on the magistrates and their probation officers to satisfy themselves that they are able to provide the necessary change for cases they put on probation, but on the other hand the powers of calling up for sentence on any breach of the terms of the order tend to be somewhat overlooked by the upholders of the school system.

Miss Ruth Darwin pleaded for the establishment of hostels for defectives to act as intermediary positions between the institution and the world, so that a defective who appeared to have settled down and become capable of doing something to earn his own living might have his first trial in the world without being exposed to the full range of temptations during his evenings. There is no doubt such hostels would fill a long-needed gap in the provision for defectives, and would do much to prevent the tendency to drift into vice and delinquency which results from a lack of opportunities for suitable recreation and companionship.

In relation to defectives of more tender years another interesting discussion dealt with the respective places and merits of special schools and day occupation centres.

It was pointed out that in the present financial position a large extension of special schools could hardly be looked for, and that to turn the lower grade of child out of school merely to send him to an institution would not be economical. Occupation centres which would not need so highly qualified a staff might fill the gap in certain places. The idea was opposed on the ground there might be a tendency to transfer more and more children, thus depriving them of the benefits of a skilled education. The supporters of this view, however, tend to overlook the law which provides that it is only the imbecile grade who can thus be transferred, and that all educable children must be dealt with by the education authority. There are really two separate concepts of deficiency which by overlapping are leading to confusion of thought. On the one hand are those all round socially inefficient, unable to guard against ordinary physical dangers or to learn to manage themselves or their affairs, or who need care and control for their own protection, these always will need such care, should be at least supervised throughout life, and cannot be taught to live independently, harmoniously, in the community—they are the true mentally defective; on the other hand there are those who, it may be from special disabilities, cannot get on in ordinary school classes but need specialized instruction—these need special schools, but it is unjust that they should be stigmatized for life. Cannot a fresh term other than mentally defective be used for them?

PERSONAL PARAGRAPHS.

THE news of the disappearance of Dr. Sophie Bryant on Tuesday, August 15th, has been received in educational circles with deep regret. Dr. Bryant was staying at the Montauvert Hotel, on the Mer de Glace, which descends from Mont Blanc, and is said to have left there to walk down to Chamonix by the usual easy path, but, at the time of writing, she has not been seen since, though search parties have looked for her. It is feared that she took another route and fell into a crevasse of the glacier, but she may have lost her memory and yet be found somewhere. We cherish this hope, though there is little to give it support.

MR. W. G. RUSHBROOKE has retired from the head mastership of St. Olave's Grammar School, Tower Bridge, after a brilliant career in that position of almost thirty years. Educated at the City of London School, he became a Fellow of St. John's, Cambridge, after graduating First Class in the Classical Tripos, 1872. He then returned to his old school, City of London, as a member of the staff, and remained there until his appointment to St. Olave's in 1893. At the recent Speech Day at St. Olave's, Mr. Asquith paid a well deserved tribute to the excellent work

of Mr. Rushbrooke during his fifty years' labour among London boys. "A great head master must have distinctive and commanding personality, the gift of organization, and the quality of insight into the temperament and capacity of his boys, as boys. It is through the felicitous and exceptionable combination of these gifts and faculties in himself that Mr. Rushbrooke has made the school what he leaves it to-day. The retiring head master would take with him the consciousness of a great task carried on through many years and greatly done." Mr. Rushbrooke has been Dean of the College of Preceptors since 1912 and proposes to continue in office.

MISS BEATRICE M. SPARKS, M.A., Oxon., has been appointed Principal of the Ladies' College, Cheltenham, in succession to Miss Lilian M. Faithfull, M.A. Miss Sparks was educated at the Nottingham High School and St. Hugh's College, Oxford, and took the final honours school in mathematics and physics in 1898. She was on the staff of the Greycoat Hospital, Westminster, until 1905, when she was appointed head mistress of the Wisbech High School for Girls. In 1914 she became head mistress of the Colston's Girls' School, Bristol. Possessed of a strong and attractive personality, Miss Sparks has endeared herself to her pupils and staff by her earnestness of purpose, her thoroughness, and her devotion to work, and her organization at Colston's has earned the admiration of all interested in the school. Miss Sparks has also taken a leading part in educational and professional activities outside school life. As a member of the Executive Committee of the Association of Head Mistresses she has done valuable work as chairman of the Salaries and Pensions Sub-Committee. She has represented the Association on the Executive Committee of the Secondary Schools Association and on the Committees of Bristol University to deal with the First and Second School Certificate. She was a member of the Departmental Committee on Scholarships and Free Places, and is one of the five representatives of the Head Mistresses' Association on the Burnham Committee on Secondary School Teachers' Salaries. Miss Sparks has lately been elected President of the West of England Head Mistresses' Association.

A FAMILIAR figure has been removed from University circles by the death of Sir John Sandys, Public Orator of Cambridge University for over forty-three years. Sir John was educated in India, at Repton, and at St. John's, Cambridge, where he passed through a brilliant career. He was Bell Scholar, Browne's Medallist, Porson Prizeman, and Members' Prizeman. He graduated as Senior Classic in 1867 and in 1870 became tutor of St. John's. He was elected Public Orator in 1876 on the resignation of Jebb and held the office for a longer period than any of his predecessors. During his tenure of office he made nearly seven hundred Latin speeches in honour of eminent persons.

OLD Girls of the St. Albans Girls' High School will deeply regret the sudden death of Mrs. W. A. Bone, formerly head mistress of the school. Educated at the Tottenham High School and the Ladies' College, Cheltenham, Miss Liddiard—as she then was—obtained the B.A. degree of the University of London and became a prominent member of the staff of Ladies' College—her old school. She was appointed head mistress at St. Albans early in 1914, only a few months before the school premises were commandeered by the military authorities. Miss Liddiard carried out her duties with marked success under most trying circumstances, for the work of the school had to be carried on in sections in various premises in the neighbourhood. The school buildings were reopened in 1915 and Miss Liddiard was responsible for the scheme of reorganization which proved so successful. During her tenure of office the Domestic Economy Centre was inaugurated and the dining hall was built. A head mistress of wide interests,

Piccadilly, Manchester.

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W. 1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

PAINTING AND "NATURE" STUDIES.

500 British and Foreign Birds and Small mammals, carefully stuffed by expert taxidermist and mounted on stands for painting studies. Thousands of tropical butterflies mounted in neat glazed cases (glass both sides), giving a fine range in colour and design. Selections on approval. Cases of British butterflies, moths, or beetles, illustrating the most beautiful species, tropical shells, &c. British Lepidoptera, list of 700 species with English names, British Coleoptera, 2,000 species (200,000).

About 300 volumes of books on Natural History. Particulars from

A. FORD, Naturalist, 36 IRVING ROAD, BOURNEMOUTH

ELLIS BROS., 8 GEORGE STREET WEST, LUTON, BEDS.

Specialists in Hats and Caps for Schools
(Girls and Boys)

Send for free illustrated lists of Velour and Felt Hats, Cloth Caps, Hat Bands, Badges, &c.

All Persons interested in Phonetics are recommended to join the INTERNATIONAL PHONETIC ASSOCIATION.

Subscription, 8s. per annum. Entrance fee, 4s.

Members receive free of charge *Le Maître Phonétique*, the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. Jones, University College, London, W.C. 1). New Members receive in return for the Entrance fee: *The Principles of the I.P.A.*, *What is Phonetics?* by H. E. Palmer, and *La Phonétique appliquée à l'Enseignement de la Lecture*, by P. Passy.—List of other publications and prices and back numbers of *Le Maître Phonétique* (from 1889) on application.

Orders for monthly parts of

Telephone—Kensington 6863.

broad sympathies, and generous nature, she possessed to a great degree the faculty of making and retaining friendships. The governing body gave striking testimony to the excellence of the service she had rendered when she resigned in 1916 just before her marriage to Dr. W. A. Bone, Professor of Chemical Technology at the Imperial College of Science, London.

MR. KENNETH FISHER, M.A., Ph.D., Senior Science Master at Eton College, has been appointed to succeed the late Mr. F. W. Sanderson as Head Master of Oundle School.

ONLOOKER.

CORRESPONDENCE.

THE GODOLPHIN SCHOOL, SALISBURY.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—*The Graphic* published on July 15th an article entitled "The Story of the Godolphin School, Salisbury," describing the school's original foundation in the early eighteenth century and its present situation and condition in contrast with its somewhat insignificant state some thirty or forty years ago; but no mention was made of the name of the Head Mistress to whom the new creation of the school was due.

Miss Mary Douglas was appointed Head Mistress in 1889, when the school could boast of little but its interesting antiquity; its quarters and its educational value were both, at the time, comparatively insignificant. Under Miss Douglas, and owing to her inspiring personality, to her remarkable powers of organization and of sympathetic understanding of character, and to her great generosity, the school became what it is to-day, namely, the school which, two years ago, Miss Douglas handed over when she resigned the Headship after a wonderful thirty years' work.

If the article on Charterhouse, which appeared in *The Graphic* the following week, had recalled the removal of that ancient foundation from London to Godalming without mentioning Dr. Haig Brown, the omission would yet have been less remarkable than a "Story of the Godolphin School" which omitted to speak of Miss Mary Douglas, the school's second founder, and its great Head Mistress.—I am, Sirs, Yours faithfully,

ELEANOR T. WEBB.

(Head Mistress, 1903–1905, of the Leeds Girls' High School).

EXPERIMENTAL INVESTIGATION IN EDUCATION.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—About a year ago I applied to a form of girls a test very similar to one of which Prof. Valentine speaks in his article in *The Journal of Education* for July. The form had a lesson on the Sonnet, and the children were afterwards given three-quarters of an hour to write a sonnet themselves. Most of the attempts were poor, but I submit one of the two best sonnets written, for criticism:

I often saw the moon with shining face
Upstep the clouds and shadow the pale stars,
And move to west, ne'er staying in one place,
While near her horn stood clear the red-faced Mars.
Sometimes a cloud passed o'er her visage bright,
But soon outsailed she lightly from its folds,
Flooding the world below with heavenly light,
Which light the weary traveller soon consoles.
So shines she clear above the silent trees,
Making fantastic shadows on the ground,
And gently move the branches in the breeze
While sleeps the weary world without a sound.
So next when thou the shining moon dost see
So may'st thou then, dear friend, remember me.

With all its childishness this sonnet seems to me wonderfully clever for a girl aged 13 years 8 months.—Yours, &c.,

P. A. PALMER.

Hillcourt, Glenageary, Co. Dublin.

FROM Mr. HERBERT RUSSELL'S LIST OF BOOKS.

NOW READY.

PAULATIM:

A Translation and Composition Book based on the Syntax of the Latin Complex Sentence.

By PERCY H. REANEY, M.A., Classical Master, Sir George Monoux Grammar School, Walthamstow. Crown 8vo. Cloth. 256 pages. Price 4s.

This book is designed to ease the transition from the primer to the Latin author. It anticipates and embodies in a remarkable way the recommendations and findings of the recently appointed Committee on Classics.

Its chief characteristics are: (1) Translation and composition are treated side by side. (2) Rules are deduced from numerous examples. (3) The Latin passages are carefully selected from Latin authors to illustrate the construction dealt with, and continuous passages, complete in themselves, are chosen whenever possible. (4) Most of the exercises for translation into Latin are continuous passages. (5) More attention than is usual at this stage is devoted to the Latin period and Oratio Obliqua.

"Paulatim" serves the purpose of two books—a Reader and a Prose Composition; it may also be used for Unseens. Its use will be a distinct economy.

Copies on approval, or pro-pectus post free.

The Old Order and the New. (Book III of "The

Ancient Civilisations" Series), being the story of the Roman Empire and the Beginnings of Modern Europe. By EMILY M. BURKE, L.L.A., Hornsey County School. Crown 8vo. Cloth. 184 pp. with 7 maps. Price 3s.

Full Prospectus on application.

"This well printed book continues a series of which the previous volume deals with Ancient Greece and Republican Rome. The book is intended for pupils in the middle and senior forms of secondary and central schools, and is offered as of great interest to students in continuation schools. It is an excellent survey. . . ."—*The Times Educational Supplement*.

With "The Shining East" (2s. 3d.) and "The Violet Crown and the Seven Hills" (3s.) it completes one group of a series, yet it is at the same time complete in itself.

A Digest of British History. By S. H. McGRADY, M.A. (Cantab.), Senior History Master, Bromley County School for Boys. With an Introduction by Oscar Browning. Crown 8vo. Cloth. 382 pages.

The new and enlarged edition of the **Complete Volume** brings the work up to date (1922). Price 4s. 6d.

Also published in three parts, as under: Part I, B.C. to 1485. Part II, 1485 to 1789. Part III, 1789 to 1912. Price 1s. 4d.

This Note Book aims at a scientific treatment of British History. The days when lessons consisted of lists of dates and battles, and the lives of favourites are nearly over. To teach the pupil to dig beneath the facts, to reason out for himself causes and results, to see that there are two sides to every question, to realize the eternal march of progress—this is the spirit of History.

"A Digest of British History" is a Note Book, but not a mere cram book. Facts are included, not for the sake of filling page after page, but only where they have a logical connection with Historical movement and developments. It is so arranged that it can be used equally well either for University, Scholarship, and Matriculation purposes, or for the Oxford and Cambridge Locals, Senior or Junior.

Complete Catalogue post free on application to

'THE PLAY'S THE THING'

THE COMPANION SHAKESPEARE

Edited by J. A. GREEN, M.A.

Late Professor of Education, University of Sheffield.

THIS edition is on entirely new lines, which give effect to all the recommendations of the Board of Education's Report on the Teaching of English. By a simple, but novel, arrangement the student is stimulated to think over the Play as he reads it, and to grasp its outstanding points, while the drama "reads like a story." In this way the quick reading of the plays is secured without the sacrifice of intelligent appreciation. There are full Acting Notes.

*Every Teacher should read the Handbook to the Dalton Plan
by its Founder*

Just Out. Crown 8vo. With Portrait. 5s. net.

EDUCATION ON THE DALTON PLAN

By HELEN PARKHURST

With an Introduction by Prof. T. P. Nunn, D.Sc., and contributions by Rosa Bassett, M.B.E., B.A., and John Eades.

THIS new book contains a full exposition of the Dalton Plan by its founder. Miss Parkhurst, says Dr. Nunn in his *Introduction*, "has envisaged a definite problem of great practical importance—namely, how to secure from the vast volume of educational effort expended in schools a richer harvest of individual culture and efficiency. The 'Dalton Plan' is her solution . . . [it] offers a path of progress which may safely be taken by all who have the gifts of intelligence, devotion, and enterprise." The book also contains chapters on the working of the Plan in British Secondary and Elementary schools, together with sample assignments adapted to their respective needs.

"Its publication is a notable event. . . . The Plan is explained very lucidly."—*Teachers' World*.

DALTON PLAN ASSIGNMENTS

BLACKIE'S SELECT LIST

In these days of economy experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction and Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. 3d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater Plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known "Junior School Shakespeare," which omits everything that might be thought undesirable in class reading. Price 6d. each.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.,

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and aesthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

THE WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. 6d. each.

THE GROUNDWORK OF BRITISH HISTORY.

New Edition, brought down to 1921.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College With Maps, Time Charts, and Full Index. 764 pp., super crown 8vo, 8s. net. Complete in One Volume.

In Two Parts, 5s. each net. Part I, B.C. 55-1603; Part II, 1603-1921.

In Three Sections, 3s. 9d. each net: Section I, B.C. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1921.

N.B.—FOR THE CONVENIENCE OF THOSE USING EARLIER EDITIONS OF "THE GROUNDWORK," A SUPPLEMENT HAS JUST BEEN ISSUED BRINGING THE BOOK DOWN TO DATE, PRICE 1s. 6d. NET.

THE GROUNDWORK OF THE WAR.

By C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College. 1s. 6d. net.

Prepared specially for a concluding section of "The Groundwork of British History." It brings that work down to 1921.

SCIENCE.

APPLIED CALCULUS. By F. F. P. BISACRE, O.B.E., M.A., B.Sc., A.M.Inst.C.E. Large crown 8vo. xvi + 446 pp., with Answers, including 106 figures, and 17 half-tone portraits of celebrated mathematicians and physicists. Price 10s. 6d. net.

This book has been specially written for science and engineering students who desire to acquire a working knowledge of the calculus but whose preliminary mathematical equipment is slight.

PLANE GEOMETRY. An Account of the more Elementary Properties of the Conic Sections, treated by the Methods of Co-ordinate Geometry, and of Modern Projective Geometry, with Applications to Practical Drawing. By L. B. BENNY, M.A. (Cantab.), B.A. (Lond.), F.R.A.S., sometime Mathematical Scholar of Christ College, Cambridge; Head of the Mathematical Department of University College, Exeter. Large crown 8vo. viii + 336 pp., with Answers, 145 figures, and 5 half-tone portraits of celebrated mathematicians. Price 10s. 6d. net.

This book covers completely the course in Geometry for the B.Sc. Pass Examination of London University in Pure Mathematics.

APPLIED GEOGRAPHY. By ALEXANDER STEVENS, M.A., B.Sc., Lecturer in Geography, Glasgow University. Crown 8vo. Price 6s. net.

For those who propose to enter the professions of the sea, surveying, engineering, prospecting, &c.

METEOROLOGY: An Introductory Treatise. By A. E. M. GEDDES, O.B.E., M.A., D.Sc., Lecturer in Natural Philosophy in the University of Aberdeen. Large demy 8vo. xx + 390 pp., with 4 coloured plates, 16 half-tones, 103 figures, 11 charts, and 29 tables. Price 21s. net.

A SHORT SYSTEM OF QUALITATIVE ANALYSIS. For Students of Inorganic Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C. Price 2s. 6d. net.

THE FOUNDATIONS OF CHEMICAL THEORY; The Elements of Physical and General Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Professor of Inorganic and Analytical Chemistry in the Royal Technical College, Glasgow. Large demy 8vo.

viii + 266 pp., with 46 figures. Price 12s. 6d. net.

"Professor Caven's clear exposition of Modern Chemical Theory, though mainly intended for use as a text-book, will interest laymen who have not followed the developments of chemistry with close attention. Unlike the ordinary treatise, the book seeks to emphasize general principles rather than to record a mass of facts."—*Spectator*.

A TEXT-BOOK OF ORGANIC CHEMISTRY.

By A. BERNTHSEN, Ph.D. New Edition, revised to date by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C., Professor of Organic Chemistry in the Indian Institute of Science, Bangalore. Large crown 8vo. Price 12s. 6d. net.

SYSTEMATIC INORGANIC CHEMISTRY

from the Standpoint of the Periodic Law. A Text-book for Advanced Students. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Principal of the Technical College, Darlington; and G. D. LANDER, D.Sc. (St. Andrews and London), Professor of Chemistry, Royal Veterinary College, London. Price 7s. 6d. net.

SCIENTIFIC METHOD: Its Philosophy and its

Practice. By F. W. WESTAWAY. New Edition. Large Crown 8vo. xxiv + 426 pp., with 24 figures. Demy 8vo. Price 10s. 6d. net.

"Mr. Westaway has a singularly acute and active mind which has engaged itself with almost all branches of human study; and he has the rarest of all gifts among English speaking philosophers, that of directness and lucidity of style."—*Times*.

SOLID GEOMETRY. By J. W. HENSON, B.A., Head Master, High School for Boys, Trowbridge. Cota. Price 3s. net.

This book provides a course in Solid Geometry suitable for classes taking Higher Geometry in the Oxford and Cambridge Senior Local Examinations and the Intermediate B.Sc. Examinations of London University.

Prospectuses giving full particulars of above publications post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C. 4.
AND AT GLASGOW AND BOMBAY.

SUITABLE BOOKS FOR APPLIED SCIENCES

PUBLISHED AT THE
University Tutorial Press.

Engineering Science, A First Course in. (Includes the Elements of Applied Mechanics and Heat.) By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. *Second Edition.* 4s.

The book is intended for students who are taking a Preliminary Technical Course. It deals mainly with Applied Mechanics and Heat treated from an experimental and practical point of view. The use of expensive apparatus has been avoided.

While the first principles are fully explained and the scientific side of the subject treated as thoroughly as the object of the course would justify, the bearing of the work on Engineering Science has always been kept in view. This is of the greatest importance, for the reason that the engineering student readily takes a keen interest in anything which is obviously connected with his daily work.

"Well arranged and thoroughly sound in scope and treatment. The apparatus required is so simple that all the experiments should be capable of being performed in any school."—*Electricity*.

Engineering Science, A Second Course in. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. 5s.

This book embodies a course of study which is intended to follow that laid down in the Author's *First Course in Engineering Science*. The book covers the syllabus for various professional examinations such as the Mechanics of the Studentship Examination of the Institution of Mechanical Engineers and the graduate examination of the Institution of Automobile Engineers.

Geometry (First Stage), Practical, Plane, and Solid. By G. F. BURN, A.M.I.Mech.E., late Head of the Mechanical Engineering Dept., at the Leeds Technical School. *Third Edition.* 4s.

A good introductory course in practical geometry. "Eminently clear and lucid. The idea of utilizing photography for the more difficult conceptions is most helpful."—*Guardian*.

"Written both with knowledge of the subject and with appreciation of the difficulties of beginners. The sections on Solid Geometry are very good, and the diagrams are numerous and clear."—*School World*.

Heat Engines, First Stage. By J. W. HAYWARD, M.Sc., A.M.I.Mech.E. 4s.

In the first part of this book a particular engine and boiler are described in detail, and the theory of their action explained. Then follow an account of steam engines in general and three chapters on gas and oil engines.

The object of the book is to give a good general knowledge with a clear account of the first principles.

"We can, after having thoroughly tested it, cordially recommend its use by all beginners in this subject."—*Engineering Review*.

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc., D.P.H., Medical Officer of Health for Hampshire and Chief Medical Officer to the County Education Committee. *Sixth Edition, Revised and Enlarged.* 4s.

A useful course for beginners in this subject, containing a short account of the elements in Human Physiology.

"The author's plan of taking into consideration the various parts of physiology as essential introductions to certain sections of hygiene has succeeded. In addition he has preserved a logical sequence of both physiological and hygienic facts, which develops the subject in the most intelligible way."—*Lancet*.

Hygiene, Second Stage. By A. E. IKIN, B.Sc., LL.D., and R. A. LYSTER, M.D., B.Ch., B.Sc., D.P.H. *Third Edition.* 5s.

An advanced course suitable for senior classes. The arrangement of the subject is similar to that of *First Stage Hygiene*, and, as far as possible, the different parts of the subject are taken in the same order. The list of experiments that are added at the end of many of the chapters represent only the minimum amount of this kind of work, though they will doubtless suggest further possibilities in this direction. All the experiments described can be very easily carried out by the average student.

"The matter is systematically arranged, and the student is further aided in understanding the more technical parts of the text by numerous excellent diagrams."—*Lancet*.

Electricity, Technical. By Prof. H. T. DAVIDGE, B.Sc., M.I.E.E., late Professor of Engineering at the Ordnance College, Woolwich, and R. W. HUTCHINSON, M.Sc., A.M.I.E.E., Principal of the Municipal Technical School, Smethwick. *Fourth Edition.* 10s. 6d.

This standard text-book has been so altered as to convert it into virtually a new work. The book has been entirely reset, the employment of a larger page enabling many improvements to be made in the subject matter, diagrams, type, &c. A large quantity of new matter has been incorporated, and the work is now thoroughly up to date for modern requirements.

Electrical Engineering, Continuous Current. By W. T. MACCALL, M.Sc., A.M.I.E.E., Head of the Department of Electrical Engineering in the Technical College, Sunderland. *Second Edition.* 15s.

The book is intended to supply all that is required in the ordinary three years' day course in Technical Colleges, and all that is usually done in evening classes. It is very suitable for use in Advanced Group Courses under the Board of Education regulations. It fully covers the Continuous Current section of the Grade II examination in Electrical Engineering of the City and Guilds of London Institute.

"The sequence of the instruction is well arranged, and the descriptions of appliances are clearly put. The chapters on Lighting and Illumination and on Second Batteries are exceptionally good, and descriptions of tests concise and to the point."—*Journal of the Society of Engineers*.

"As regards the work actually covered, nothing but praise can be given. The explanations are thoroughly sound. The illustrations are numerous and well drawn. All teachers of electrical engineering classes should certainly take an early opportunity of inspecting this book."—*Technical Journal*.

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

No. IX.

SCIENCE.

By C. L. BRYANT.

"SUPPLEMENTARY Aids to Classroom Work":
What, with regard to science teaching, is meant by this? It may indicate optical lanterns, devices for projecting ripples from a water surface on to a screen, the cinematograph, and so on; in short, all the tricks of the demonstrator's trade. Such things are to be found described in dealers' catalogues; and no one will deny that they have made the classroom a less intolerable place than it used to be. A more profitable interpretation is to consider that the title refers to all those outside activities, natural history societies, workshops, museums, and the like, which give meaning and life to the work of the classroom. It is not difficult to discover how these things may be run. What is difficult is to realize their paramount importance; and, having grasped it, to supply oneself the vital energy which is necessary for their success.

How temptingly easy it is to 'deliver a lecture' on, shall we say, the properties of oxygen; and, in general, how useless. The writer has been doing it for some twenty years; and, even with the consciousness of failure, he may continue the crime for a like time to come; partly from indolence, partly from necessity. Some boys do learn something from such formal teaching, though it may be doubted if the knowledge they gain is of much profit to them. Most of them "come out by that same door wherein they went." There is an old story of a boy, who, after attending some lessons on the prophets, was faced in an examination with the question, "What do

you know about Elijah?" His instructive reply was, "Little is known of this holy man, but he went for a long cruise with a widow." There is no need to point the moral of that; I could illustrate it further by a dozen as clear, if less pithy examples of vagueness within my own experience. The plain fact is that boys and girls are dulled when they are made the passive recipients of information; especially so when the information does not bear on their immediate interests.

Mr. E. R. Thomas, now headmaster of the Royal Grammar School, Newcastle-on-Tyne, once said when speaking in this connexion, "All we can do is to give the boys the opportunity to learn: the wise teacher knows that he can do no more." It is a commonplace saying that before a boy learns his interest must be aroused. But in matters concerned with natural science, the interest, in ninety-nine cases out of a hundred, is already there. All that is necessary is to avoid killing it. But what do we do? If we teach heat, we begin by wasting precious hours in making thermometers, in the pleasing fancy that we are being logical by so doing. There is no futility in a school-master like this striving after logical sequence. If hydrostatics is the subject with which we are to delight the eager beginners, we are not content to let them weigh bricks hung from spring balances into pails of water. For some reason or other, that is not science. They must have chemical balances, minute weights, and a list of don'ts beside which the decalogue is a paltry affair. There is no need to multiply instances. Almost any examination syllabus will serve to show the lines along which interest may most easily be destroyed.

I once beguiled a tedious journey with a boy by a series of competitions, of which one—at the boy's suggestion, obviously—was of the question and answer sort. We were to ask questions alternately, and to score pennies for correct answers. The questioner's own knowledge of the answer might be challenged on the deposit of a penny; and if found wanting, he was to be down by that amount. The game, started by the boy, ran like this:—

'How could a rabbit dig a hole without leaving a little pile of earth on top?'

"I don't know, and I'll challenge you for the answer."

"Well, he'd begin from the bottom and dig upwards."

"But how would he get down there to start with?"

"Ah! you don't know the answer to that yourself; so now you owe me threepence."

The natural thing is for boys first to accept the world as they see it. They are willing, even anxious, to probe beneath the surface. We persist in forcing them down below, and in expecting them to work their way upwards through unfamiliar ground, forgetful ourselves of the fact that the real mysteries lie hidden down there. They want to start with a steam-engine: we give them a thermometer, after explaining its construction, of course. They long for an explosion: we expect them to be thrilled in estimating the percentage of salt in a mixture with sand, especially made for the purpose. A boy's natural inclination is to read the history of science backwards, and to extend the boundaries of his knowledge outwards from himself and his immediate circumstances. We try to start him off at some remote point in time and to urge him back to the present. Is it surprising that we are so often disappointed at the slowness of his progress?

Whenever one drives youngsters with a loose rein, the rate at which they travel is astonishing. A short time ago I had, at a moment's notice, to take a small class in wireless telegraphy. None of the boys had learnt any formal science. Some of them had a rudimentary knowledge of electricity. Some knew next to nothing about it. The subject was chosen chiefly because one or two of them were keen about it, and one was the proud possessor of a "set." Fortunately, as it turned out, I myself was profoundly ignorant about "wireless." That difficulty I got over at our first meeting by asking the most enthusiastic of the boys if he could give a preliminary talk.

He proceeded to lecture very well indeed on the history of the subject for a whole hour without any preparation at all. Thereupon, I made a bargain that, if he would do the talking, I would provide every opportunity for their experimental work. When lecturing was necessary, I was content to be a listener; and very good were the lectures. Once, indeed, I did make a protest that my second in command was going too fast; too fast for me, at any rate. But he replied that boys could learn more quickly than I thought; and I let them go at their own pace, which was faster than I should have believed possible. My own part was to make them free of a good workshop, to supply them with physical apparatus, to advise them as to books, to take them to see installations, and to introduce them to experts; and most uncommonly busy it kept me. They learnt at an amazing rate, from one another, from books, from experts, and by trial and error in the matter of experimenting. By the end of the term they had made four sets of receiving apparatus, varying in complexity from a crystal detector to a three valve amplifying set; and all of them had at least a fair working knowledge of the subject.

In the above, as in other similar instances which it may recall to the minds of my readers, the secrets of the success were interest and freedom. Sir J. J. Thomson was once reported to have said—and he has given me leave to quote him for the purpose of this article—that every great experimenter he knew had learnt his skill from his hobbies rather than from courses in schools; and, when challenged, to have said that it was most emphatically true of himself. For reasons of economy and organization, the classroom occupies, and perhaps must always occupy, a prominent position in school life. But if it is conceded that the boys' natural interests should be exploited, the problem of this article becomes reversed. We have not so much to find subsidiary aids to classroom work as to find how the latter may be made an important subsidiary to outside activities. Mr. F. W. Sanderson's method at Oundle, where the problems of the field, of the workshop and of the laboratory are brought into the mathematical classrooms to be threshed out, well deserves the attention which has been focussed upon it. So too does the prominent position given to engineering; though Mr. Sanderson himself regretted the misinterpretation expressed in the phrase one sometimes hears that Oundle is an engineering school. His belief was that engineering provides a natural avenue of approach to pure as well as to applied science.

Even if there is no direct connexion with the classroom, much can be done to arouse or to sustain interest by means of scientific societies, especially if the active work is done by the boys themselves. One hears it said that the transactions of these bodies savour of popular science; that they are not the real thing in education. Yet it is a remarkable fact that academic successes are frequent where these organizations are fostered. One need only mention three prominent schools, in which flourishing scientific societies date from about half a century ago. I mean Rugby School, Marlborough College, whose society publishes excellent records of its doings; and Harrow School, where the five hundredth meeting of the scientific society was held a few months ago.

The kind of work these school clubs can do is very varied. The keeping of the details of the flora and fauna of the locality should be a matter of routine; so, too, should be the records of the weather—if this is done in connexion with the Meteorological Office, so much the better. The geology of the district may be explored, surveys made, conversaziones held—copies, in miniature, of the Royal Society evenings, which are valued so highly by those who are privileged to attend. It is impossible to give an exact prescription, for so much depends upon local circumstances. Geology can scarcely be attempted in a pure clay formation, nor can much in the way of field botany be done by boys situated in a populous town. The latter, however, may be ideally placed for visits to

factories of one sort and another; and the managers are usually most accommodating in the matter of granting facilities. Of all the chemistry I learned at school, the thing which stands out most vividly in my mind is a visit paid to the local gas works. Take a boy to such a place for a couple of hours, and ammonia becomes something more real than a formula, and water-gas than a chemical equation. Enough interest will be aroused to enliven half a dozen lectures, provided they are given after and not before the visit!

Better still is it to allow the boys to undertake some real research. More than one would think comes within their scope. As an example, one may mention the work which some schools represented on the Science Masters' Association have been doing in connexion with the Rothamsted Experimental Station. The latter body asked questions of the schools as to the dimensions and arrangement of soil particles; the moisture, temperature and atmosphere of the soil; the distribution of weeds, and the habits and associations of individual species. The replies were found to be of real use to those who are compiling agricultural records; on the other hand, it gave to the boys concerned an idea of the spirit of discovery with which no amount of simple telling can compare.

Of other interests, museums are apt to be a snare. They become as dead as the fossils they contain. The curator should be a stony-hearted individual who is capable of refusing any contribution, however costly, which has no bearing on the interests of the boys of the school. The collection should have a direct local significance, and the building should be accessible. In these respects the excellent museum at Charterhouse is almost ideal. When an exhibit has served its purpose and is becoming out-of-date, it should be scrapped. The new public school at Bembridge proposes to go still further and to disperse its whole collection from time to time, a drastic proceeding, but one which is justifiable.

Astronomy is a more difficult subject to accommodate, chiefly on account of the night work necessary in making observations. Where possible, provision should be made for it, if only to supply the legitimate demands of those few boys who are already captivated by the heavens. The successors of the great astronomers will come from among these. The British Astronomical Association is awake to the importance of fostering this study, and regularly gives assistance to certain affiliated schools.

School workshops supply a more common demand. The Prime Minister's Committee on Science in Education, over which Sir J. J. Thomson presided, came to the conclusion that engineering was not a desirable subject in the regular curricula of secondary schools, on the ground, presumably, that it savours too much of vocational instruction. That may be so, and would be so, if the chief aim were to turn out skilled mechanics. But it is to be doubted if the Committee gave sufficient consideration to the fact that many boys have a desire to learn along these lines, and that to thwart it does not make their energies available in other directions. For boys above the age of fifteen or so, engineering is a bad school subject, if by that expression it is meant that it is obligatory on all boys to study it. But facilities should be provided for those who do wish to. For all boys below that age, speaking generally, handwork of some sort is highly desirable. One of the chief faults of our educational system is that at an age when boys are longing to *do* something with their hands and bodies we deny them the opportunity, inflict them with sedentary occupations, and make them concentrate on books. The result, too often, is that they come to hate all learning.

One of my duties is to supervise the workshops at Harrow School. To a small extent, the work of the place is connected with the ordinary school-time studies. But in the main, attendance is purely voluntary, and the workshop is in the position of a school society. Boys come there in their spare time, and pay for the privilege.

Instructors, workmen, and apprentices are present to assist them in their hobbies. Members are allowed to make anything, within reason, that they like; the only real restrictions being on the grounds of cost or of exceptional difficulty, which might make the job outlast a beginner's patience. The things that are made cover a wide range; from a stud box to a sailing boat; from a candle-stick to a petrol engine; from an electro-magnet to a dynamo. More than a hundred boys use the shop in this way. It is not uncommon to find as many as fifty of them there at once, busily employed on work which makes its own appeal, and which, besides training hand and eye, usually demands some drawing and some calculation as well as the exercise of common sense. The concentration with which they work in the absence of formal discipline and training is really remarkable.

To pass from the practical to the artistic, an interesting experiment of Mr. E. R. Thomas's at Rugby may be mentioned. Having charge of some clever boys of a literary turn of mind, he set them to study the life of Pasteur, when it occurred to him to get them to produce some of the scenes of Sacha Guitry's play of that name. Will not the great experimenter live for ever in the memories of those boys? Another group of the same form of boys, being interested in Leonardo da Vinci, and not to be outdone by their fellows, set out to write for themselves a play centring around the person of the painter-scientist. But is this learning science? Of course it is. What we have to rid ourselves of is the feeling that the only real science for beginners is of the sort prescribed in the majority of first school examination schedules. It is a matter for profound thankfulness that the Oxford and Cambridge Joint Examining Board have been pioneers in introducing papers on General Science for their School Certificate Examinations, giving thereby a considerable degree of freedom to the teacher who wishes to base his instruction on the natural interests of his pupils.

A striking example of the way in which outside activities can be connected with the classroom was described by Mr. E. Price Evans in the *School Science Review* of June, 1920. Making local ecology the basis of his teaching of botany at Boteler Grammar School, he takes his classes at intervals to Ryhope Dene, and there they observe the various plant associations in connexion with the geological features which give rise to them. Analyses of the soil, mechanical, chemical, and bacteriological, are carried out; seasonal changes in the vegetation are forecasted and observed; and, in general, the study of botany, depending on field work, is linked up from the start with the kindred sciences from which it is too commonly divorced.

The foregoing instances are given as examples of what can be done. It is idle to deny that work of this kind makes a big demand on the teacher. His time is limited; his energies fully employed. What chance is there for a new enterprise? There are restrictions imposed by school organization. Curricula must be moulded to fit examinations. Formidable obstacles oppose any who would leave the beaten track. Yet they are difficulties which every endeavour should be made to surmount, if the teaching of our children, so far as science is concerned, is to be freed from the bookishness which is its worst characteristic at present.

EDUCATIONAL ECONOMIES IN WILTSHIRE.—We learn that the Board of Education has communicated with the Wiltshire Education Committee with regard to proposed economies. The Board is of opinion that "the staff allowed in the area at present is, though sufficient, by no means excessive, and although some economies may be found practicable, it is not clear that upon the lines suggested the Authority will be able to maintain the schools in efficiency." It is also stated that inefficiency as a result of reduction in the quality or number of a school staff will be regarded as a serious matter.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

The Commissions to be appointed under Mr. Fisher's Bill are :

**Oxford and
Cambridge
Commissions.**

For Oxford: Lord Chelmsford, the Bishop of Ripon (Dr. Strong), Mr. Peel, M.P., Sir Archibald Garrod, Dr. Hogarth, Dr. Pembler, and Mr. P. E. Matheson; and for Cambridge: Lord Crewe, Bishop Ryle (Dean of Westminster), Sir T. L. Heath, Sir Richard Glazebrook, Sir H. F. Wilson, Sir H. Kerr Anderson, and Dr. Peter Giles. The Commissioners are given till the end of next year for preliminary investigations and are expected to complete their work of drafting new statutes by the end of 1924.

Another red herring! This time a site in Westminster with

**London
University
Site.**

a river frontage above the House of Parliament is suggested, one of the most desolate quarters of London. The cost is to be £2,000,000. Facing the University building across the river would be King's College, to be built on the site of Doulton's works; and a bridge would be thrown across the river. "The scenic effect of such a project," we are told, "can readily be imagined." Another suggestion which is under discussion is the purchase of land on the riverside at Mortlake for playing fields. The provision of adequate playing fields would be a great asset, not only for the University but for the promotion of sport and the enjoyment of the citizens of London generally. It is a question which ought to receive early attention.

The question of the standard of London Matriculation and

**London
Matriculation.**

the marking of the papers is being vigorously discussed in the newspapers. It is something more than a silly season topic, for strong feeling has evidently been aroused. The percentage of failures, nearly two in three, is certainly very high for an examination of this type and one can well believe that a good many useful careers are nipped in the bud through failure to overcome the hydra-headed difficulties. The complaint relates rather to the marking than the style or standard of the examination papers. Would it not be well for the whole question to be fully investigated in free consultation with bodies of teachers? Compared with an earlier generation, when Latin and Greek were both compulsory, the options to-day appear to be fairly generous, but there can be no doubt that the London Matriculation is a difficult examination for the modern boy or girl of sixteen or seventeen to tackle. One suggestion which might be worth considering is for a general paper. It frequently happens that a candidate is uncertain as to the choice of his fifth subject, having two or even three subjects which he might attempt. This element of chance might be reduced by a general paper which would throw a sidelight on the general intelligence of the candidate and afford useful information in the case of doubtful candidates.

SCOTLAND.

In spite of strenuous opposition from a small group of Scottish

**The Super-
annuation Act.**

M.P.s the Education (Scotland) (Superannuation) Act is now on the Statute Book in much the same form as the corresponding English Act. Mr. D. M. Cowan, Member for the Scottish Universities and Parliamentary Secretary of the Educational Institute, put forward the teachers' case most admirably; and if first-hand knowledge and cogent argument could have carried the day, Mr. Cowan's efforts in Committee would have had a happier outcome than they actually achieved. He argued that the position of the Scottish teachers was different from that of their English brethren, and he tried to have the five per cent charge for superannuation split into three per cent on the teacher and two on the employing authority. Failing that, he moved that the appointed day for bringing the scheme into operation should be July 1st instead of June 1st. Mr. Munro, while paying a very high compliment to Mr. Cowan's grasp of the problems of superannuation, followed in Mr. Fisher's footsteps, and successfully resisted any serious changes in his Bill. So far as the Act itself is concerned, the most hopeful feature is in the provision that "it shall be lawful" for the authorities to deduct five per cent from teachers' salaries. That leaves open the possibility of an arrangement between authorities and teachers for what would be virtually a reversion to the old practice of joint contribution to superannuation. Apart from that, Scottish teachers may take such encouragement as they can from Mr. Munro's promise that an attempt would be made

to remedy the existing injustices. If, as some think, this foreshadows the concession of the grant of superannuation to teachers who have given thirty years' service, as in England, there would be deep satisfaction in Scotland. Mr. Cowan certainly made out an effective case for this. Mr. Munro admitted that the grievance was a real one—as indeed he could scarcely help doing after making so much use of the English precedent for his own purposes. But it remains to be seen whether the scheme which is expected to be laid on the table of the House of Commons in November will give practical effect to his sympathy.

Frequently in the course of the debates Scottish Members

**"Dragged at
the Heels of
England."**

have protested against Scotland being "dragged at the heels of England" in educational matters. Mr. Hogge even said—and probably with truth—that if this superannuation measure had been left to be decided by Scottish Members it would never have passed. It is perhaps not such a bad thing as some Scotsmen are apt to imagine that Scottish and English education should approximate more closely on the administrative side. Both countries have something to gain from the approximation. Scotland, for example, might very well develop a less rigid system of secondary education by a judicious imitation of the freer and more varied system that flourishes south of the border. At the same time, it must be said that in the matter of superannuation there is cause for protest. In the first place salaries are stabilized in England till 1925, while in Scotland reductions of varying amounts, probably averaging five per cent, are being made simultaneously with the superannuation change. In the second place, as the teacher members in the Joint Council argued when the Burnham Scale was established in England as a reason for an increase of Scottish salaries, certificated teachers in Scotland—and all teachers are certificated in England. Now that the Bill is passed, however, these considerations cease to matter much for the time being. But they will matter before very long when the shortage of teachers which the present "economics" are making inevitable comes.

In electing Dr. R. R. Rusk lecturer on Education, St. Andrews

**The Education
Chair in
St. Andrews.**

University has made an excellent appointment and has stultified itself. Both by his contributions to educational science and the special capacity as a teacher he has shown in the service of the Dundee Training College, Dr. Rusk has proved himself worthy of any university post in Education in the country. Judged by the standard set by the occupants of the Bell chairs of Education in St. Andrews and Edinburgh since their establishment in 1876, he would make a worthy professor of Education in St. Andrews. Why, then, has he not been appointed professor? The obvious answer seems to be that he has been given the inferior status, though deserving the superior, in order that £300 a year may be saved. The point of view is mean. On the face of it there seems to be an economy effected, but like most of the economies that are being made in education at the present time it is an expensive economy. St. Andrews University gets Dr. Rusk's services at a cheaper rate because it shares his time and energies with the local Provincial Committee. St. Andrews and all the other Universities have just to follow up this line of economy and they can cut down their staffs a half. Incidentally they will cut down research and literary work a good deal more than half. Even if St. Andrews is willing to take the retrograde course of reducing the chance of pedagogical advance to save £300, Scotland cannot afford the economy. The output of original work on educational science in Scotland at present is pitifully small, and will continue to be so till the teachers see that education gets fuller justice done to it in all the Universities.

There was talk a year or two ago of a sum being raised by

**Research in
Spelling.**

the teachers for the endowment of Education chairs in Aberdeen and Glasgow. But the tide was missed, and now that salaries are coming down not much can be expected from such a scheme for some time to come. Nevertheless, the work of the Institute's Committee on Educational Research continued, in spite of all distractions, gives evidence of a steady interest in the scientific aspects of school practice, which must sooner or later convince the Universities that education deserves and requires more serious consideration than they have so far given it. The subject which seems to be getting special attention from the Research Committee this year is spelling. Some time ago the Committee made tentative suggestions for spelling

reform. Now it is busy compiling and grading word lists for use in the primary schools. The ideal, it is stated, is to make up a list of all the common words in the English language, and especially those presenting difficulties in spelling, so that teachers may escape from the hopelessly wide task of teaching children to spell each and every word which may possibly occur in ordinary reading. First of all a list of words often misspelt by pupils of twelve, showing the average percentage of error in Scottish qualifying classes, was prepared. Then followed a list, drawn up and arranged on similar investigations, of words found difficult by the ordinary boy or girl of ten. These two lists between them contained 1,250 words. Then last of all there has been published in a recent number of *The Educational Journal* a list of "1,100 common words which should be spelt correctly by children of ten" for use in infant and junior classes. This final list has been arranged in order of difficulty by means of a collective vote of infants' and junior teachers, and presents all the simple common words in groupings, which should make easier the learning of spelling in the lower classes of the school. Primary teachers will look forward with interest to the appearance of the revised version of the lists in text-book form for school use. If even part of the promises of the Research Committee regarding a lightening of the burden of spelling are justified in practice the Committee will deserve the gratitude of the profession.

The Education Department, in issuing the Regulations for the Training of Teachers, intimates that a more comprehensive recasting of the Regulations is contemplated in the near future. It is generally believed that this has special reference to considerable changes to be made in the curriculum of the Training Colleges. During the past winter the Executive Committee of the central Provincial Committee, acting in informal conjunction with the Educational Institute, has been making inquiries in various quarters regarding the effect of the studies of the colleges on school work, and has very wisely attached special importance to the opinion of young teachers trained under the Provincial Committee régime. These people were asked to state which subjects in their judgment had proved of greatest service, and which of least service when they had come to teach. No report of the conclusions reached from this collation of opinions has reached the public, but it is known that the subjects which found least favour were theoretical subjects like Logic and Ethics and subjects like Phonetics, the practical bearings of which had not been evident to the students. On first thoughts this may appear a regrettable conclusion. Logic and Ethics may not have much to commend them from a utilitarian point of view, but educational theory undoubtedly requires them for a groundwork of sound thinking just as educational practice requires analytical sciences like phonetics. But the special conditions of the Training Colleges must be kept in mind. As things are, it is impossible to get a sound academic training for teaching in a two years' course, in which personal culture and professional preparation have to be combined. Students who have to study simultaneously a dozen different subjects can only get smatterings of logic and ethics, and smatterings are of no use. The proper cure for the much overloaded curriculum of the Colleges would be an extension of the period of training. But it is too much to hope for that from the Education Department in its present mood. Two years ago, when there was a prospect of an early extension of the school age to fifteen, it might have instituted a three years' course for some, if not for all, teachers. Now the best to be hoped for is a pruning of the present curriculum. If that is the line to be taken the Department will find some helpful recommendations in the report of the Reform Committee on this very topic. The Reform Committee advocated the absorption of Logic in the teaching of Method and of Ethics in the study of principles pursued in the Education class. That would reduce the plethora of subjects a little, till in the fulness of time some one in authority discovers that a few subjects well taught are more valuable than a multitude administered in tabloid doses, or, better still, till it is realized that two years is far too short a time for the training of any teachers.

WALES.

At the last meeting of the University Court which was held at the University College, Aberystwyth, the question of finance was discussed at considerable length for, in spite of the recent increases in contributions from the Treasury and the Welsh Councils, the University is still faced with a serious financial situation. It is estimated that the total income of the University is £141,575 and the expenditure £29,120, thus leaving a balance

of £112,455 for apportionment between the four University Colleges, from the University Pool. The total expenditure of the four Colleges is £209,398; and their own income amounts to a total of £91,911, so that there will be a deficit of £5,032. From this statement it is clear that the present income from all sources is insufficient to meet expenditure on the present basis, without providing new developments. In a recent inquiry into the present work of the Constituent Colleges, it was found that in some departments there was much understaffing and a growing need for an improved standard of maintenance of laboratories and libraries. The Colleges, therefore, cannot economize further without lowering their standard of efficiency, and new sources of income must be discovered to place their present activities on a satisfactory level.

After investigating every possible source, the Council recommends that an increase in the tuition fees

Higher Fees. offers the only additional solution of the difficulty. The hardship involved in the adoption of this recommendation is not great as the fees in the University of Wales are lower than in any other part of the United Kingdom, and in the aggregate represent only 19.5 per cent of the total income as compared with 34.1 per cent in England, and 30.2 per cent in Scotland. The average cost per full-time student at the Colleges is also lower than in other Universities, with the exception of the Universities of Glasgow and Edinburgh. In the face of these figures it was impossible to adopt a resolution which was moved at the Court, to the effect that University education should be free. It was resolved that the fees be raised by 25 per cent as a maximum. The Council expects that this may lead to a reduction in the number of students, though it is not likely that any student who is fitted by his intellectual calibre for University training will thereby be excluded.

In an interesting paper read before the Welsh branch of the Modern Languages Association, Mr. E. D. Jones, head master of the Barmouth School, dealt with the question of teaching Welsh in our secondary schools. The Welsh pupil is learning four languages at least, Latin, French, English, and Welsh, and therefore it is exceedingly difficult for him to develop his vocabulary satisfactorily in any one of them. This fact must tend to induce lack of thought and poverty of expression, and Mr. Jones recommended that more time be given to the use of the mother tongue, which is Welsh in many districts, and that the scope of its study be considerably enlarged. Even English composition would be improved if this were done. The position of Welsh is also affected by the excessive number of subjects which the schools are obliged to admit into their time-table by the pressure of examinations, and the utilitarian demands on the school, though unfortunately Mr. Jones does not indicate how he would curtail the curriculum. In Wales, as elsewhere, it has become the fashion to talk glibly about an overloaded curriculum and all its attendant evils, but so far no one has been able to find a solution which is in any way practicable or satisfactory. The attitude of the public in Wales with regard to this question has been somewhat peculiar and even contradictory. For many years it was the fashion to put forward strong claims for the inclusion in the time-table of almost every conceivable subject, but recently it seems to be the fashion—or shall we call it the "stunt"—to insist on a diminution in the number of subjects, so that the unlucky head master is much bewildered. The Welsh Department is the chief offender in this respect. Its annual reports lately are full of solemn references to "overloaded curricula," "excessive homework," &c., but for real guidance to a solution of the problems involved, one looks in vain. The usual suggestion is that a commission of inquiry be formed, even though recent experiences have not increased our faith in their efficacy.

There were great crowds at the National Eisteddfod, held at Ammanford, and it was unanimously agreed that the standard of the literary competitions and of music was very high, and in some respects an advance on that in preceding Eisteddfodau. As showing the wide interest which the Eisteddfod evokes, it may be stated that the winner of the Bardic chair was Mr. J. Lloyd Jones, M.A., B.Litt., Professor of Celtic in the University of Dublin. His subject was an ode on "The Winter," and it was praised very highly by the adjudicators. Concurrently with the Eisteddfod meetings, there were also held meetings of Welsh learned societies, such as the Bibliographical Society, and the Welsh University Union, and some interesting discussions took place at these gatherings. At the latter Prof. H. Lewis, of the Swansea College, proposed that the Union make representations to the Court of the University of Wales to make Welsh com-

pulsory for all students for degrees, and in spite of the opposition of the Bangor and Cardiff Old Students' Association, it was carried by a small majority. A paper on "Welsh Culture and Modern Industrialism" was read by Rev. W. Edwards, M.A., in which he emphasized the danger for Welshmen of following the voice of authority or tradition in preference to working out their own conclusions. It is all very well to be proud of "the land of bards and songsters," but life has wider issues and sterner facts which it would be well for the Welshman to face. He is too apt to leave matters social and economic to others; which is possibly the reason why so many miners' leaders in Wales are Welsh in nothing but their pay. Welsh culture will have no part to play in the great question of modern industrialism until it broadens out and includes the study, not of heavenly things only, but of the grim realities of economic and industrial problems.

LOCAL EDUCATION AUTHORITIES.

The Warwickshire Education Committee has had under consideration two resolutions of the Council's Limitation of Expenditure Committee. The first suggests that in secondary schools the size of classes should be increased to an average number of 22. It appears that to give effect to that suggestion it would be necessary to dismiss 21 assistants. The Education Committee does not think it is practicable to fix a common standard of staffing for schools that vary in size from 60 to over 420 pupils. Some have a fair proportion of older pupils who do advanced work and others have few pupils over 16 years of age. It is stated that in many of the schools teachers cannot work longer hours without affecting their freshness and efficiency, and that from the point of view of the children, any limitation of staff, such as that proposed, would be disastrous to the teaching. They have, therefore, informed the Limitation of Expenditure Committee that it is impossible to fix a flat rate to cover all schools, but that the staff will be reduced where possible. The second matter to which the attention of the Education Committee was directed was the heavy cost of the training of teachers, but the Education Committee strongly deprecates any reduction in the number of teachers in training, and point out that the increased cost is largely owing to the increase of fees in secondary schools, an expense that comes back directly, or indirectly, into the Council's pockets.

The Warwickshire Committee states that it has carefully considered the question of the position of the Day Continuation School at Stratford-on-Avon, together with two petitions sent to the Council, and they are reluctantly forced to the opinion that it will be inadvisable to continue the school. The Board of Education has therefore been requested to obtain statutory powers to permit the school to be closed.

The reports of Sub-Committees submitted month by month to the Education Committee of the London County Council present, with remarkable fidelity to detail, the multifarious proceedings of the Authority. Among many interesting matters reported to the meeting at the end of July are the proposals in regard to the instruction of children who attend elementary schools below the compulsory age. The intention is to employ, as an experiment, a number of women with lower academical qualifications than those of certificated or uncertificated teachers, and as a preliminary to provide them with an intensive course of training. The young women will be designated "Infants' Assistants." Candidates must be between 18 and 30 years of age on appointment, and their tenure of service will be strictly limited to seven years. The remuneration will be £110 per annum rising by increments of £7 10s. to £155. While it is to be regretted, it is presumably inevitable, that Authorities maintaining institutions attracting students from the areas of other Authorities should require such students to pay special fees. From September 1, the fees to be charged to Out-County students enrolling at or continuing in attendance at Polytechnics, Technical Institutions, Schools of Art, Trade Schools, Domestic Economy Schools, and Evening Institutes, will be for full-time day students £60 per annum, or £48 per annum, according to the character of the instruction provided; the fees of part-time day students being in proportion. Evening students at these institutions will be required to pay at the rate of £3 5s. or £4 a session for one evening a week; half the amount will be charged to part-time students living outside but working inside the administrative County of London.

MILLS & BOON, Ltd., 49 Rupert Street, London, W. 1.

The Lancashire Education Committee has approved in principle of the proposal to establish a

Lancashire. Research Station for the Poultry Industry on condition that the arrangements for the management, supervision, and finance of the Scheme be the subject of negotiation between the Committee and the National Poultry Council or their authorized representatives, without the exercise of any supervision or control by the Ministry of Agriculture and Fisheries, and that approval be given by the Committee to a detailed scheme, indicating the scope of the experiments and the arrangements as regards management, supervision, and finance. It will be remembered that the Ministry of Agriculture are in a position to expend a sum of £50,000 out of a special fund sanctioned by Parliament under the Corn Production Acts for the establishment of the Research Stations, and it is suggested that the station in Lancashire should be concerned with breeding experiments in connexion with egg production. The Government will contribute £2,500 towards capital expenditure and £725 per annum towards maintenance for five years.

The Staffordshire Education Committee has resolved: (a) That in order to secure places for such entrants as it is desirable to appoint, notice be given to terminate the engagements of as many married women as can be dispensed with from time to time. (b) That the Director report to the Elementary Requisitions Sub-Committee on each change of staff consequent upon resolution (a). (c) That all married women teachers be informed that this policy will be continued as circumstances require. From a return made by Sir Graham Balfour, there are now 424 married women teachers in the employ of the Committee, 22 head mistresses, 108 certificated assistants, 256 uncertificated assistants and 38 other teachers. In adopting this policy the Committee have no doubt had in mind the very serious effect which the unemployment of young unmarried teachers will have on future recruitment for the profession.

Mr. W. A. Brockington, the Director of Education for Leicestershire has prepared a valuable report on the distribution of public elementary schools and their relation to each other and to secondary and central schools in the same area. "The problem," he says,

"has hitherto been considered mainly from the standpoint of economy in teaching staff." It claims, however, wider consideration than this. No scheme of county Education can be organized efficiently which does not bring into account the economic and social changes that have occurred since the schools were first distributed, and the gaps in the school system were filled up, as a result of the Education Act of 1870. Fifty years have passed. No previous fifty years in the world's history have witnessed a similar broadening of outlook and development in the intellectual needs of the community. There has been a growth in the number of those children who require something beyond the bare essentials of a primary education. Mr. Brockington's general conclusion is that centralization rather than amalgamation is the line of least resistance.

The Thirty-third report of the Libraries Committee of the County Borough of Croydon contains an interesting account of the efforts made to extend the resources of Libraries to children. Carefully selected books are now distributed through three agencies. There are certain great books which every child should have the opportunity of reading during school life, and it has been the policy of the Committee to provide, as far as possible, sufficient copies of these works to meet all demands. A promising feature has been the increase in the reference work. The Reference Library now consists of 230 books and these were consulted some 6,730 times by the children in answering general knowledge questions and preparing homework, and well as in reading. Library talks for children were also continued throughout the winter and were attended by over 4,000 children.

AWARD OF MUSIC EXHIBITIONS.—The Exhibitions offered annually by the Associated Board of the Royal Academy of Music and the Royal College of Music, which carry with them free tuition at the Academy or the College for two or three years, have been awarded as follows: At the Academy: Dorothy E. Tanton, Hastings (violin); Elizabeth L. Mawson, Jersey (violin); and Julia Wolfe, London (pianoforte); at the College: Margaret E. Ledlie, Belfast (singing); and Wilhelmina P. Arnott, London (pianoforte).

FOREIGN AND DOMINION NOTES.

GERMANY.

We have pleaded for tolerance in English and American schools towards dialect, and for tolerance in America for our dialects, in England for American dialects. In Germany the question of dialect is much more important than in the Anglo-American world. The *Mundarten* are many—"their number is now legion," says Behaghel; "in the canton of Bern alone no fewer than thirteen have been distinguished." They are widely discrepant. The *Schriftsprache*, or written language, cannot put them out of office: it lacks names for numerous plants and animals, cooked dishes, and domestic and agricultural implements. What is the German for "a horse"? Before the war German schoolmen were looking to an obliteration of dialects: "whilst the tendency to union," we quote Behaghel again, "is still only in its very first beginnings, it will doubtlessly increase, and dialects are doomed to inevitable death." Now there is a movement to preserve and utilize them, with which end in view the Prussian Minister of Education recently issued a circular, "Zur Pflege der heimischen Mundart." If the teaching of German, he says, is to be quick with life and fruitful, it must call in the help of the home speech; the local dialect compared with High German exhibits the development of the German language; the use of it makes the children express themselves simply and naturally; it enshrines old, sweet imaginings and appeals powerfully to the ears of the people. To return to Anglo-American dialects, we may have been wrong in seeking their ultimate fusion; but whether a dialect should be cultivated or not seems to depend on its intrinsic value. In any case, the school must not deem "vulgar" those who bring into it a not insignificant part of their inheritance.

You will find on fairly thinking of it that the man who "matters most" in the modern State is the man who can order the printing of paper money. The Germans have forgotten what their forefathers knew. According to the Volksbuch "Fortunat und seine Söhne," whenever Fortunatus

opened his purse he found in it ten *gold* pieces of the currency of the land in which he might happen to be. He would hardly have travelled so cheaply and so easily as he did had the purse yielded only a hundred *paper* marks. But let us to the present. The printing press would have exterminated German teachers—just as it could exterminate English teachers—long ago were it not for a neat device. The teacher has a basic salary, an *Ortszuschlag* or allowance dependent on the place of his activity, and a grant in respect of children. When the printing press sends up the nominal cost of living, the State adds a certain percentage to salary, place allowance, and grant for children. From June 1, 1922, there is conceded to teachers and other officials a *Teuerungszuschlag* of 160 per cent on the first 10,000 Mk. of income, and of 105 per cent on the rest, the increase being calculated on the salary fixed in October, 1921. As compared with the scale of salaries in May, 1922, the addition is one of 40 per cent. For example, an official who received from October, 1921, 32,880 Mk. and had risen to 57,310 Mk. in May, 1922, will from June 1st receive 69,870 Mk. So far, if the increase of salary were justly proportioned to the increase in the cost of living, all were well. But to pay the new rates *more money must be printed*; so that the wages of the teacher sink as he sleeps. Gutenberg and Fust are accursed names in scholastic circles at the present time; and indeed the making of paper money transfers wealth in a way that the profoundest economist cannot trace with any exactitude.

On June 6 and 7 Das Akademische Institut für Kirchenmusik in Charlottenburg—where are trained music teachers for higher schools, organists, and choir-masters—celebrated its Centenary with a formal ceremony and two concerts.

Upon this occasion the Prussian Minister of Education announced that the time of study in the Academy would now be lengthened to six half-years; that women would be admitted; and that the Institute would be raised to equality with the Universities and Technical *Hochschulen*. German music-lovers, as we have before related, hope to exalt music from its subordinate post in higher institutions to rank with literary and scientific subjects.

The first notice of the first volume in Dr. Knapp's series was as follows: "Dr. Knapp does not serve up the usual trite commonplace stuff that too often finds a place in popular handbooks. He has made a real study of the questions with which he deals, and is in contact with the recent important literature dealing with his subject."—*The Journal of Education*.

The following is a notice of the most recent volume by Dr. Knapp: "Dr. Knapp's manuals have now won a place for themselves in the newer school commentaries on the Gospels and the Acts, and this edition of a smaller work on St. Matthew follows on the lines of its predecessors."—*Times Educational Supplement*.

1 Fleet Lane, Ludgate Circus, London, E.C.4.

Legal journals communicate the following judgment of the Hanseatic Oberlandesgericht. A housekeeper, hearing a noise on the staircase, drove the children that caused it away and incidentally gave an eight-year-old boy a slight blow, so that he fell and grazed his knee. The housekeeper being brought before the Court for assault has been exonerated. A person, it was ruled, may chastise another's child if immediate punishment is appropriate and neither parent is present to inflict it. The judgment is of the austere, old-fashioned sort. But will not the children of New Germany rise in rebellion and massacre the judges? By the way, it would interest many mothers to know what English law says in the matter; the issue is raised daily in our slums.

May one strike another's Child?

ITALY.

Let it not be thought that we ourselves are attacking the Montessori Method; it would be improper, however, for us to conceal the fact that it is being subjected to severe criticism in its birthland, Italy. At Rome the Method was introduced experimentally into the lower classes of two primary schools, that called the "Adelaide Cairoli" and that called the "XX Settembre." To test the results obtained, two inspections have been made, one Governmental, the other Communal. The report of the former recommends that the experiment should be continued, but restricted to the lowest two classes; that of the latter is wholly damnable. In an article, "Il 'metodo Montessori' nella scuola primaria," published by the *Rivista Pedagogica* (xv. 5-6), Raffaele Resta, one of the Communal inspectors, sets forth the reason of this condemnation, concluding thus: "Since the results are in a limited measure good, and otherwise either mediocre or negative, and since the Commission appears to have established that such results are a consequence of the character of the method, it feels bound to recommend the cessation of experiment with the Montessori Method in any class of a public elementary school." It was perhaps in Italian composition that the greatest weakness was shown, and the teachers contended always for *vagueness*, fearful of close probing. Another article in the same number of the

Rivista Pedagogica, "La libertà infantile nel metodo Montessori," by Attilio Scarpa, pronounces the Method to be a failure on the moral side: "Il bimbo non dev' essere lasciato in balia di sè stesso nella dura conquista della bontà."

FRANCE.

It is told (*Revue Pédagogique*. lxxxi. 7) that a *professeur d'école normale* visits the slaughter-house to obtain suitable specimens for his pupils to dissect—following the good tradition of French science; for did not Descartes visit his butcher to study the workings of animal mechanism? But it is economy rather than conscientiousness that France requires from science teachers at this moment. Here is an example. The Conseil général of Vaucluse having voted 2,000 francs for scientific appliances in primary schools, M. l'Inspecteur d'Académie appointed a committee to direct the teachers in the employment of this modest sum, and it drew up a list of the cheapest experiments. It is pointed out that the famous scientist, Henri Fabre, to prepare hydrogen before his class, used a mustard bottle having the cork pierced with a goose's quill and a pipe-stem. If science is to be controlled in this way, its progress will be in the direction of least expenditure. On the other hand, we have known in England science teachers who demanded costly apparatus, which, obtained, was discarded after a few exhibitions of its use. A temporary tightening of the purse-strings may serve to check lavishness in the lecture room. But for research there should be no grudging; to make new conquests science must have the sinews of war; nor can we at once live by science and starve it.

Pedagogic France has been much exercised by the question of holidays. The Minister of Public Instruction, after consultation with the Conseil supérieur, has regulated them as follows. Henceforth, and from this year, *les grandes vacances*, or long holidays, will last two months uniformly in all schools; but the beginning and the end of that period will vary regionally. Apart from the Easter holidays, which will be of ten days' duration,

INDIA.

The Bureau of Education's "Indian Education in 1920-21" relates to a period of unrest and tells of the effect of political agitation on students. As to the development of national education, which would be viewed from England with much interest, little was done: the tendency of the agitation was to destroy rather than to construct. We quote what is said on this subject. "The reports show no movement so far towards a more truly national type of education in the 'national' institutions that have been called into being. Even the 'Charkha' on its educational as apart from its economic side is only a development of manual or vocational training which is already in vogue in other countries and has been steadily encouraged for some years in this country. The more extensive use of the vernacular as medium of instruction covers educational methods rather than aims, and will no doubt be pressed by all Governments if and when they are convinced that it has popular as well as educational support. There are no signs of any reaction against Western subjects, languages, and ideas. In fact one Province ascribes the popularity of 'national' schools to the fact that English is therein begun earlier than in 'recognized' schools!"

CANADA.

In Ontario the Report for 1921 of the Minister of Education shows that, although in this Province as elsewhere the spirit of Economy has been abroad, "the progress made by the elementary and secondary schools of Ontario has been substantial and continuous. Public interest in education has shown no signs of flagging. The readiness of both rural and urban communities to enter upon necessary expenditures has been remarkable. The attendance of pupils has improved and is now better than

in previous years. The salaries of teachers have risen. The professional training schools are well attended and the supply of teachers is not inadequate. Although the burden of general taxation on account of necessary purposes is heavier, a generous policy toward the schools has not ceased, and, in general, the Province has maintained unimpaired its historic zeal for education."

The Adolescent Act, passed two years ago, was proclaimed effective last September in municipalities of five thousand or more inhabitants. Under the provisions of this Act the age of compulsory education has been raised from

fourteen to sixteen years. Before they become operative a child on attaining the age of fourteen, or even at an earlier age if he had passed the High School Entrance examination, had the legal right to discontinue attending school. Large numbers availed themselves of this privilege. With their limited education these were poorly equipped to succeed in life in an age in which trained intelligence counts so much for success. Now the further education of such children will be cared for: some will attend the high schools, others the vocational schools, and still others will continue their studies in the public schools. Already the effects of this legislation are being felt in the high schools in an increase of attendance, an increase which is likely to grow to great proportions in the not distant future. There are 144 continuation schools in the Province, and the close connexion between them and rural life is shown by the fact that more than half the pupils attending at them are the sons and daughters of farmers. Ontario has an efficient system of high schools and is successful in keeping the pupils in them. The average ages of the pupils on June 1, 1921, were: Lower School, Form I: Boys 15.05 years, Girls 15.08; Form II: Boys 16.15, Girls 16.18; Middle School: Boys 17.48, Girls 17.39; Upper School: Boys 18.38, Girls 18.15.

From HORACE MARSHALL & SON'S LIST

Outlines of European History

Part III (1270-1485). By A. D. GREENWOOD, F.R.Hist.S. Ready immediately. Price 3s. 6d. net.

A new volume in this History of Europe, which is intended for pupils studying short periods in considerable detail. The series is adapted for use in the fourth or fifth year of the Secondary School Course, and the authors have made it as interesting and vivid as possible.

The *Journal of Education* says of Part VI: "It is at once clear and full, accurate, and interesting."

Other parts now ready are:

Part I. 312 A.D.-911. By C. L. THOMSON, F.R.Hist.S. 3s. 6d. net.

Part II. 911-1271. By A. D. GREENWOOD, F.R.Hist.S. 4s. net.

Part VI. 1789-1914. By C. L. THOMSON and M. B. CURRAN. 6s. net.

A First School Atlas of English History

By B. V. DARBISHIRE, M.A. Price 1s. 4d. net.

This Atlas contains about forty maps. In addition to those necessary for illustrating the history of the British Isles themselves, a number are devoted to the history of the British Oversea Dominions.

Genealogical tables of the Kings and Queens of England, from Eghert to George V, are also included, and their arrangement presents certain novel features. Teachers will find that, besides clearly illustrating questions of succession to the throne, they form a sort of skeleton outline of history which will be very useful for purposes of revision.

A Child's Story of Great Britain

By C. L. THOMSON, F.R.Hist.S. Price 2s. net.

This little book is intended for children of from eight to ten years old. It is written in simple language, and printed in large type, and contains many illustrations.

Historical Biographies

By C. L. THOMSON.

A series of short lives of great men written in an interesting and fairly detailed manner. Biographies written for school use generally extend over too long a time to render them of much use in studying a special period, and many of them are adapted only for the use of very young pupils. It is hoped that this series, which will gradually be extended, will be found useful for the private reading of pupils between thirteen and sixteen years of age, especially those in schools which have adopted the Dalton method of study.

European Biography. Period of Renaissance and Reformation. By G. HOME, M.A., late of Newnham College, Cambridge. In Two Parts. Now ready. Price 2s. net each.

These volumes contain, among other biographies, lives of Louis XI, Isabella of Castile, Columbus, Lorenzo di Medici, Savonarola, Leonardo da Vinci, Erasmus, Colet, Luther, Knox, Loyola, William the Silent, Admiral de Coligny, Queen Elizabeth, Raleigh, Drake.

English Social Reformers. By GEORGE GUEST, B.A., Head Master of St. Paul's School, Bournemouth. In Two Parts.

Part I now ready. Price 2s. net.

These biographies deal either with great historical characters treated especially in connexion with their influence on the social life of their time, or with great inventors, economists, and philanthropists. The subjects include, among others, Wycliffe, Caxton, Jethro Tull, Arkwright, Stephenson, Peel, Cobbett, Cobden.

TOPICS AND EVENTS.

DUNDEE SCHOOL OF SOCIAL STUDY AND TRAINING.—Inaugurated in Dundee in October, 1920, in connexion with St. Andrews University and Grey Lodge Settlement, this school provides a lecture course and practical training for students who wish to make social work their profession, and it also welcomes those who may wish to do voluntary social work. The course usually covers a period of two years, but a Graduate may take the course in one year under special conditions. Classes are held in Economics, Economic History, Political Thought, Public Health, &c. Visits are arranged under the direction of the Medical Officer of Health, to common lodging houses, sanatoria, child welfare centres, the infant hospital, the poor-house, dairies, mills, factories, &c. The practical work is organized from the Settlement, and consists of rent collecting, infant welfare work, clubs for boys and girls, special relief work, country holiday visiting, employment exchange work, indexing and filing experience, and factory welfare work. During the latter half of the period of training specialization is arranged for. Further particulars may be obtained from Mr. Bennet, Secretary of the University.

SUMMER SCHOOL OF EURHYTHMICS AT OXFORD.—One of the most interesting summer schools at Oxford was that of the London School of Dalcroze Eurhythmics which opened on July 31. The inaugural address was given by Sir Hugh Allen, previously known in musical centres as the conductor of various Bach Choirs, and now known throughout the world as Professor of Music in the University of Oxford, and Principal of the Royal College of Music. Sir Hugh delighted his hearers with a comprehensive survey of the history of music in Oxford with its ups and downs from the earliest times to the present day, even including a reference to the Oxford Musical Festival of last term in its historical aspect. The address was enlivened by many quaint and characteristic touches of humour, as when he told how his own professorship was derived from a worthy benefactor of the seventeenth century who never played in tune, and when he compared the chilly reception of one who rashly asked a Dean of Christchurch for the use of the dining hall for a

concert, with the spectacle of another Dean of Christchurch, fifty years later, playing a duet with the Principal of Brazenose at the 1,000th meeting of the University Musical Club. What Sir Hugh did not tell the audience was what he himself had done for the cause of music in Oxford during the latter half of those fifty years. One wonders if he realizes even a small part of all that Oxford owes to him. Another interesting feature of the School was a demonstration class lesson given to small children. Such a lesson, which is unrehearsed, is literally a practical demonstration of the Dalcroze method, and conveys better than any written words could do, its actual and potential value in the scheme of education, not only within but outside of the domain of music. Such demonstrations would be useful if they served no other purpose than that of disabusing the minds of some people of the idea that a school of eurhythmics is only a kind of super-dancing class. The Dalcroze method, like the liberal education of our public schools and universities, is only "learning to learn," but in what a charming and delightful way!

THE INSTITUT FRANÇAIS DU ROYAUME UNI.—A very attractive programme has been drawn up for the coming scholastic year. Besides many lectures to be given by its own staff of professors and teachers, the Institut has arranged for a number of eminent French people, well-known in the literary and scientific circles of France and other countries, to deliver lectures at its headquarters in Cromwell Gardens, South Kensington. In connexion with the activities of the Institut Français for the consolidation of the "Intellectual Entente," it is interesting to recall the successful performances of Molière's "L'Avare" and "Le Misanthrope," by the Comédie Française at His Majesty's Theatre in May last. These performances were much appreciated both by the critics and the general public and proved of a high educational value to students of French literature and art in this country. In "Le Misanthrope," M. Duflos was admirable as Alceste and Mme Cécile Sorel most fascinating as Célimène; the combined effort of the whole company was such as must be expected of their reputation and the traditions of the Théâtre Français. But those who saw Harpagon's convulsions and heard his querulous lamentations at the loss of his

(Continued on page 592.)

SESSION COMMENCES OCTOBER 2nd.

"caissette," as rendered by M. de Féraudy, will ever be haunted by the picture of a tragedy, the terrible humour of which evokes from the spectator, but with difficulty, expression in laughter.

EDUCATIONAL CONFERENCE IN OXFORD.—The City of Oxford Teachers' Association is holding its third Educational Conference in the Examination Schools on Friday and Saturday, October 6th and 7th. The opening address by the Rev. Canon Sawyer, Head Master of Shrewsbury, will be followed by an address on "Nature Study in a School's Curriculum," by Mr. W. T. Cresswell. Other interesting papers announced are "Graphic Methods in the Teaching of Arithmetic," by Mr. A. L. Perkins, "The Dalton Plan," by Miss R. Bassett, and "The English Report and After," by Mr. George Sampson. A public meeting in the Town Hall is to be held on Friday at 7 p.m. when Demonstration Lessons will be given showing how musical training, physical training, and singing are being carried on in the schools, and the proceedings will terminate with a conversazione on the Saturday evening in the South Oxford Schools. The Conference will be open to teachers in elementary and secondary schools in Oxford and the district, and all other persons interested in education. Further particulars may be obtained from the Honorary Secretary, Miss L. Gee, 45 Chalfont Road, Oxford.

EQUAL FRANCHISE.—The Prime Minister has consented to receive, at the beginning of October, a deputation organized by the National Union of Societies for Equal Citizenship to present to him a memorial signed by 222 Members of Parliament and a large number of nationally organized associations, asking that the Government should introduce and pass legislation through all its stages, before the General Election, which will give women the vote on the same terms as men.

SECONDARY SCHOOLS ASSOCIATION.—The annual meeting of the Secondary Schools Association (25 Victoria Street, S.W.), was held on July 6 last, and the annual report for the year 1921-1922 has been issued. The Association, which aims chiefly at safeguarding the interests of secondary education by promoting the interchange of experience among secondary school governors and by acting as a connecting link between the secondary schools and the Board of Education, devoted its

attentions during the year chiefly to the revision of the Teachers' (Superannuation) Act, 1918, to the provision of regulations for prolonging the period of school life, and to the question of the payment of grants to secondary schools by the Board of Education (Circular 1259). In regard to the second of these questions two specimen enrolment agreements are printed in the report; in both cases the parent or guardian binds himself to keep the child at school for a definite number of years and is liable to forfeit a definite sum if the contract is broken without good reason. The Association is not large but about one hundred and fifty well-known secondary schools are represented and it does valuable work in the cause of secondary education.

HOWELL'S SCHOOL, DENBIGH.—Friday, July 21, was Speech Day at Howell's School. The Lord Bishop of Bangor was the special preacher at the service held in St. David's Church, and the chair at the prize-giving was taken by Canon Redfern in the absence of the Archbishop of Wales, who said in a letter, "It is with exceptional regret that I find myself unable to be present. . . . Had I been with you, I should, as chairman, have taken the opportunity of saying . . . that we look forward with well-assured confidence to the future of Howell's School under the guidance of Miss Robinson. The school . . . is an example and an inspiration to the whole of the principality in the higher education of girls." The Head Mistress then read her report, which spoke of the growth of the school, and of the many successes gained during the past year. The prizes were presented by the Hon. Mrs. Brodrick. After luncheon the girls gave a performance in the open-air of Gilbert Murray's translation of Euripides' "Alcestis" for which the Cloisters made an excellent stage.

THE NAVY LEAGUE.—The Navy League is a non-partisan voluntary association of British peoples banded together for service to the Empire, particularly in connexion with matters concerning the sea. Its fundamental policy is complete naval protection for British subjects and British commerce throughout the world. Among its objects, the League seeks public support for the principle of a navy of the requisite standard of strength for the maintenance of our trade and Empire, and in pursuance

(Continued on page 594.)

1,000 MEDALS AND PRIZES !!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,
66 Trinity Street, Huddersfield,

who will forward copy Index and Specimen Pages on receipt of Post Card addressed to P.O. Box A 27, Huddersfield.

**367 Pages. 27th Edition. Price 3/6.
100 Exercises. 350 Questions.**

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Royal Society of Arts, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Royal Society of Arts, the College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C.** are included. **200,000 copies sold.**

LONDON : SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LTD.

THE STUDENT'S BUSINESS METHODS

and

Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
66 Trinity Street, Huddersfield,

who will forward Specimen Pages and Index on receipt of Post Card addressed to P.O. Box A 27, Huddersfield.

**Tenth Edition. 380 Pages.
Price 3/6.**

80 TEST and EXAMINATION PAPERS, containing 1,300 QUESTIONS.

This is the only **practical up-to-date book on Commercial Correspondence and Office Work** and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graduated** and the teacher is **saved the drudgery of preparing Test Papers** one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Handbook** for the **Junior** in the **Office**. **100,000 copies sold.**

SYSTEMATIC EXERCISES IN ENGLISH INTONATION.

H. E. PALMER, author of "The Oral Method of Teaching Languages."

This book is an original and brilliant piece of research work on the nature and uses of English Tones.

Its object is to explain to foreign students what the English system of Intonation is and how to use it; and to provide teachers of English and of English phonetics with a simple handbook with graduated exercises so that they may teach foreign students how to intone English sentences.

PHONETICS WITHOUT SYMBOLS. French Phonetics for Schools.

G. C. BATEMAN, Diplômé d'Etudes Supérieures, Docteur de l'Université de Caen, Organizing French Master, Uppingham School.

This little book sets out a method of teaching the sounds of French and of practising Sound Drills without the use of Phonetic Symbols—but with the use of Phonetics. It has an additional advantage in that the pupils get accustomed to ordinary French orthography and its elementary principles from the time at which they begin the Sound Drills.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LTD., and from all Booksellers.

and explanation of this principle, the League endeavours to educate as many as possible to the fact that the bulk of the raw material used in our manufactures and more than two-thirds of the food we eat is transported across the seas. Another direction in which the League is active is in providing and maintaining training ships to help boys who desire to take up a career in the Royal Navy and Mercantile Marine, and to organize Sea Cadet Corps with the view of teaching boys to be good citizens of the Empire by learning discipline, duty, and self-respect. The League also administers the Navy League Overseas Relief Fund, which provides for the education and advancement in life of children of seamen who lost their lives or became permanently incapacitated by reason of the Great War. Communications for the League should be forwarded to 13 Victoria Street, S.W. 1.

EDUCATION AT THE HULL MEETING OF THE BRITISH ASSOCIATION.—The proceedings of the Educational Science section of the British Association will open at 10 a.m. on Thursday, September 7, with the presidential address of Sir Richard Gregory upon "Educational and School Science," to be followed by a discussion upon it; and arrangements are in active preparation for this to be opened by distinguished representatives of the physical and biological sciences. On Friday an important joint meeting with the Psychological section will be held to discuss Psycho-analysis; papers have been promised by Dr. C. W. Kimmins, Dr. Crichton Miller, Prof. Pear, and Dr. R. G. Gordon; the discussion will open out the whole field of the relation of psycho-analysis to education, and such questions as "The psychopathic child," "Neuroses, drugs, and crime," "Pathological stealing, lying, and truancy" will be dealt with. On the Friday afternoon two addresses upon Imperial Citizenship will be delivered by Lord Meston and the Rt. Hon. Sir Joseph Cook (High Commissioner for Australia); it is probable that Bishop Welldon, Dean of Durham, will also speak. The greater part of the morning of Monday, September 11, will be occupied by a discussion upon "English as a basis of national education," the openers being Prof. Edith Morley, Mr. G. R. Pocock, of Dartmouth College, and Mr. J. H. Fowler; whilst the discussion is expected to centre chiefly round the report of the Departmental Committee it will not be altogether confined to this, and it is hoped

that the result of the meeting will be to obtain a wider recognition of the value of the mother tongue as a basis of all education. On the last day of the meeting the morning will be divided into two parts; during the earlier portion papers will be read by prominent local educationalists upon individual work in schools, with special reference to experiments in Hull. The latter part of the morning will be devoted to a joint discussion with the Engineering section upon the "Effect of Reformed Methods in teaching Mathematics"; Prof. T. P. Nunn has prepared a valuable contribution upon the teaching of geometry, and Mr. R. C. Fawdry, of Clifton College, will review the history of the movement and its possible future development. Other papers promised are "Advanced work in Elementary Schools," by Mr. R. C. Moore, and "International Students' Organizations," by Mr. J. S. Macadam.

SCHOOL TEACHERS' SUPERANNUATION ACT, 1922. Circular 1277, issued by the Board of Education, directs attention to the provisions of the Act and to the Statutory rules under which it is to be enforced. No teacher in "recognized" service under the age of thirty-five will be exempt from contribution. In many cases the Board has already announced to teachers that they cannot qualify for pensions on the ground of age, and it is stated in the circular that the production of the official letter will be sufficient to show non-liability for contributions. Similarly, teachers who have been informed by the Board that they are debarred from the benefits of the Act on medical grounds will be relieved of the necessity of contributing on producing the official letter. During the present official year it is left to the local authority or employing body to decide as to the amount of salary to be deducted each month or term, but 5 per cent of the salary from June 1, 1922 to March 31, 1923, must be deducted by the latter date. Thereafter 5 per cent of salary is to be deducted from each salary payment until May 31, 1924.

INSPECTIONAL POWERS OF THE CENTRAL WELSH BOARD.—The Central Welsh Board has powers of inspection in intermediate schools only, and at a recent meeting of the Board it was suggested that its effectiveness in directing education in Wales would be much increased by co-operation of the Board's inspectors with

GEORGE GILL & SONS, LTD., 13 Warwick Lane, LONDON, E.C. 4.

“IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence.”

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness:—

“Two years ago you sent me a pupil named ——. Through her parents I have had **four** good pupils this year from four different places, and through two of these have **five** more coming this term: that is, ten pupils from paying **one** commission.”

“**Personally, I have found your firm to bring in 90 per cent. of the pupils who come to me through Scholastic Agents.**”

“**Hearty thanks for your continued recommendations, which bear such excellent fruit in the number of boys that I get through you. I find that out of my 32 boarders 16, or exactly one half, have been sent here by you.**”

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

J. & J. PATON, EDUCATIONAL AGENTS,
143 CANNON STREET, LONDON, E.C. 4.

Telephone: Central 5053.

those of the Welsh Department. According to the *County Schools Review*, the Hon. W. N. Bruce, who opened the discussion, outlined a scheme whereby inspectors of the Central Welsh Board should be allowed a share in the inspection of central schools, training colleges, &c., and H.M. inspectors should be invited, in special circumstances, to visit intermediate schools. General approval of the suggestion was given by the Board and a small sub-committee was appointed to discuss details. The *County Schools Review* refrains from expressing any definite opinion of the scheme as it stands, but states that while an extension of the powers of the Central Welsh Board will be welcomed in all schools, there will be serious opposition to any attempt to impose again any system of dual inspection. We shall await with interest the detailed suggestions put forward by the sub-committee appointed to examine the question.

SWANLEY HORTICULTURAL COLLEGE.—The annual report for 1921 of the Horticultural College, Swanley, presented on Prize Day, July 25 last, records a good year's work at this excellent institution. As some of our readers may know, the College provides a three-year diploma course, a horticultural certificate course, a commercial or smallholders' course which aims at training women for the management of small holdings, both of which occupy normally six terms, a new course for the degree of B.Sc. in horticulture of the University of London lasting four years, and short courses in gardening, dairy work, poultry keeping, fruit and vegetable preserving, and bee-keeping. During the past year efforts have been made to complete numerous repairs which had been postponed owing to war conditions, a new dairy was erected, and some of the existing buildings were converted into a chemical laboratory. The poultry department is being re-organized, new strains having been introduced, and in addition a small herd of hardy goats of English breed has been introduced. Of the efficiency maintained in the College orchards, it is sufficient to note that the silver-gilt Banksian medal for a collection of apples was awarded to the College at the Royal Horticultural Society's Fruit Show while numerous prizes have been won at agricultural societies' and fruit shows. Miss F. R. Wilkinson has resumed temporarily the post of Principal rendered vacant by the resignation of Miss F. Micklethwait.

PRIZE COMPETITIONS.

The winner of the June Competition is Mr. A. R. Allinson, 31 Gloucester Crescent, Regent's Park, N.W. 1.

The winner of the July Competition is Mrs. H. Swire, 443 Hagley Road, Edgbaston, Birmingham.

Summer Competition (announced in July, p. 534).

A Prize of Two Guineas is offered for:

(1) *The best list of twenty English novels (excluding Scott, Dickens, Thackeray, Jane Austen, George Eliot, and all historical novels), suitable to form the nucleus of a school library for boys and girls of 17 to 19.*

Or,

(2) *The best list of twenty books, not stories, giving information and instruction in a light and readable form, suitable for boys and girls of 14 to 16. As wide a field as possible should be covered, and works on school subjects, e.g. history and geography, should be included.*

A competitor may essay both lists, but the prize will be given to the best single list.

Lists must be received by September 8th, and the result will be announced in the October number.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All Competitions must reach the Office by the first post on September 8, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.
